35 BUSHELS PER ACRE
was the yield of WHEAT

160 ACRES
FARMS IN WESTERN CANADA
FREE

On many farms in Western Canada in 1913, some yields being reported as high as 50 bushels per acre. As high as 100 bushels were recorded in some districts for oats, 50 bushels for barley and from 10 to 30 bushels for flax. J. Keys arrived in the country 5 years ago from Denmark with very little means. He homesteaded, worked hard, is now the owner of 320 acres of land. In 1913 had a crop of 300 acres, which will realize him about \$4,000. His wheat weighed 58 lbs. to the bushel and averaged over 35 bushels to the acre.

Thousands of similar instances might be related of the homesteaders in Manitoba, Saskatchewan and Alberta.

The crop of 1913 was an abundant one everywhere in Western Canada.

Don't Shoot Dollars Into the Strawstack

SAVE the grain. You worked hard to prepare the soil—to plant—to harvest. You wouldn't spill grain out of a sack or throw it out of a bin—why let it go into the stack?

Hire a Red River Special

It Saves the Farmer's Thresh 80%

Most all threshers depend upon grain to drop out. The Red River Special beats it out.

The Big Cylinder throws the straw, chaff and grain against the "Man Behind the Gun." This takes out 90% of the grain. The grain goes through the straw goes over, then shakers beat the straw.

Insist upon hiring a Red River Special.

Battle Creek, Michigan

Address by J. A. Everitt, President, to the Fifth Annual Convention of the Farmers Society of Equity, Indianapolis, December 16, 1913

Mr. Chairman, Delegates and Visitors:

As president of the Farmers' Society of Equity I am glad to greet you and welcome you to our city, and to this, the fifth convention of our society.

Our meeting, when its purposes are carefully considered, I believe, is an event of the most stupendous importance in the history of our country.

We have come together here to consider the vital affairs of American agriculture, and these things concern every man, woman and child in the country. Our purpose in coming together here is to decide what the fruits of the field, garden and orchard shall sell for and the terms on which the people off of the farms shall secure them.

Some people will say that it matters not what this convention resolves to do, or what prices it may declare the crops are worth—that the acts of this convention will have no influence on future prices. But they may be mistaken. While our present membership is not sufficient to exert enough influence to compel profitable prices for all the crops, I believe it is possible for this convention to produce conditions that will enlist a million or more farmers during the coming year and thus establish, completely, our system of marketing, when the producers of the crops will have ALL to say about the prices and terms of sale.

But if we are not able to do this in a year we need not be discouraged. We can take satisfaction from the fact that we are on the right track at last to solve the agricultural marketing problem. The realization of this hope is as certain as any human event can be, and, when it is realized, the world will have taken the greatest step forward since the beginning of the Christian era.

I will not take any time to prove to you that farmers have a marketing problem to solve, or that the world faces another problem—the one of how the people are to be fed in the future. Some people claim that the latter one is the greatest problem of the day. I will agree in this. But it is well for every person to realize that the solution of the latter problem depends absolutely on the former one being first solved. Every one admits that to feed the future increasing millions in our country and in foreign countries the acres farmed must produce more. But more than a hundred million dollars expended by our national and state governments each year for the past fifty years, for better farming and greater production, has not resulted in increasing the average acre yields a fraction of a bushel or a pound per acre. If it had not been for the immense areas of new soil put under cultivation each year our country would have ceased to be an exporting country many years ago, as it has approached that condition now and is, at this very time, becoming a heavy importer of many farm products that our farms are adapted to produce.

Why is it that the United States, originally having the most fertile land that God created, and enough land, if kept reasonably productive, to feed and clothe all of the people of the world, has ceased to produce a material surplus beyond feeding our own population and has become a heavy importing country?

We must blame the abominable, extravagant, wasteful, sinful marketing system, that has been in vogue, for this condition.

We have robbed the soil of its fertility and sold it for a bare existence. Every abandoned farm and every impoverished acre is a mute protest against the robber system and a con-

stant reminder of why we are rapidly passing from an exporting, wealth-accumulating nation to an importing, wealth-squandering one.

Realizing that this country had reached the point where it was not likely to produce enough of the necessities of life to support its people, under the present wasteful system, and not understanding the problems of the farmers and consumers of their products, the last Congress made a law that makes the markets of our country as free to the farmers in foreign countries as to our own.

If we needed one more thing to complete the demoralization of agriculture in this country and to bring our population face to face with prospective famine, as far as dependence on the products of our own farms is concerned, the lawmakers could not have selected a more certain way.

Pretended farmers' friends are constantly harping on the greater acre yields of the farms in France and Germany and Belgium and Italy and some other European countries. But don't they know that every such country protects its farmers against the cheap imports from other countries and this holds the prices high enough so that the farmers can, and they do, buy large quantities of fertilizers to return to the soil. Thus they not only maintain the average yields, but are increasing them.

I am not a high protectionist, neither a free trader, and this is not partisan politics. But I can not see how American agriculture is to get any benefit from this arrangement of opening up our markets to the farm products of the world. And whatever loss results to our agriculture our own farmers are indirectly responsible for it. If they would have had the right kind of an organization their own representatives could have been sent to Washington and shown Congress and the President that letting foreign farm products come in free would not decrease the cost of living, or increase our average yields, but would increase the profits of the millers' trust, the beef trust, the potato exploiters, etc.; that the way to increase our acre yields is not to cheapen the prices of the products of the acres, but to raise them, so that the profit will stimulate increased production. Nothing will stimulate production like selling the products for profitable prices.

Our whole economic plan in this country is wrong. We see how our farm yields have become less, and how it is impossible to increase them under the conditions that have prevailed. You might as well try to raise yourself by pulling on your boot straps as to increase the yields, or increase farmers' profits by the kind of legislation we are getting, or by the tremendous efforts being made to increase production, while the matter of marketing and prices is ignored.

And it is much the same with that other problem, the high cost of living. Laborers strike for higher wages and get them. What their employers pay them extra is added on the price of the goods and the consumer pays out his higher wages for the more expensive necessities of life. Or, the people get more money and spend it with the tradesman until he begins to show a little prosperity, when another man comes in the same neighborhood and opens up another store. Thus the trade is divided, there are two operating expenses to meet instead of one, the price of the necessities of life goes up and the consumer pays it.

Laborers think they get an advantage when they strike and win higher wages. But do they? Wages are

ENTERED AT THE INDIANAPOLIS, IND POST OFFICE AS SECOND CLASS MATTER, UNDER ACT OF CONGRESS, MCH. 3 1879

Vol. 17

INDIANAPOLIS, INDIANA, JANUARY 1, 1914

No. 1

Fifth Annual Meeting, Farmers Society of Equity

Held in Indianapolis, Indiana, December 16, 17, 18, 1913

DELEGATES from Oklahoma and the northwest began arriving on Sunday, December 14, and by Monday afternoon the offices at headquarters were full of valiant soldiers of the sod from near and far. The delegates at once gave evidence of the fact that they came with the intention of making this a convention of great business progress, and that they were capable of accomplishing their aims was immediately apparent.

Tuesday morning the retiring board of directors met in regular session in the offices of the president of the society. The directors present were J. A. Everitt, president; W. H. Mitchell, vice-president; Robert Stephenson of Indiana; S. W. Morris of Minnesota; J. A. Harmon of Oklahoma and C.

Hayes Taylor of Indianapolis. Those not present were W. S. Sure of Alabama, Fred N. Parkinson of Idaho and Jacob Bretz of Indiana. A. Y. Satterfield, bearing a proxy from Mr. Parkinson, was admitted as his representative on the board. The development of the society during the year of 1913 was taken up and the showing of an increase during the year of over 300 per cent in membership was very satisfactory to all members of the board, the principal sections of development being Washington, Oregon, Idaho, Nebraska, Minnesota, Alabama and Pennsylvania. Growth in other states, while not so great in volume, was nevertheless very creditable to the field workers in those states.

Discusses Federation

The board gave careful considera-

tion to the idea of federating all associations having a practical organization for marketing, and it was generally agreed that special effort should be made to awaken an active interest in the idea amongst the members of local and sectional marketing associations. A recommendation was made to the effect that the national convention be urged to take some actual step toward the accomplishment of some such plan. Mr. Satterfield expressed emphatically the opinion that such a movement, undertaken by capable men, would meet with instant and unvarying success, and gave in support of his views his own success in this identical line of work, having "federated" a number of local associations in the northwest with the F. S. E. during the past year.

It was the opinion of the board,

based upon the developments of the past year, that many, if not all organized farmers can be brought to a co-operative basis in the establishment and operation of a market system based upon sound business principles, and that no matter of greater importance could be considered by the delegates to the convention.

First Session, Tuesday, December 16

The delegates were called to order in the assembly hall of the Lorraine Hotel at 10 o'clock a. m., President Everitt in the chair, who at once delivered his annual address, which will be found elsewhere. Immediately following the address of the president, the committee on credentials made its report. The following states were represented by accredited dele-

Feb. 18. 1929

The New Year and the Old

TODAY we begin a new year. Yesterday saw the last of a year that is forever gone, except as it lives and will continue to live in memories. Its opportunities for achievement are as far from us as are those of the years that glided by in the lives of the ancients. How about the memories? With all of us they are made up of sorrows and disappointments, of regrets, of neglected opportunities, of attempts and failures, and of mistakes. But these have not made up the year. They have only been incidents in it, and to diminish their effects and lighten their burdens there have been periods of happiness, of pleasure in things said and done, of opportunities eagerly seized and made the most of, of successes to cheer and encourage us, and also apparently doubtful efforts, whose results proved the wisdom of the action. Such is life, and the question of its success or failure depends upon which is most abundant, the thorns or the roses.

The year 1913 has in many respects been a peculiar one. Over a vast area of the United States the farms have required the usual or even a greater amount of labor, but in spite of it all production has been below the normal, many crops bordering upon failure. This would naturally mean better prices to the farmers because of the scarcity, and to measurably compensate them for their losses, and up to this date that natural result has to a degree at least been manifest. But the nation's rulers have entered the arena, and, not so much to supply the deficiency, we may be sure, as to gratify well-known selfish interests that seem to hold the legislative ear, have thrown down the barriers that protected American farmers and have invited into our markets the free competition of the soil and pasture and feed-lot products of the world. In spite of our short production the effect of this is already being felt, sufficiently, at least, to show what the effect will be when we are blessed (or cursed, which is it?) with a year of abundant production. This is a problem the year we enter today may solve unless some counter action may be taken to turn aside the evils and save agriculture from a calamity it never before encountered.

The year has given birth to many other things that are new, at least new in their proportions. There never was so general, so wide-spread and so powerful an effort to encourage and secure more abundant farm production. A double yield is the slogan, and millions of money is staked to accomplish it. Good, says almost every farmer, and good say we; but this increased production, to be a benefit to the farmers, must be accompanied by increased consumption. There must be a market that will take it all at remunerative prices, or the efforts that bring the increase will result in loss to the farmers. Little is said on that side of the proposition, because these strange and mystifying efforts are not so much in the interest of the farmers and agriculture, nor yet in that of the consumers, as they are in selfish interests to be developed and improved thereby. The manufacturers, implement and machine makers and the

great mercantile concerns want to sell more stuff; the railroads want more freight to carry; the fertilizer trust wants the farmers to use and pay for more of their commodity; the packers want more meat-producing animals that they can buy at lower prices, and from which to get greater quantities of meat to store and sell to consumers at prices as high as before. The boards of trade want more products of the farms so as to make more doubtful prices and more uncertain market conditions so they may have all the better opportunities for gambling in price. One can easily see where these various interests come in, but without an assurance of demand and price where is to be found the benefit to the farmers?

In reviewing the year we mention these things as lessons to be studied by the farmers themselves. Meanwhile, we are glad to say the farmers have not been entirely idle. They have studied as they never did before the importance to them of the marketing of their crops. In many places they have put new methods into practice, and in every instance they have derived benefits therefrom not only for themselves, but for those who bought and used their products. But alas! the conservatism that holds the agricultural world to the old methods, the methods farmers learned in childhood days, and that cling to them as do the memories of the loved ones in the old home. This has made progress slow.

But today there is just as much of the new year ahead of us as there is behind us of the old year that is gone. What will the new year bring, and what will it see accomplished? It will bring its sunshine and its shadows, its sorrows and its joys, just as the other years have done. There will come with it opportunities for good that will be availed of and others that will be neglected. Let us all try during this year of 1914 to do the greatest possible amount of good, to win the greatest possible successes and to make the very fewest mistakes.

Specially let us see to it that the great business of farming be brought to that exalted plane where it belongs by its divine origin, by its indispensability to both the human race and the animal kingdom, and by the fact that the success of all other business depends upon its success. To bring farming to that plane devolves upon the farmers themselves. They alone take the broad view that success is not alone in production, but also in marketing, in selling, in supplying demand and in price, equitable alike to both producer and consumer. No one of the outside concerns that are promising so much propose anything in this important part of the work. But the farmers are seeing things in the greater light, and before the year we enter today has retired behind the closed door of the past, we shall see business on the farms as well as cultivation and production. We shall see as great crops produced as science and nature combined will make, and we shall see the products go to and supply the demand at prices that will pay the producers well, but that will not make greedy millionaires with conscienceless toll gates between the two.

God grant it, and give all of our readers a Happy New Year.

Still Worrying About the Price

BUYERS everywhere are still worrying about what they pay for things. Government departments send out bulletins every once in awhile telling how much more things cost now than the same things did a few years ago, and Congress is constantly wrestling with the problem in one way or another, but nobody seems near a practical solution. The fact is the trouble inter-

locks. It costs more to do business now than it formerly did, and for that reason profits must be greater, and to make profits greater prices must be higher. In the first place, merchants and clerks are at greater expense and they must have higher wages. In the next place, they do many things for their customers that they did not do a few years ago. Among other things we may mention the delivery of goods.

Such a thing was unknown in the memory of men yet living, but an enterprising merchant proposed, as a trade winner, to deliver to their homes the goods his customers bought. It was popular and the other merchants had to do the same or lose trade. Now it is the rule not only in the cities, but in the remote country villages. It involves expense, and that expense is added to the selling price and is therefore paid for not only by those who are served, but by those who live in the country and to whom no deliveries can be made. This is another case where the country people must pay for what the town people get. But this is only an incident. Other expenses are incurred, some warranted and others unwarranted, but all added to the selling price.

Another factor is that too many people have gone into business. Some years ago there was a general drifting to the farms, but for a number of years the drift has been strong the other way. As farm products were made the medium of cruel speculation, and farm prices were held down while consumer prices were forced up, the farms lost their attraction and the young people drifted to the towns and cities and sought business openings and opportunities, or made them. Every additional business man that entered the field was another individual, generally a family, for business profits to provide for, and it was another nonproducing person or family for the farmers, who are the main customers of the town and village merchants, to support in the price they paid for the goods they bought at the stores. Thus has the productive power of the rural population been impaired, and it has been perverted, misdirected, until we have reached, by gradual steps, the condition the producing and consuming world is now in.

But this is not all, nor is it the worst. Greed is an element of human nature. In some it is only reasonable and moderate and is under control. In others it is the ruling passion, is unreasonable, extortionate, unsatisfiable. That class of people has formed

combinations to gratify their insatiable greed by monopolizing the purchase of the products of the farm and also the sale of these necessities of life, exercising their power to force down the prices paid the farmers and to force up the prices charged the users. This terrible fact is beginning to be understood by the people, and protests are going up from many influential sources. Congressman McKellar, discussing a bill for the control of such market combines, called that class of people "voracious vultures of the market places" and the combines themselves "plunderbunds of the food sharks." Even these terms are not extravagant when we realize the effect such market manipulations have on the people, both the producers of foodstuffs and the consumers of them. Why can not the rulers see this terrible evil and prohibit it by law? Congress and the government are everlastingly enacting laws to prohibit or punish something people do, but this seems to be one of the things they dare not interfere with, and it goes on robbing producers and consumers alike.

Thus are built up the high prices so universally talked about and complained of today. Farmers must pay high prices for what they buy, and there is a reason. Eaters must pay high prices for what they consume, and there is a reason. The reason is not so much in a scarcity as in combination and manipulation. But there is a remedy. Readjust to some extent the methods of business, but, above all, have a different marketing system. Get the supply and demand closer together. Shut out the cruel greed that fattens upon the substance of all and has brought about a condition that alarms the world. If the government can not or will not do it, the people themselves can. The first sellers and the final buyers must get closer together. We know they can do it, and we have faithfully and persistently pointed out the way. Each day makes the road plainer. The recent great gathering in this city emphasized the fact of accomplishment, and the sun of success is getting above the horizon.

Labor Going to Waste

BY LABOR we do not mean work being done, but rather the capacity to do work. Waste labor has long been a problem. In the south, and in many northern cities, there is a great quantity of colored men, strong and husky, having great capacity for manual labor, but making no use of it. This labor not only fails to pay its own way, but it becomes a burden upon the working branch of society. And who bears the brunt of it? Not the wealthy, for that class can protect itself against it, and even if it donates to the support of the improvident through charity, the donations come indirectly from the class that creates the wealth.

Chicago is now again face to face with its annual problem of caring for its thousands of unemployed men, out of work and out of funds. Chicago, and doubtless other cities, become in winter a haven for a horde of hungry idle men. They find work in the country, on the farms, in the summer, but when the north winds blow they strike out for the cities, without money enough saved to tide them through.

Those who have investigated the problem declare these men are not "tramps." They know work and are not afraid of it. Just what to do with them is, first, a municipal problem the cities must face and wrestle with. Second, it is a problem that is of national importance, and should be so considered. It is also a farma problem, and this phase should be considered as well. Laborers are scarce on the farms in the summer and work is hard

to find in the cities in the winter. The farms want the men in summer—the cities do not want them in the winter. The burden of caring for those who do not work rests upon those who do, and winter itself brings to them burdens almost as heavy as can be borne, let alone this other unwelcome and unnecessary burden of providing for the homeless who fill up the cities with the first fall of snow.

This is a matter that calls for co-operation. Even in winter thousands of farms are calling for men, until the corn is all in the cribs, to say the least. These country workers should stay in the country. They are the ones to whom the "stay-on-the-farm" propaganda should be directed. They are the denizens of the towns to whom "back-to-the-farm" should be preached, even though they worked for their board alone until spring. Country communities should provide for keeping these men in the country, or at least in the country towns. In France club-houses are kept up throughout the country for their accommodation. Something of the kind could be adopted here. Moreover, this class of men are fair objects for mission work of the churches, country, town and city. Let them know society takes an interest in them and they will take more interest in society. Teach them the value of thrift.

Why not shunt some of this uplift crusade over on the roadway of that portion of mankind who travels a path that does not take him to a home where he is welcome—a home. He needs uplifting. The farmer does not.

Fifth Annual Meeting

(Continued From Page 3)

gates: Alabama, Idaho, Indiana, Kansas, Minnesota, Montana, Washington, Nebraska, Utah, Pennsylvania, Florida, Mississippi, Illinois, Ohio and North Dakota.

The convention heartily approved of the address as a whole and committees were at once appointed to undertake the work outlined therein. The personnel of the committees was as follows:

Committee on Credentials—C. Hayes Taylor of Indianapolis, Ind.; W. H. Mitchell of Hutchinson, Kas.; Robert Stephenson of Lebanon, Ind.

Committee on the President's Address—Dominic McGuire of Montana, A. Y. Satterfield of Idaho, B. F. Walton of Nebraska.

Committee on Minimum Prices of Farm Products—J. A. Everitt of Indianapolis, C. Hayes Taylor of Indianapolis, S. W. Morris of Rochester, Minn.

Committee on Market Representatives—L. H. Brochman of Parker's Prairie, Minn.; C. B. Lozier of Roberts-dale, Ala.; Ferd. Leutz of North Dakota, E. H. Rettig of Indianapolis, C. H. DeCamp of Idaho.

Committee on Federation and Organization—A. Y. Satterfield of Pocatello, Idaho; J. Harris Lenker of Sunbury, Pa.; B. F. Walton of Geneva, Neb.; C. Hayes Taylor of Indianapolis, Ind.; Dominic McGuire of Hamilton, Mont.

After appointment of committees (who immediately retired and entered upon the constructive work of the convention) the delegates indulged in a snappy and interesting discussion of general matters affecting the farmers of the United States and the particular problems of organization and co-operation of farmers for marketing. (We regret our inability to provide space here for a complete report of the forceful and illuminating talks made by the delegates from the several sections.)

The most important and vital matters were taken up by the committee on organization and federation. This committee deemed it advisable to make special recommendations of changes in the constitution and by-laws of the National Union. That these changes were believed necessary was proved by their adoption, almost without change, by a practically unanimous vote of the delegates of the convention. The changes of chief importance are as follows:

Membership Fees and Dues

The five-year membership was eliminated. Membership can now be for one year only. All five-year memberships previously reported will hold good, however.

The membership fee was increased by 50 cents, and members at large were placed upon the same basis as members of locals and hereafter can be admitted to membership only upon payment of the regular membership fee of \$2.50, which in all cases pays the dues of the first year and includes a subscription to the official paper.

The fee for county union charters was increased from \$2 to \$5. The fee for state union charters was increased from \$5 to \$10.

Organized Forms

Provision was made for the organization of district and sectional clearing houses in addition to the other organized forms. A district clearing house is organized by three or more locals and the business of buying and selling for the membership of all locals logically belonging to such clearing house shall be done by it. These district clearing houses may be formed by locals of one or more counties. They take the place of the county unions, but are not limited by county boundaries, as locals in adjoining counties may become members of the same district clearing house, with the permission of the next higher organiza-

tion. They shall be governed by a board of directors consisting of one member from each local. These directors shall elect an executive committee of three persons to have active charge of the business of the district clearing house.

The convention also authorized the organization of section clearing houses, which may include the local and county or district clearing houses in a section composed of a state or portions of two or more states, in order to centralize, as may be found advisable, the business of the members within any particular section, regardless of state boundaries. However, the scope and boundaries shall be approved by the national clearing house. Section clearing houses shall be governed by a board of directors elected by local or district clearing houses and the business management placed in the hands of an executive committee of three, chosen by the board of directors.

Read all the advertisements, and if you ever lose by one in UP-TO-DATE FARMING we want to know it.

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Service

For years this publication has endeavored to be of the greatest possible service to its readers in assisting them to market their goods to the best advantage.

We want all of our readers to know that we are trying to be of service to them in the advertising as well as the editorial columns.

Hardly a day passes that we do not refuse unreliable, fake or objectionable advertisements amounting to considerable revenue.

This is in line with our policy of "Service," however, and we are going to "stick to it."

Read all the advertisements, and if you ever lose by one in UP-TO-DATE FARMING we want to know it.

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

tion. They shall be governed by a board of directors consisting of one member from each local. These directors shall elect an executive committee of three persons to have active charge of the business of the district clearing house.

The convention also authorized the organization of section clearing houses, which may include the local and county or district clearing houses in a section composed of a state or portions of two or more states, in order to centralize, as may be found advisable, the business of the members within any particular section, regardless of state boundaries. However, the scope and boundaries shall be approved by the national clearing house. Section clearing houses shall be governed by a board of directors elected by local or district clearing houses and the business management placed in the hands of an executive committee of three, chosen by the board of directors.

Minimum Prices

The convention directed that the scale of minimum prices for farm, orchard and garden crops be left to the board of directors of the national clearing house, and they in turn placed the matter in the hands of the executive committee for further investigation.

Reincorporation

There was a strong demand on the part of a majority of delegates for making it possible to sometimes hold the national convention, or the annual meeting, in some other place than Indianapolis. The executive committee of the national board was given the authority and instructed to reincorporate the Farmers Society of Equity under a law that will permit the annual meeting to be held at any point in the United States selected by the representatives to the previous annual meeting. (The place of the next annual meeting, as selected by the representatives, is Pocatello, Idaho; the time to be determined by the board of directors.) This order does not carry with it any change in the plans or objects of the society, nor removal of headquarters.

Federation

The board of directors were instructed and authorized to provide a method for federating any local, county, district or sectional marketing association with the Farmers Society of Equity for the purpose of co-operating in marketing and fixing fees and dues for such federation.

Nomination and Election of National Officers

The following amendment was adopted as a substitute for Section 4 of Article VIII:

NOMINATIONS

Any member in good standing, and who has been such for at least one year, shall be eligible to election to any office in the national clearing house. Subordinate clearing houses (unions) may, by majority vote, nominate one candidate for each of the offices named. Such nominations must be

reported to the national clearing house on or before a date six weeks prior to the opening date of the annual meeting. These shall be the nominees. They shall be published in the official paper of the society in at least three issues immediately preceding the annual meeting.

ELECTION OF OFFICERS

The officers and directors of the Farmers Society of Equity, with the exception of the secretary, shall be elected by the organized local clearing houses and the federated associations. The members of such shall express their choices on ballots furnished by the National Union, or printed in the official paper or on other paper. Said ballots shall be sent to the national clearing house by mail, or they may be brought to the annual meeting by the delegates representing such local clearing houses or associations and voted in the annual meeting. The greatest number of votes shall elect, provided, it shall be found that the total number of votes cast shall equal fifty-one (51) per cent of the total membership in good standing. If such number of votes by ballot be less than fifty-one (51) per cent of the total number of members in good standing, then the election shall devolve upon the accredited delegates present at the annual meeting, who shall vote the number of votes to which they are entitled by representation and proxy.

The following amendment was passed as a substitute for Section 5 of Article VIII:

REPRESENTATION

The annual meeting of the Farmers Society of Equity shall be composed of representatives of subordinate unions or clearing houses, as follows:

Each local clearing house shall be entitled to one representative, each county or district clearing house shall be entitled to one representative-at-large, and one for each 1,000 members or fraction thereof in the county or district; each section clearing house shall be entitled to one representative-at-large, and one for each 2,000 members or fraction thereof in the section. In the event that it is impractical for any local clearing house to send a representative, it may join another, or more than one, to send a representative. In such cases the delegate shall have as many votes in the meeting as he carries credentials.

The above covers the most important work of the annual meeting. (A more complete report was authorized to be published in pamphlet form, which can be obtained by request.)

Officers for 1914

The officers elected for the next year are as follows:

For president, J. A. Everitt of Indianapolis; for vice-president, W. H. Mitchell, Hutchinson, Kas.; for national organizer, A. Y. Satterfield, Sterling, Idaho; for treasurer, C. Hayes Taylor, Indianapolis.

For directors, all the above and the following seven elected directors: W. Griesenthwaite, Oregon City, Ore.; S. W. Morris, Rochester, Minn.; J. Harris Lenker, Sunbury, Pa.; O. E. Scott, Pocatello, Idaho; David Holmgren, Tremonton, Utah; C. B. Lozier, Roberts-dale, Ala.; A. E. Weber, Geneva, Neb.

Meeting of the New Board

Immediately after the adjournment of the annual meeting the new board of directors met in regular session in the offices of the president and the work for the coming year was outlined. The deliberations were concerned chiefly with the actual work

of organizing, the marketing of farm crops, market representatives, reports, adjustments, claims, contracts and other details connected therewith. Plans were devised to obtain greater concentration and concerted action in marketing. The utmost care will be exercised in the selection of market representatives, so that efficient, honest service shall be assured, and a route as short as possible between producer and consumer shall be found. (The complete report will be in the pamphlet referred to.)

The Executive Committee

The executive committee for the year 1914 was selected. It is composed of President J. A. Everitt, Treasurer C. Hayes Taylor and National Organizer A. Y. Satterfield.

* * *

The success of this great movement is as certain as the coming of the days, and nothing can delay it but the indifference of the man at home, the farmer himself, who will produce the crops with which this great organization will do its business of building a greater prosperity. These men, the very foundation of all progress, must be loyal and earnest. The officers of the National Union are at your service. With your loyal support they and you can win every struggle against any and all opposition. Do your duty as one member—your duty to your own local—and the great organization will work ceaselessly and inexorably to do the will of its members and to bring a greater prosperity to all. Be loyal to your local. That is all that is necessary. Attend its meetings, elect the best men to office, abide by its will and, above all else, do business through it.

Now let us face forward and make strides!

Smile Awhile

Why They Don't

Gump—Why is it that the women don't tell their age?

Guy—They are all old enough to know they don't have to.

A Continuous Job

"Mrs. Pepper is certainly a tireless business woman."

"What business is she engaged in?"

"Everybody's."

Something Still Bigger

"Wife, I do think that new hat of yours is the biggest thing I ever saw."

"Never mind. You won't think that when you get the bill."

Qualified

"Do you believe in women holding office?"

"Sure I do. Some day I'm going to run my wife for Congress on her knack of introducing bills into the house."

Funny Side of Law

"That lawyer of mine has a nerve."

"Why so?"

"Listen to this item in his bill: 'For waking up in the night and thinking over your case, \$5.'"

If—But

If a man had 100 hens and each hen was laying an egg a day, and it cost 2 cents per day for the keep of each hen, and eggs were bring 7 cents each, how much money would—but what's the use? Not one of the blamed hens is laying!

Just So

"Dorothy," asked her aunt one day, "do you like to go to school?"

"Yes, ma'am," replied dutiful Dorothy, without the slightest hesitation. "I like going and I like coming back. It is staying there between times that sticks me."

Taken at Her Word

One morning, while Mrs. Cobb was at her summer home in the country, she decided to go uptown and spend the day with a friend. Her grocer had not called by the time she was ready to leave, so she wrote on a card:

"All out. Don't leave anything." And she tacked it on the door.

Upon her return at night she found the house had been ransacked and nearly everything of any value had been taken. On the card which she had left on the door these words had been added:

"Thanks. We haven't left much."

OUR MARKET REVIEW

Semi-Monthly Review of Crops Markets and Trade

BRADSTREET'S summary of the state of trade on December 20 is as follows:

Quiet. Wholesale and jobbing less active. Retail irregular. Mild weather retards seasonable goods. Holiday demand equals last year. Excellent winter wheat reports. Securities markets have better tone. More doing in pig iron. Price declines on steel resisted. Largest wool sales in months. Clearings larger than last week, slightly below last year.

From the United States Department of Agriculture we get estimates from which these deductions are made:

Fourteen crops that occupied 300,000,000 acres this year are valued at \$4,940,301,000. The value of these crops exceeds like crops of 1912 by 3.8 per cent, and 1911 by 7.6 per cent. In most cases the crops yielded less this year than in the other years with which we are comparing, while the total yield of the fourteen crops is far below the totals of either other year. And yet the exclusive greater crop teachers are abroad in the land.

Colder and more seasonable weather for wheat has prevailed part of the time over the belt since our former report; still the growth has not been stopped. Outside of the rank growth and the tenderness of the plant, which might be serious if very cold weather would come suddenly, the prospect is about the best ever. The acreage also is the largest ever. The visible supply change since our former report is inconsiderable against a five and a half million bushel increase the same period last year. There has not been much change in price, some markets being slightly lower and others slightly higher than two weeks before.

The corn situation is strong, although there has been some decline in prices. The decline has been the greatest in Cincinnati—about 10 cents a bushel. This is because there are fairly good crops in the Cincinnati

Old John Nutty accepts, without adulteration, the opinion that we must multiply our crops to increase our profits. O. J. N. is for the agricultural expert strong, but nothing doing for the F. S. E. system of marketing.

district and the buyers are taking advantage of the ignorance of growers and their willingness to sell. There is no valid reason why corn should be selling at Cincinnati at 86 cents when St. Louis, Kansas City and Chicago markets are 4 cents above.

Another liberal slice was taken off of the oats visible, but the market has not quite held the former advance at Chicago and St. Louis, but is unchanged to higher at Kansas City and Cincinnati.

Late reports on the cotton crop have placed the yield higher and prices have sagged badly, being nearly a cent a pound lower than two weeks before. The government report of the crop now stands at 13,877,000 bales exclusive of linters. Recent crops were: 1911, 15,692,000 bales; 1910, 11,608,000 bales; 1909, 10,004,000 bales; 1908, 13,241,000 bales; 1907, 11,107,000 bales; 1906, 13,273,000 bales; 1905, 10,575,000 bales; 1904, 13,438,000 bales; and 1903, 9,851,000 bales.

Much uncertainty prevails in the potato market because of lack of knowledge about whether the government is going to further open our ports to foreign potatoes or not, or close them entirely. With a short crop of potatoes and short crops of vegetables, growers thought they were in line to make back some of the losses of last year, when the crop was a record breaker. But prices have been gradually declining since September and are the lowest now of the season. European countries usually raise great surpluses of potatoes to be fed to stock and manufactured into starch and other products. With such prices as our own crop would justify this year those surpluses would come to this country. But the Department of Agriculture placed an embargo on potatoes from all European countries except Holland and Belgium. Imports have been coming from them. But with these two countries open it is easy to send the surpluses of some other countries across the borders and include them in the exports. Growers and handlers are anxious to have the question settled.

Advice

Wheat—Hold for higher prices or feed it. Great quantities of wheat, we are informed, are being fed in the states where the corn crop was short. Corn—Market gradually and when you can get prices well up to market quotations. Much corn is being bought up at under value. Oats—We look for higher prices. Cotton—Hold it if you can. Beans—Future prices uncertain because of lack of knowledge of the crops in Canada and other countries that can now ship in free of duty. Potatoes—Same as beans, but we'd hold until the question of the embargo on diseased potatoes is settled.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Dec. 13, 1913, with comparisons, are shown in the following table. (The plus — before figures means decrease, X means increase.)

	Dec. 13, 1913	Change from 2 wks. before
WHEAT	58,691,000	X 775,000
CORN	4,507,000	X 660,000
OATS	32,708,000	-3,740,000
BARLEY	8,639,000	X 612,000

The visible supply of wheat in Canada on the same date was 49,192,000 bushels. This is 1,030,000 bushels more than two weeks before and 5,688,000 bushels more than a year before. The visible supply of oats was 9,924,000 bushels on the same date, which is 866,000 bushels less than two weeks before and is 2,147,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Dec. 20, two weeks before and a year before as follows:

	Dec. 20	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	95 @ 96	95 1/2 @ 97	1.10
St. Louis	93 @ 94	95 @ 95 1/2	1.08
Kansas City	90 @ 91	92 @ 93	1.03
Cincinnati	88 @ 89	87 @ 88	1.13
New York	1.00 @ 1.01	1.00 @ 1.01	1.09
Minneapolis—Spring wheat—No. 1 hard, 97 1/2c; No. 2 northern, 83 1/2c@85 1/2c. Two weeks before, 97 1/2c@98 1/2c and 85 1/2c@87 1/2c respectively. A year before, 91 1/2c and 82 1/2c@83 1/2c respectively.			
CORN, No. 2 WHITE			
Chicago	70 1/2 @ 70 3/4	73 1/2 @ 74	47
St. Louis	70 @ 69	71 @ 72	43
Kansas City	70 @ 71	71 @ 71 1/2	48 1/2
Cincinnati	68 @ 67	70 @ 71	53
New York	74 1/2 @ 75	75	56
OATS, No. 2 WHITE			
Chicago	40 @ 40 1/2	42 1/2	35 1/2
St. Louis	42	43 @ 43 1/2	34 1/2
Kansas City	41 1/2 @ 41 1/4	41 1/2	35
Cincinnati	42 @ 42 1/2	41 1/2 @ 42	37 1/2
New York			40

Future Grain Prices

Chicago grain futures closed on Dec. 20, 1913, and two weeks before as follows:
Wheat—December, 88c; May, 91 1/4c; July, 87 1/2c.
Two weeks before, 88c and 91 1/4c respectively.
Corn—December, 69 1/4c; May, 69 1/4c; July, 63 1/2c.
Two weeks before, 72 1/2c and 71 1/2c respectively.
Oats—December, 39 1/2c; May, 41 1/2c; July, 41 1/2c.
Two weeks before, 40 1/2c and 43c respectively.

Cotton

New York, Dec. 20.—Cash cotton closed as follows: Middling uplands, 12.50c; middling gulf, 12.85c. Two weeks before the price was 90c a cwt. higher. A year before the price was 13.10c and 13.35c respectively.

Chicago Produce Market

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	57	50	78
Tuesday	45	48	70
Wednesday	40	58	82
Thursday	28	20	85
Friday	24	32	40
Saturday	26	40	61

Total, 6 days..... 220 248 807

Dealers reported a little more inquiry and a steady market at the recent recession in prices. Values show a decline of about 7c this week and this in spite of a reduction of 28 cars in total arrivals for six days. As compared with a year ago, receipts show a deficit of 87 cars, but the trade for the week has been more than proportionately restricted, and the meager supply was ample for requirements.

Sales reported were: Per bushel—Wisconsin Rurals in bulk, 1 car at 62c; sacked, 1 car at 64c. 1 car at 65c, 2 cars ordinary at 55c; Michigan, ulk, 5 cars at 60c.

Per bushel—Wisconsin round white or Burbanks, bulk or sacked..... 50@63c

Fancy Dusty Rurals shade over..... 50@60c

Minnesota..... 50@60c

Michigan..... 50@60c

Idaho Russets, fancy..... 1.00@1.10

NEW POTATOES—Sell slowly. Supply is moderate, but ample.

Barrels, Bermuda, reds, quoted at.....\$7.00

Hampers, Louisiana, red, held at..... 2.00

The price of Michigan and other northern potatoes is 10c to 15c a bushel lower than two weeks before.

Idaho Russets are practically the same as quoted two weeks before. Bermuda potatoes have declined 50c a barrel, while Floridas in hampers are quoted the same as two weeks before.

SWEET POTATOES—An easy feeling prevails. It is due to good supply. Trade quiet and slow today. This is about what is experienced usually at the close of the week.

Barrels—Illinois, depending on quality.....\$2.00@2.75

Hampers—Delaware..... 75@.85

Maryland..... 1.00@1.10

Jersey..... 50@.75

Illinois, common to fair..... 50@.75

Mississippi and Alabama selling only in a small way and quoted..... 90

The prices of sweet potatoes are a little better than quoted two weeks before. The price is 10c a bushel higher than a year before.

BEANS—It has been some time since it has been possible to learn of any change in this market. From the little said about it, the business, it seems, has been quiet lately. This is no more or any different than dealers expect at this season or just before the holidays. Arrivals have been very moderate, and there is no urging of sales. Quotable:

Pea Beans—Hand-picked, choice.....	\$2.15
Common.....	1.75@2.00
Medlums nominally about same as pea beans.	
Red Kidneys, choice.....	2.80
Brown Swedish, long.....	1.75@2.00
Round.....	2.00@2.25
Imported.....	2.30@2.35

The prices of all varieties of beans is the same as quoted two weeks before. A year before choice hand-picked pea beans were quoted at \$2.30 to \$2.35 a bushel.

HAY—Receipts, 1,283 tons. Prairie hay and low and medium grades of timothy hay in liberal supply and quiet. Demand light. Choice timothy hay firm. Inquiry good and offerings small.

Choice timothy hay.....	\$18.50@19.50
No. 1 timothy.....	15.50@17.00
No. 2 timothy.....	13.50@14.50
Iowa and Nebraska prairie.....	13.50@14.50
Illinois and Wisconsin prairie.....	7.50@9.00

The price of choice timothy hay is 50c a ton higher than two weeks before. There has been no change in the price of prairie hay. A year before choice timothy hay was quoted at \$19 to \$20 a ton.

BROOM CORN—There is a firm, but, at the same time, a quiet market.

	Change same period last yr.	Change from a year before	Change from 2 years before
WHEAT	X 5,695,000	- 270,000	X 9,963,000
CORN	X 45,000	X 550,000	X 1,269,000
OATS	-1,768,000	X 19,490,000	X 9,080,000
BARLEY	- 669,000	X 3,239,000	X 3,928,000

Per ton—Illinois corn.....\$150@160

Oklahoma..... 110@160

There is no change in the price of broom corn from two weeks before. A year before Illinois was quoted at \$120 to \$130 per ton. Oklahoma \$60 to \$100 per ton.

STRAW—Rye straw quotable at \$7@7.50, oat straw at \$7@7.50, wheat straw, \$6.50@7.

Rye straw is 50c a ton lower. Oat straw and wheat straw unchanged from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday	2,566	3,183	2,591
Tuesday	4,030	3,116	2,585
Wednesday	3,162	2,740	1,944
Thursday	2,846	3,063	1,844
Friday	2,604	2,213	1,669
Saturday	3,609	2,458	1,924

Total..... 18,817 16,773 12,827

Receipts April 1, 1913, to Dec. 20, 1913.....2,921,333 cases

Receipts April 1, 1912, to Dec. 21, 1912.....2,738,212 cases

Receipts April 1, 1911, to Dec. 23, 1911.....2,431,529 cases

Receipts April 1, 1910, to Dec. 24, 1910.....2,766,276 cases

A firm feeling exists, with quotations 1/2c higher for storage and a trifle stronger for fresh.

Receipts show very little increase for the week, but eggs are not coming forward as freely as expected, with the general situation rather stronger. To satisfy buyers wanting fresh eggs, receivers find it necessary to re-handle nearly every lot coming to market. The stock candied out and not strictly fresh comes into competition with storage and sells at a liberal discount and at irregular prices. Most of the eggs are mixed with held and stale eggs—cellar-held stock—and such will not satisfy the dealers who want the stock.

Miscellaneous lots, cases returned, 25%@30%.

Ordinary lots quotable at 28@29c.

Firsts quotable 31c. To bring quoted prices eggs must run largely to new-laid eggs, with not over 24 eggs loss to the case.

Seconds—In good supply and in fair demand. Quotable at 19@21c per dozen.

Refrigerator eggs are quotable firmer. A fair demand exists and the offerings liberal. April Firsts quotable 27c.

Extras quotable 27 1/2c.

The price is about 3c lower than two weeks before.

Fruit

APPLES—Dealers say the market for barrel stock is in good, healthy shape. Of common storage stock the supply has been reduced so that very moderate offerings remain. There are at present only small receipts. The effect of this is to put the market for cooler goods in a better position. Sales are fair both to local trade and for shipments through the country. The market for western boxed apples is a little quiet. From reports they do not appear to be selling so well as barrels. They remain steady, however. The prices remain without change either for barrels or boxes. Some quotations are:

Jonathans, \$3.50 to \$5.50; Northern Spys, \$3.75 to \$4.25; Ben Davis, \$3 to \$4.50; Baldwins, \$4 to \$4.25; Grimes' Golden, \$3.50 to \$4.50; Greenings, \$4 to \$4.25. These prices are for barrels.

Some prices on box apples from the west follow: Arkansas Black, \$2.25@2.50; Rome Beauty, \$1.75@2.25; Jonathans, \$1.75@2.25; Grimes' Golden, \$2@2.50; Delicious, \$2.50@2.75; Spitzenburg, \$2@2.50.

PRESIDENT'S ADDRESS

(Continued From Page 2)

higher than forty years ago and so are the things they must have. Isn't it true that it is as hard for the wage earner to make both ends meet, now, as ever before? I tell you until some revolutionary action is taken by the people, themselves, conditions will continue to get worse rather than better. Congress and Legislatures can not legislate happiness and prosperity. These are things that are not given to the people, but which the people must reach forth their hands and take them to themselves.

So it is my purpose to devote my address to the things that I believe we can do to hasten the solution of these two great problems. I believe the day when the farmers obtain their complete

industrial freedom and independence will mark the beginning of all good things for all the people. And while working out the farmers' salvation remember that everything we expect to do, and in fact all we can safely do, must result in equal benefits to every other class of people, every useful industry, every meritorious institution and every person doing a necessary and legitimate business.

Farmers, through the Farmers' Society of Equity, are contending for a fair share of the wealth they produce. If they are deprived of it all other classes must suffer with them. But give the farmers fair, profitable prices always and their prosperity will be reflected in the greater prosperity of all the people—merchants, bankers, manufacturers, professional men, laborers, etc. The accomplishment of our object—profitable prices—will mean more trade to others. The more agriculture weighs in the scale that measures profitable industries, the more other useful industries will be exalted and strengthened and benefited.

So the struggle we are in today is not altogether in the interest of the farmers, but for the good and welfare of every country community, every city, the whole nation and all the people. What I say is true. Then let us go forward with a greater zeal and let us plan our future work so that we will merit and get the hearty cooperation OF ALL THE PEOPLE to the accomplishment of our good objects.

I want to particularly impress on delegates here assembled that the farmers are on the right track now to complete a successful marketing machine. Let this be our single purpose. Keep on the right track. The organization that experiments with every scheme, or changes its course at every crossroad, is bound to become a wreck. The hound that tried to catch two hares at the same time caught nothing. The good marksman brings down the game because he held true to his aim. The monarch of the forest was felled by the sharp ax striking again and again at the same place, sinking deeper and deeper with each stroke. The man who succeeds in business selects his vocation and then sticks to it. The aimless wanderer never accomplishes anything. Our course has been mapped out, and as far as it has been followed it has brought us success and benefit. Then let us hew to the line and follow the charter way to the end, which I tell you leads straight to farmers' industrial freedom and independence. And I believe when we arrive at our goal we will have brought the world to the door of the glorious millenium.

I will enumerate some of the things that I believe this convention should give particular attention to:

First, let us take account of stock. I mean our facilities and our ability to prosecute our work to a speedy and successful conclusion. Second, let us view the field and see what old and new problems confront us, and decide on ways and means to meet them.

We will probably find, in making such a survey, that our scheme of organizing is not such as attracts the best men as organizers. This is mainly because of the uncertainty of compensation and oftentimes the inadequacy of compensation. Headquarters has commissioned in the year past probably 300 organizers, but comparatively few of them were successful—I mean very few of them became successful organizers. The results in this department were not commensurate with the effort made and the expense incurred. I suggest that a committee be appointed to consider the matter and report to the convention. I will make some recommendations to the committee and others will do the same. To organize there must be organizers. Organizers must be paid. Without good organizers, and many of them, this movement will languish and eventually may die. With enough good or

(Continued on Page 20)

The Why, When and How of Spraying

By F. E. Myers

THAT spraying is no longer an experiment, but a necessity to insure good fruit, is generally conceded by all having had experience in growing fruit in either large or small quantities, and interested in the question of better fruit. While it is true that trees may give some sort of returns even though totally neglected after planting, such practice is not worth while and certainly is not satisfactory to those dependent upon the returns of their crops and desirous of making them profitable. It is not to be inferred, however, that spraying operations are uniformly successful; in fact, this is far from being the case. Moreover, it must be understood that spraying is a protection and not a cure. Trees, unlike animals, are not cured of diseases by medical treatment and can not be made immune to insect or fungus attacks by previous treatment. But they can be protected, and that is the purpose of careful and diligent spraying.

In not a few cases it has happened that those once interested in spraying later were disappointed in the results and gave up the practice. Of all orchard work spraying is the most likely to be slighted or neglected, so that most cases of failure may be traced to the use of the wrong formula, to the failure to spray at the proper time, or to a lack of thoroughness of application. But spraying is not to be considered an exact science, as methods and formula should be adapted and modified to meet varying conditions. Moreover, the beginner need not fear that his trees will be ruined by lack of knowledge relative to the full and exact methods of preparing formulae, for only by gross carelessness or utter disregard of the simple directions and information herewith given could such results occur. The man who would be successful in spraying must learn to know the insects and diseases by their appearance and their work, so as to apply the right treatment at the proper time.

Two kinds of enemies attack fruit trees and plants, namely insects and fungus diseases. We spray to destroy insects and to prevent fungus diseases. For convenience, injurious insects are usually divided into two classes, based upon their feeding habits—eating or chewing insects and sucking insects.

Chewing insects are those having jaws by means of which they bite off and eat portions of the tissues of the plant, such as foliage, fruit buds, tender bark, etc. Examples of this class are the codling moth, which causes wormy apples, the plum curculio, the potato "bug" or beetle, caterpillars, etc. Most of the insects of this class are very easily controlled by applying Paris green and arsenate of lead, which is placed within their feeding range so be found by them sooner or later. It is with this class that success depends greatly upon spraying at the proper time; for example, the codling moth caterpillar may be killed if there is some poison on the apple just as the insect eats its way in, but after once getting into the fruit it is safe.

Sucking insects are those which pierce the plant tissue and suck out

the sap. Examples of this class are San Jose scale, oyster scale, aphids, plant lice, etc. These insects are safe from poisons because we can not get any poison into their food and must be killed by a direct application of such insecticides as will kill by contact, of which the most common are the lime-sulphur wash and oil emulsion. In fighting this class of insect very thorough work is required, for every individual insect must be hit by the spray.

Fungus diseases are growths of low form, which live on other living plants. Examples, apple and pear scab; black, brown and bitter, rot, mildew, etc. These diseases are disseminated almost wholly by the means of spores, which are extremely small, dust-like bodies corresponding to the seed of higher plants. These spores are produced in great abundance and each one is capable of starting a new fungus. They are carried from one plant to another by means of wind, water and insects. For fungus diseases, then, a spray is required which will kill the spores, and the important point is to commence spraying with fungicides before the disease presents itself, as spraying for fungus diseases is a preventative rather than a cure. For this purpose the combination of lime and blue vitriol, known as Bordeaux mixture, is the principal remedy. Here again thoroughness is of the utmost importance.

In connection with this article we give a spraying calendar showing some of the enemies of plant life, the plants they attack and the proper time for combating them, together with the methods and mixtures to be used. Because of the broad field this calendar covers it is not possible to give any more than general information and instructions. To be successful a knowledge of certain elementary facts is essential. Taking the life of the codling moth and dividing it into a cycle of four stages, we find certain periods when it is vulnerable and others when it is protected. The various stages are (1) when the egg is laid on or near the young apple, (2) the caterpillar or apple worm, which is hatched from the egg and which eats its way through the blossom and into the apple, this being the only stage in which the insect grows; (3) the resting stage, in which the caterpillar has changed to the pupa under the bark of the tree, and (4) the adult or moth stage, in which reproduction takes place and from which begins another cycle with the first stage of the egg. This clearly shows why we should spray poison for this chewing insect just after the blossoms have fallen and before the calyx closes for a period of about a week, so that the poison will be waiting for the caterpillar as it starts to enter into the apple and its first bite may be its last. If, however, the caterpillar should escape this first poisoning, the other

stages of the codling moth will follow and reproduction will take place, which explains the necessity of spraying again at later periods in order to destroy the second generation of the insects, which multiply very fast if left alone.

With the sucking insects, such as San Jose scale, treatment ought to be made when the trees are dormant, because of the caustic nature of the mixtures used. Thus spraying for the sucking insects should be conducted in the fall, after the leaves have dropped from the trees, when not freezing in winter or before the buds open in the spring. Fall and winter spraying has not been indulged in to any great extent in many localities, although much can be said in favor of these seasons, as the scale insects are not yet entirely dormant and the prevailing fair weather and usual slackness of work give better opportunities. However, the danger of injury to fruit buds and twigs, especially from the use of mineral oils and whale oil soap, is unquestionably greater and it is generally conceded that in the case of lime-sulphur wash, notably better results follow spraying late in spring, to insure as large an amount of spray on the trees as possible during early summer, and thus destroy any young scales from adults which may have escaped destruction. But in either late fall or spring there exists the advantage of

SPRAY CALENDAR

WHAT TO SPRAY	FOR WHAT TO SPRAY	WITH WHAT TO SPRAY	WHEN TO SPRAY		
			FIRST SPRAYING	SECOND SPRAYING	THIRD SPRAYING
Apple	Codling Moth ..	Arsenates in Bordeaux or arsenate of lead 3 lbs. to 50 gal. Lime-Sulphur	As soon as blossoms fall	7 to 10 days later	30 days later
	San Jose Scale.		Late in fall, late in winter or early in spring		
	Scab	Bordeaux Mixture	Just before blossoms open	Within a week after blossoms have dropped	Same 7 to 10 days later
	Woolly Aphis ...	Kerosene Emulsion	When trees are in full leaf	In fall	
Asparagus	Asparagus Rust.	Bordeaux	After cutting crop	10 days later	10 days later
Bean	Anthracnose ...	Bordeaux	On 2 or 3-inch plants	10 days later	After blossoms
Cabbage	Cabbage worm..	Pyrethrum	With first appearance of worms	Whenever worms are observed	Same
Cherry	Curculio	Arsenate of lead in Bordeaux	Before blossoming	As blossoms dry up	One week later
Cucumber	Cucumber Beetle	Arsenate of lead in Bordeaux	Soon as plants appear	Week later	Week after second
Currant	Worm	White Hellebore	When worms first appear	Repeat in 3 or 4 days	Répeat
Gooseberry	Worm	White Hellebore	As on Currants		
Grape	Anthracnose ...	Bordeaux	Just before buds open	Just before blossoming	Just after fruit has set
	Downy and Powdery Mildew and Rot.	Bordeaux	Just before blossoming	Just after fruit has set	7 to 10 days later
	Leaf Curl	Bordeaux	In fall or spring	As buds are opening	Just after calyx drops
Peach	Rot and Scab ..	Bordeaux	As buds are swelling	Just after calyxes drop	2 to 3 weeks later
Pear	Scab	Bordeaux	When leaves are half grown	After blossoms drop	
Plum	Rot	Bordeaux	As buds are swelling	Just after calyx drops	3 or 4 weeks later
	Curculio	Arsenate of lead in Bordeaux	With starting of buds	Just after calyx drops	5 days later
	Early Blight ..	Bordeaux	When plants are 6 inches high	Two weeks later	Two weeks later
Potato	Colorado Beetle.	Arsenites alone or in Bordeaux	When beetles or young appear		
Raspberry and Blackberry ...	Anthracnose ...	Bordeaux	Before leaves open	Repeat 1 week later	
Strawberry	Leaf Spot.....	Bordeaux	On new growth after crop	2 or 3 weeks later	
Tomato	Anthracnose ...	Bordeaux	Soon after fruit begins to set	Three weeks later	Three weeks later
	Leaf Blight....	Bordeaux	Three weeks after transplanting	Three weeks later	Three weeks later
	Watermelon and Muskmelon ...	Anthracnose and Leaf Blight ..	When plants begin to vine	2 or 3 weeks later	2 or 3 weeks later

the absence of foliage, thus permitting stronger and more thorough applications than during the growing seasons. And thoroughness is the prime essential in making these applications, covering every part of the tree from top to bottom, as only those insects coming into actual contact with the spray are killed.

With the fungus disease, spraying is more particularly a preventive measure and should be done when the trees are dormant, or while the spores are existing on the outside of plants, in order to destroy those fungus seed spores that have held over and before they have taken root, when they can not be controlled. Caustic washes are used and should have their causticity neutralized if used while the trees are in foliage. About 70 per cent of fungus difficulties are upon the under side of the leaves or twigs, and when spraying for this disease this should be borne in mind, so that every part of the tree can be reached. If spraying when the trees are in foliage, the spray should have sufficient power to temporarily displace the leaves in order that the spray will strike every part of them.

The study of plant insects and diseases, their life history and habits have shown three requisites for applying the sprays effectually—namely, intelligence, timeliness and thoroughness. Intelligence should be shown not only in the study of the enemies of plant life and their habits, but also in the preparation of the mixtures and application. For instance, it is better to spray on a still day, or, if there is a wind, to attempt to spray only the windward side of the trees so as to allow the spray to be carried through the trees, leaving the other side of the trees till the wind changes or dies down. Spraying should not be done at the time of heavy dew or when the trees or foliage are wet, but preferably on a bright, sunny day, because the liquid part of the spray will then evaporate more rapidly and it will be possible to obtain a more thorough and even distribution of the poison than is possible when it evaporates slowly, as there is less likelihood of the material running together into large drops and escaping. Where this occurs a very large proportion of the poison is soon lost. Never spray a tree till it drips. By timeliness we mean the application when it will do the most good, as every delay is of advantage to the parasite. It is thus advisable to be always ready for action, and, when the time comes, spray. Thoroughness will bring its own reward. It costs much more to do a poor job than to do a good one. When spraying a tree spray it well, as insects can not be expected to hunt for the poison. After the work is finished you should have the feeling that it is well done and entertain no fear as to the result. It is, therefore, quite necessary for thoroughness that the proper outfits and accessories be used.

The application of spray mixtures necessitates the use of force pumps, which can maintain a high pressure in order to produce a mist-like spray through the nozzle. Consequently spray pump may be divided as follows on the basis of efficiency: (1) Atomizers and other like devices known as "hand" sprayers, for spraying house plants and small plants in the garden; (2) pumps adapted for small gardens and orchards; (3) pumps for general orchard and field work where the trees do not reach too great a height; (4) large pumps, operated by gasoline and other power and adapted to any class of work, but designed especially for extensive orchard and park work. In all of these classes are included the same pumps, used for painting and whitewashing purposes and applying disinfectants to buildings and animals according to the extent of the work required of them.

1. The atomizers are the cheapest and simplest of efficient pumps. They are made in brass or tin, throw a fine short-distance spray and meet a requirement for spraying low vines and bushes and applying disinfectants.

2. In this class are included bucket and knapsack pumps. The bucket pumps are constructed so as to be clamped to buckets or tubs, which can be carried about from place to place. Others are fitted with foot supports, by which they are held steady when being operated, and which permits them to be taken out of the bucket readily. Another style shows the pump mounted on a galvanized bucket. These pumps are suitable for applying any of the liquid spray with good pressure, having large air chambers and being operated by the straight handle or lever so that the work is all done on the down stroke. These pumps are especially adapted for small orchard work where the trees are not over ten to fifteen feet in height.

The knapsack pumps are made in galvanized iron and copper. These are carried on the back of the operator, who can thus pump and direct the spray at the same time. These pumps are especially adapted for small orchard and garden work where the trees or bushes are not over ten to fifteen feet in height.

3. In this class are included the various barrel pumps. They are made to attach to the barrel. These pumps are operated by hand and will supply adequate pressure for two leads of hose. Although primarily designed to be used with a barrel, they may be fitted to a tank or other receptacle. The hydraulic spray pump, used very extensively for applying paint and whitewash to buildings, is fitted with a large air chamber. The liquid is forced into the air chamber under pressure by means of check valves. It is discharged through the nozzles by the force produced by the cushion of compressed air, which may be maintained for several minutes after the pump stops. These barrel pumps are used in large orchards, being placed on a wagon or care or fastened to a sled or drag.

4. In this class are found the power sprayers operated by gasoline, engine or other power. They are double acting and capable of producing extra heavy pressure, so that two leads of hose with double and triple nozzles can

be used with them. They are adapted for spraying on a large scale in connection with tanks holding from 150 to 300 gallons. Half-round and rectangular tanks are made to replace the wagon bed on the trucks.

There are several accessories to spray pump outfits which are indispensable, or of great convenience. Extension rods are necessary to reach the higher parts and inner branches of trees. They are of two kinds—simply small iron pipe or bamboo canes with brass lining. The latter are light and more rigid. These should be fitted at the base with a quick-acting shutoff cock to shut off spray when going from one tree to another.

In conclusion we wish to add a few suggestions to follow in the selection, use and care of spraying outfits. First, remember that in spray pumps, as in everything else, the best is always the cheapest in the end. Do not expect to get a serviceable pump for a low price. Use good hose if it does cost more. The length for working on the ground is from twenty-five to fifty feet, sufficient to permit spraying a tree from all sides. The hose for tower work may, of course, be shorter, as ten to 12 feet. Saving in cost between high-grade and low-grade materials for mixtures is no economy, but simply wilful extravagance. Never put a spray pump away, even for the night, without washing it by first pumping clear water through it until it is clean, then a bucket of water to which has been added one pint of machine oil. Use common machine oil freely on all working parts. The nozzles should also be cleaned when through spraying to prevent caking. Use a pressure gauge and keep up a good spraying pressure. Keep all valves and connections tight so they will not leak. Keep mixing plant and materials as near to where the work is to be done as possible to avoid unnecessary delays. Always have before you the purpose of your work and success will result.

Seems So

"Isn't that girl stuck on herself?"
"One would think so to see how she sticks to the mirror."

Shorty's Shortcuts

(By Himself)

UNDERSTAND this number of your paper, Mr. Editor, is to be a preachment on the text, "Now Let Us Spray." Shakespeare once made himself famous by saying "to spray or not to spray, that is the question." There is no doubt but what Mr. Shakespeare was more or less filled with wisdom, for the spray question is with us yet.

Now, to my mind, every boy and man of us should have been taught all about this spray business in our school days. You see, there's a lot of us who never studied Shakespeare, but we all studied grammar. Yes, sir, Mr. Editor, grammar is the proper study for this spray business. When we get to the study of verbs, and come along to juggling them, or conjugating them, or whatever it is, you remember we say I work, you work, they work, he works, she should work, it ought to work, or something like that. Well, right in that chapter and verse is where the novelist who wrote the grammar ought to have put in the spray dope, like this:

Once upon a time there was a hayseed who owned an apple tree, which had a habit of bearing a few apples now and then. Some had warts and some had worm holes and some scales, and others that ought to have been there were absent, and we heard the voice of the farmer lifted in lamentations, mourning because they were not. Just then came a voice from the experiment station saying, "Let us spray." And the farmer said, "I may spray, I mout spray, I might spray. How many shekels will it cost?" But the farmer forgot it, and again came a voice, from the Farmers' Weekly Guider and Goad, saying "Now is accepted time to spray," and the farmer, the hayseed farmer, said: "I can spray, I ought to spray, I will spray, by gum!" But he did not. Like old Pharaoh of Egypt, he hardened his heart, case-hardened it, in fact, and would not let them go (meaning his shekels). In the fall his apple tree brought forth some fruit, but more of it was not brought forth, and what was brought came ring-streaked and striped, with carbuncles and bone spavins, which even Susan, the Poland China sow, discriminated against. The farmer complained loud and long with exceeding strong complaints, and very bitter, like Job, who got sore on his circumstances. Then the thrifty neighbors all sang praises, like this: "We sprayed, they sprayed, it should have sprayed," meaning the farmer by "it," which was a little "it" and not a big "IT" by any means. Then said the farmer: "By the time another crop comes around you will have sprayed, I will have sprayed, we all will have sprayed, and our trees shall know the scab and the scale no more. The worms shall be worms in the dust, not in the apple." And it was even so.

Now, my wife says I've got my lessons mixed, and declares I've mixed up the Bible and the fairy book with the grammar. Perhaps she's right about it. It's been so long since I've read any of them it's hard to remember just where these things are found. But in case she's right I think I've improved on all of them, for I've got the right WORDS and the right WORKS and the right IDEAS all in one chapter.

So let us spray.

When I bought this farm wife and I picked it out on several counts. One of them was that it had "orchard enough for home use." Counting the trees, it seemed so. Counting the apples, cherries, pears and plums we got, it seemed not quite so much so. We didn't get much fruit, and what we did get would disgrace any man's cellar. I didn't want to wait for a new orchard to grow, and I didn't have to. I got a pruning hook, a grafting book and a spray pump and went at it. Working

SUPERIOR GRAIN DRILLS

All Castings Warranted Free from Flaws. "Even Sowing Means Even Growing."

Superior Drills sow all known seeds—none too large; none too small. "The name tells a true story."

You run no risk in buying a SUPERIOR Drill. Strongest Warranty ever placed on a grain drill. The Superior will do you work the way you want it done. over an old orchard is one thing we begin at both the top and the bottom. My wife got me into it and the experiment station helped me out, and as a result I had good fruit the first year, more good fruit the next, and since then every year the north pole didn't take a late poke at my trees I have had fruit in plenty to eat and some to sell. My hogs don't know the taste of an apple, for what few culls we have go into the vinegar barrel. There's many a "home orchard" that can be made to supply home needs and yield an income from sale of surplus fruit by the intelligent use of the pruning hook and the spray pump, in a year's time.

I use my spray pump to whitewash the henhouse and the cow stable, and the woodshed and the board fences. I use it to spray my hogs to keep away vermin, and the hoghouses and pens to keep out disease germs. And I want to say, when getting a spray pump, get a good one. Money invested in cheap spray pumps is soon gone glimmering.

Oh, yes, I spray my cows every fly time, once daily, with a good fly repellent.

Spray pumps? I'm for 'em, every time. **SHORTY.**

SOIL FERTILITY AN INFLUENCE IN SPRAYING

Recent years have seen great development in the practice of rejuvenating old orchards that have not been producing satisfactory crops of fruit for many years previous. Several experiment stations, and notably the Ohio Experiment Station at Wooster, have been experimenting along this line, in co-operation with owners of such orchards in different sections of the state. These experiments have been very satisfactory. There are today hundreds of old, decrepit orchards in different parts of the country that might be made to produce greater and more profitable crops of fruit than their owners even imagine is possible.

Spraying plays a very important part in the rejuvenation of orchards, yet spraying alone will not always give beneficial results unless other conditions are made favorable to the influence of the insecticides and fungicides used. The soil of an orchard may be in such a condition that the application of a spray otherwise very beneficial will be most injurious. For instance, on account of a very poor soil the trees of a certain orchard were weak from lack of nourishment and the usual prevalence of fungus diseases. An application of the Bordeaux mixture caused almost total destruction of the crop by russetting the newly set fruits and a loss of foliage ranging from 40 to 75 per cent. With a good, fertile soil, under proper fertilization, these trees would have had sufficient vitality to have made the use of the Bordeaux an improvement instead of a detriment. On the other hand, commercial lime-sulphur was used on certain trees under the same condition and with the use of this spray there was no injury to either fruit or foliage, and moreover this material clearly exerted a wholesome, invigorating effect. In the orchard of I. T. Lewis of Porterfield Station, O., a comparison of the Bordeaux mixture with lime-sulphur spraying was made in the season of 1911. The physical condition of this orchard was one far removed from one of health and vigor on account of low fertility of soil. The orchard embraced five rows of trees and each row originally contained fourteen trees. The orchard was divided into two parts and one sprayed with lime-sulphur and the other with Bordeaux. There was considerable dropping of fruit and injury to foliage on the section sprayed with Bordeaux, while there was no such injury on that part of the orchard sprayed with the lime-sulphur solution. The general result was striking and most remarkable. The two sections could be distinguished as far as the orchard could be well seen, the line between them being clearly defined. The trees of the lime-

sulphur application burst their buds and pushed out vigorous foliage within a very short time, from three to five days in advance of the trees in the Bordeaux part. The profusion of strong blossoms covering the trees uniformly was in sharp contrast to the bloom of the trees of the Bordeaux plot, which opened tardily, gradually, scattering and unevenly.

Soon after the petals dropped it was evident that both plots had set a generous crop of fruit, so much so that it was plain to be seen that thinning would be necessary if a good commercial article was to be made possible. In late June the thinning was undertaken, leaving fruits a distance not less than eight inches apart on a branch. When the work of thinning was undertaken it was found that nearly three times as many apples had set on the lime-sulphur plot than on the Bordeaux, making the work of thinning on the lime-sulphur plot much in excess of the same work on the Bordeaux plot. There was a difference, however. The lime-sulphur plot was very uniformly loaded with fruit, while the Bordeaux plot was heavily loaded in some portions and very thin in others. The conclusions to be gained from this would tend to the opinion that in order to obtain a uniform set, even at the expense of some extra work in thinning, the lime-sulphur solution is superior to the Bordeaux solution in early spraying of orchards planted on thin or impoverished soil.

An interesting experiment was made in regard to sooty fungus which developed on both the fruit and foliage of a row in this orchard that was not sprayed at all. Considerable sooty fungus developed on this row, while on both the Bordeaux and lime-sulphur sprayed plots no trace of this disease was to be seen, demonstrating in no uncertain way that lime-sulphur is equal to Bordeaux as a preventative against this disease.

It is clear from this experiment that in bringing back an old orchard to profitable productiveness it would be bad practice to use Bordeaux on such trees if the soil is in poor condition. It would be far better first to bring up the fertility of the soil, if for any reason the Bordeaux spray might be deemed necessary.

"Pat, do you see that gallows standing yonder?" asked a lawyer, who was riding with an Irishman near where an execution had recently taken place.

"Sure Oi do," replied Pat.

"Where would you be if the gallows had its due?" the lawyer asked.

"Faith, an' Oi'd be ridin' along here by meself," said Pat, without a moment's hesitation.

The Energizer of Business

In a metropolitan power-house there must be generators large enough to furnish millions of lights and provide electrical current for thousands of cars and factories.

Each monster machine with the power of tens of thousands of horses is energized by an unobtrusive little dynamo, which is technically known as an "exciter."

This exciter by its electric impulse through all

the coils of the generator brings the whole mechanism into life and activity.

A similar service is performed for the great agencies of business and industry by the telephones of the Bell System. They carry the currents of communication everywhere to energize our intricate social and business mechanism.

United for universal service, Bell Telephones give maximum efficiency to the big generators of production and commerce.

Our Country Contributors

Semi-Monthly Prize Letter Competition:

First Prize \$3.00 Second Prize \$2.00 Third Prize \$1.00

This department is designed to induce subscribers to contribute accounts of their farming experiences, their most profitable crops, or their ideas on any subject of general interest to farmers. Every farmer is invited to contribute an account of his most profitable crop, telling what made it so, in figures and facts. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell your story in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, UP-TO-DATE FARMING, Indianapolis.

MY MOST PROFITABLE CROP (First Prize)

For several seasons we had been having poor results from our sweet peas and had about decided to give up trying, but as we are very fond of them we finally decided to make a special effort to grow some nice ones.

With the best seed we could buy, and the soil very heavily fertilized and carefully prepared, we planted a single row fifty feet long. They started very nicely and when about a foot high I mulched them heavily with horse manure about two feet on each side of the row. It required a good-sized load of manure, which seemed extravagant, but how these peas did grow.

As this mulch was put on before the hot, dry weather set in, it kept the soil cool and moist better than any amount of cultivation would have done. It also kept the weeds down. The peas began blooming early and such a profusion of colors and richness I think I never saw.

We had given away several large bunches when one day a friend from town stopped at our place and went into ecstasies over them. He suggested that they could be sold easily in town. As I had my hands full with my berries and vegetables, I did not seriously consider the suggestion until our 11-year-old boy offered to sell them.

He and his mother cut and bunched them. Then as I went to town with my produce he would take his baskets of flowers and sell them along the best residence streets, then meet me down in the business section.

The first cutting was sold July 6 and he went in regularly every Tuesday and Saturday until August 31. He could have sold a few more, but his school began September 2.

We kept a careful record of each day's sales, as the boy and his mother were dividing the profits. The total income from that fifty-foot row was \$24.25.

I consider this at least one of my most profitable crops, not so much because it is the most money we ever received from so small a space, but because it taught us anew the value of thorough work and of the mulching system. Because it taught the boy, who had never undertaken anything of the kind before, the value of neatness, politeness and promptness in business, to take orders and then be careful not to disappoint his customers, to keep his record and handle money carefully and many things he could not get from books. And because, cutting the flowers as we did, regularly twice a week, allowing no seed to form, we had more flowers for our own pleasure than we ever had before.—B. V. E., Pennsylvania.

MY NEIGHBOR'S MOST PROFITABLE CROP (Second Prize)

Enthusiasm concerning turkey culture has seized me and I want to tell the UP-TO-DATE readers about my neighbor's "most profitable crop" of these fowls. Last Spring Mrs. S. purchased six bronze turkey hens and one tom of the same variety. They cost her \$15. She set most every egg those

six hens layed, which was 344 in all. The first eggs were hatched under chicken hens and she allowed her turkeys to set only once, in order to receive the more eggs from them. During the season she had 308 live turkeys hatched off and out of this number 282 have been raised to maturity. During the Thanksgiving market my neighbor disposed of all but fifty late turkeys at about \$2 each, and the remainder of her fowls she expects to put on the Christmas market at about the same figure. Doesn't \$500 for a crop of turkeys sound big? I would not believe it if I did not know it for a fact, but that is exactly what Mrs. S. is going to receive for the small amount of time and little care she has given her fowls, as they made their own way after the first two weeks. Until they left the coops their daily food consisted of stale wheat bread crumbs and clabber cheese, but after that they fed upon the grain in the fields, insects and whatever a bird may find to eat. Some of her friends attribute her success to the early diet of the young turkeys, others to the dry season, which is said to be the very best for raising these fowls, but I only know that I am going to try my luck in this profitable industry next year. If one woman can make a clear gain of \$500 in one season at an occupation that does not interfere with her other work, why can not others?—Mrs. H. H. S., Illinois.

TWO FIELDS OF CORN (Third Prize)

I was working for a farmer seven years ago, who had more land than we could handle to advantage. Ten acres were rented to a neighbor for corn. We thoroughly prepared our soil, as also did the renter. The renter planted his corn February 22 and we planted February 25. The weather being favorable, the corn grew fine. One afternoon by employer, the renter and myself went into the fields to take a look at the crop. The corn was then about three and one-half feet tall.

I made the remark that we ought to begin "laying by." The renter said I was crazy to have that small corn "laid by." Just the same, Monday morning we began to lay by our corn, and in a few days completed the job. Two days later a good rain came, and as soon as it got dry enough I went through again with a small steel harrow, making a dust mulch in the row middles. Talk about corn growing! It did GROW. Sixteen days after we began laying by ours the renter came to lay by his. I told him he was too late and would do more harm than good by laying by corn then.

He replied "No, no. My corn is big now and when I get through with it it will stay clean." It did stay clean, but that was all. A drought set in, dry and hot, day after day. Our corn kept on growing and stayed green. The renter's crop soon began to dry up and turn yellow. He had plowed his corn too late, tearing most of the main roots. Our crop produced twenty-eight and one-half bushels per acre and his only eleven bushels, nubbins at that. That was his most profitable crop, while yet it was not. It taught him a lesson. You can rest assured he has as good corn as the next one now. I hope

other farmers may take this as a lesson and make a profitable crop at the outset.—South Texan.

P. S.—UP-TO-DATE's work for the farmers' rights is grand.

MIXED CHICKENS AND MOLASSES COOKIES

I want to tell you how I buy clothes, school books, and help to feed my four children and myself.

I keep about seventy-five hens and sell eggs and chickens. At the present time my chickens are pretty well mixed. I tried thoroughbreds, but they did not lay as well as I thought they ought.

My best layers are the cross between the Rhode Island Red and the Plymouth Rock. It is a beautiful black, medium-sized hen, with a few brown marks on her neck and a bright red comb.

The pullets begin laying at seven months of age, and lay well all winter. They set early in the spring and make the best of mothers. They rest the shortest time after moulting of any kind I ever tried. The hens are laying well at the present time, and eggs are at a very high price.

I feed my little chickens corn bread until they are three weeks old. After that I like to feed wheat until they grow large enough to eat corn.

I have never kept an account of the eggs and chickens I sell, but I never have to ask for spending money. I live on a little farm and the chickens pick up a great deal of their living that would otherwise be lost.

I save all I can, by picking the wheat that gets spilled around the thresher that is too dirty for market, for my little chickens the following spring.

I also rake the wheat out in the field where the shocks were. In this way I get a great deal of good feed that would be plowed under.

As Christmas will soon be here and we want to do a great deal of baking, I hope it will not be out of place to send along my tested recipe for molasses cookies: One cup of sugar, two cups of molasses, a scant cup of butter or lard, two eggs, three teaspoonfuls of soda, one teaspoonful of ginger, one teaspoonful of cinnamon. Flour enough to make a dough that will roll nicely. Cut out and bake in a quick oven. Especially fine if iced.—Mrs. J. Y., Missouri.

CELERY A PROFITABLE CROP

My most profitable crop this year was celery. Many farmers' wives think it difficult to raise celery, not having made an attempt and hearing that it must be thoroughly bleached, a process which to the inexperienced portends much time and labor.

Early in March the seeds are planted in a box and placed in a warm place, where they can have plenty of sunlight and they require plenty of water every other day.

About the last of April I transplant to the garden, planting about six inches apart in a soil which has been well fertilized.

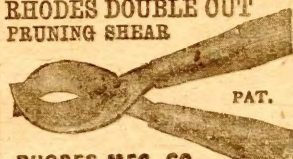

To have early celery, I start bleaching it when the plants are from eight to ten inches high. For bleaching I take two boards of about the same width as the plants are tall, eight or ten inches, placing the boards on each side of the row, driving in stakes to hold them closely together at the top, so it will bleach evenly. I do not remove the boards at all, but take the celery out by cutting off at the roots for our own use and taking from one end of the row for the bunches to be sold.

For the late celery, which I plan to have for the winter, I do not commence bleaching until October. By this time the plants, with good care (in extremely dry weather they require much water) should have grown well and have heavy stalks. It should bleach slowly

International Harvester Oil and Gas Engines

Here is an engine that you can use on your farm.

International Harvester engines are the best your money can buy. Once bought, they begin to save money for their owners because of the good materials they are built of, their expert design and construction and their exceedingly long life.

International Harvester engines are simple, powerful, easy to run, and seldom need repairs. Their popularity is based on many strong points like the following: Accurately ground piston and rings, offset cylinder head, split-hub fly wheel, detachable valve guides, etc. The line includes all types and styles, using both low and high grade fuels and ranging in size from one to sixty horse power.

Write us for interesting catalogues. When we send them we will tell you where you can see International Harvester engines.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(Incorporated)
Chicago U. S. A.

and will be more tender than when hurried too much.

Before the killing frosts come I dig it up, taking the root with as much of the dirt as I can keep around them. In our vegetable cellar, which is cool and dark, I put sand and dirt mixed. Into this I put the celery, roots down. The roots, not the plants, should be thoroughly watered once a week. Celery will keep in this way all winter.

I had celery to sell during the months of September and October, realizing in all \$9.30. For the smaller bunches I received 5 cents and for the large ones 10 cents. I expect to sell a couple of dollars' worth at Christmas time and we have had celery for our own use since August.

Considering the little time and expense—which was very small—expended, I consider this to have been my most profitable crop this year.—Mrs. Maud Conley, Lawler, Ia.

MARKETING THE SMALLER PRODUCE

A farmer living about ten miles from a city, in looking over a paper, found that the city consumers were paying much more for produce than he received for it. He was an up-to-date farmer and a man of ideas as well, so he began to look around for a plan by which he could sell his butter, eggs and other products direct to the users. Such a plan must be both handy and cheap. Just then the parcel post came. This offered the chance to the farmer, who seized the opportunity. A small advertisement was put into the city papers advertising fresh butter and eggs. Several persons replied and he immediately made an agreement to supply eggs and butter every week by parcel post at an equitable price which they both agreed upon. The farmer went to the city once a

month to collect. The plan worked admirably. The farmer had a number of wooden boxes made, very light weight, each of which would hold two pounds of butter and a dozen eggs. The eggs were wrapped in paper and put into the box, then cotton was packed between them. The butter was wrapped in waxed paper, put into thin pasteboard boxes. The empty mailing boxes were collected by the farmer on his monthly trips to the city. This is a case where one or two small advertisements eventually found a good market for all of one farm's butter, eggs and vegetables.—R. H. Hughes, Ohio.

CABBAGE, TOMATOES AND COW PEAS ALL ON THE SAME GROUND

The 1st day of March we set out 800 cabbage plants in long rows across our garden. We then covered the ground with chicken droppings. We tried to keep the soil well stirred all the time, to keep down weeds, to retain the moisture and keep the land mellow. Some of the cultivation was done with a plow, but a great deal of it was done by hand, using a tool with four prongs, called a potato hoe. After we commenced cutting the cabbage, tomato plants were set between the cabbage rows. At the last working of the tomato plants we sowed cow peas between the rows, the cabbage having been all cut by that time. Chicken droppings were scattered over the land several times and a little fertilizer used. We sold \$16.59 worth of cabbage, gave away at least \$5 worth, besides having all we could use. The lower leaves and trimmings were fed to our fowls and pigs. We did not keep a strict account of the tomatoes sold, but they did as well as other patches where no early crop was raised. The peas made fine feed for our Jersey heifer. We think it is so much better to raise two and three crops on one piece of land than to raise some vegetable early and then a lot of weeds.—Mrs. D. S. Hankla, Virginia.

COW PEAS IN THE CORN

I planted seed of the "sugar" crowder variety of peas in an acre and a half of corn, putting the seed in the corn planter. The corn was cultivated regularly, but I kept out all the weeds and grass from the plot when the peas were growing with the hoe. By August the vines were fairly loaded down with fine large peas. I gave many to our neighbors and engaged the rest to a vegetable buyer at 50 cents a bushel, selling from one to four bushels daily up to the 20th of October. This was, of course, in the pod, not shelled. I picked them, putting them in sacks. The peas supplied our family of six with all of the groceries we used and there was a surplus which bought many other things. After the green peas were gone I saved a sugar barrel full of dried shelled peas for our own use, sold twenty pounds for \$1, and there are peas yet to be gathered. These peas also help the soil, so it can be seen that the crop was a very profitable one, counting the cost.—Sarah Brown, Tennessee.

PEAS FOLLOWING WINTER OATS

In the fall of 1912 I sowed eight acres of rather poor soil, without fertilizer, to winter oats, which were harvested the last of May and the land sowed to cow peas. The oats threshed out 228½ bushels, which I disposed of as seed oats at \$1 per bushel. I sold also \$5 worth of baled straw, receiving 25 cents a bale. Last fall I saved twenty-five bushels of cow peas worth \$2.50 per bushel, and the cow pea vines made one ton of hay to the acre, or eight tons, worth \$15 per ton, or \$120. (The peas were saved from the early ripening pods.) For the oats I received \$228.50. The peas are worth \$62.50. The straw (what I sold and used) was worth at least \$14, making

a total of \$425 from eight acres in one year. I consider this my most profitable yield this year, counting the costs.—J. A. Hobbrook, Adona, Ark.

A WHEAT AND COTTON COMBINATION

Where cotton and wheat grow in the same section a crop of wheat may very suitably follow a crop of cotton if the cotton is well worked right up to picking time. Wheat may be sown between the rows after one of the pickings, and covered with a walking cultivator. A one-horse drill does very good work. I find this a very profitable combination, as it furnishes an early pasture for horses and milk cows, calves and other stock if sown early. By this system one can get the work done early and this is the right way of keeping the ground clean, by thorough cultivation. The cotton stalk should be cut and removed after picking is finished. Where wheat is to follow corn the same treatment of land is recommended. At suitable intervals the land should be worked with cultivator between the rows right up to wheat-seeding time. This keeps the ground clean and is a great means of saving moisture. And now then, Mr. Editor and brother farmers, as proof of what I have written, I would be glad for you to see my green winter pasture of wheat and rye and how the stock enjoys it.—G. W. Miles, Texas.

POPCORN HELPS PAY THE MORTGAGE

Last winter we had company and I got out some popcorn and a popper. We sat around the fire popping the corn, when the guests remarked upon the whiteness and size of the kernels. They asked where I bought it and I told them I raised it myself. They all wanted to buy some, but I only had a small quantity, and decided to keep it for seed. Last year I planted an acre and harvested nineteen bushels. I sold it at 8 cents a pound and made quite a bit of money. This year my father allowed me three acres of land for the corn and I harvested forty-seven bushels and raised my price to 9 cents, and thus made enough money to pay off part of the mortgage on our farm.—William Grant, Illinois.

GOATS' MILK

The goat is the poor man's cow. Goats' milk is richer in fats and solids than cows' milk, yet, strangely enough, is more easily digested, and is especially adapted to invalids and babies. The Angora goat is not a milk producer. The average milking doe will give from two to three quarts of milk daily.

TAUKEGAN ILLINOIS

COMMERCIAL FEEDSTUFFS

Cottonseed meal is made from what is left of the kernel of the cottonseed after the cottonseed oil has been extracted. It is very rich in protein. When the meal contains less than 36 per cent protein it is called cottonseed feed. Cottonseed meal is one of the cheapest sources of protein, and, being rich in nitrates and potash, has a manurial value greater than any other feed. Cottonseed hulls have a feeding value not quite equal to timothy hay.

Linseed meal, also known commercially as "oil meal" and "oil cake," is an excellent feed for all classes of live stock if fed in moderation. It is nearly equal to cottonseed meal. It has a tendency to make the butter soft when fed to dairy cattle to any great extent. There is practically no difference in the feeding value of the old and new process meals.

Gluten meal, a byproduct from the manufacture of starch from corn, has a 10 per cent greater feeding value than cottonseed, as a much larger percentage of its protein and fat is digestible. Gluten feed, a mixture of gluten meal, corn bran, corn germs and other corn "scraps," is a satisfactory and economical feed when used in conjunction with other concentrates. It is not always palatable when fed alone. The protein content is lower than that of cottonseed meal and it has more fiber than gluten meal.

Distillers' grains are the byproduct from the manufacture of distilled liquors from grains, and is rich in protein, fiber and fat. Its bulky nature enhances its feeding value and it is good for all kinds of stock. Malt sprouts are very satisfactory as a food for dairy cattle, and if fed in excess of two pounds daily per cow should be moistened with at least three times their weight in water.

Wheat byproducts consist principally of middlings, mixed feed and bran. Middlings are of two kinds, standard middlings and flour middlings, the former containing practically no flour, while the latter contains more or less flour, according to grade. Flour middlings has about 10 per cent greater feeding value than standard, but as a rule costs about 10 per cent more. Flour middlings are best for pigs and hogs. Mixed feed is supposed to be all the substance of wheat after the patent flour has been removed, but often it contains screenings, dirt and chaff as well. Sometimes a jobber or wholesaler will mix bran and low grade flour and sell it as mixed feed. Wheat bran can not be classed as a nutritious feed, but, being rich in mineral elements, has a very beneficial effect when fed to any kind of stock, excepting hogs. It has a large amount of crude fiber and is valuable to feed with concentrates.

FINE BUTTER MAKING A SCIENCE

Washing, Working and Salting

After churning has been completed the buttermilk should be drawn off immediately through a fine-meshed strainer to save all little butter particles. Then the butter should be washed with cold water, the temperature depending on the consistency of the butter. If soft, use water colder than the butter; if too firm, use water slightly warmer than the butter. Washing should remove all the buttermilk, firm and harden the article and improve the flavor and keeping quality. The method of washing depends primarily upon the kind of churn used. In a barrel churn use an amount of water equal to the amount of buttermilk previously drawn off and wash by revolving the churn eight to twelve revolutions. When washing is completed the butter should be still in granular form.

After drawing off the wash water take from one-half to one and one-half ounces of salt (according to the demands of the market) to each pound of butter. To be accurate, weigh both butter and salt. Sift the salt evenly over the granular butter with a fine-meshed sieve, preventing any salt lumps.

After the salt is sifted over the butter it is ready to be worked. Working butter accomplishes a three-fold object—distributes the salt, expels surplus moisture and traces of buttermilk and produces a fine-textured, compact body. The amount of working required depends on the size of the butter granules and whether firm or soft. Three points should be observed when determining whether or not the butter has been worked sufficiently: (1) It should present a firm, glossy appearance; (2) the texture should resemble the granular structure of the broken end of a steel rod; (3) there should be no grittiness from undissolved salt particles. Take a small piece of butter between the teeth and bite into it repeatedly. If grittiness exists it will be readily discovered. Insufficient working will show a mottled appearance on a cut surface; overworking produces a poor texture, without grain, "salvy" in appearance.

To the first 100 men owning horses, who answer this advertisement, I will positively send my introductory course in Horse Training and Colt Breaking **ABSOLUTELY FREE.**

World's Greatest System of Horsemanship

Twenty-five thousand FARMERS and horse-owners have taken my regular course and found that it *does the work*. Even if you have only one horse, it will pay you to master my wonderful system. The Beery Course is the result of a lifetime's work as a tamer and trainer of horses. As one of my students has said, "The horse has never been foaled that Prof. Beery cannot handle." My record proves it.

Master Any Horse

The Beery Course gives you the priceless secrets of a lifetime—enables you to master any horse—to tell the disposition of any horse at sight—to add many dollars to the value of every horse you handle—and my students are all good traders.

Break a Colt in Double-Quick Time!

You can do it by my simple, practical, humane system. There is a lot of money in colt training. **Make \$1,200 to \$3,000 a Year**

Many of my graduates are making big money as professional horse trainers at home or

My Graduates Are Doing Wonders

A. L. Dickinson, of Friendship, N. Y., says: "I am working a pair of horses that I cleaned out several men. I got them for \$110, gave them a few lessons, and have been offered \$400 for the pair." Fred Bowden, R. R. No. 2, Keokuk, Iowa writes: "It's worth many times its cost." It's worth many similar letters from graduates all over the world.

traveling. I made a fortune traveling and giving exhibitions. You have the same opportunity.

and will be more tender than when hurried too much.

Before the killing frosts come I dig it up, taking the root with as much of the dirt as I can keep around them. In our vegetable cellar, which is cool and dark, I put sand and dirt mixed. Into this I put the celery, roots down. The roots, not the plants, should be thoroughly watered once a week. Celery will keep in this way all winter.

I had celery to sell during the months of September and October, realizing in all \$9.30. For the smaller bunches I received 5 cents and for the large ones 10 cents. I expect to sell a couple of dollars' worth at Christmas time and we have had celery for our own use since August.

Considering the little time and expense—which was very small—expended, I consider this to have been my most profitable crop this year.—Mrs. Maud Conley, Lawler, Ia.

MARKETING THE SMALLER PRODUCE

A farmer living about ten miles from a city, in looking over a paper, found that the city consumers were paying much more for produce than he received for it. He was an up-to-date farmer and a man of ideas as well, so he began to look around for a plan by which he could sell his butter, eggs and other products direct to the users. Such a plan must be both handy and cheap. Just then the parcel post came. This offered the chance to the farmer, who seized the opportunity. A small advertisement was put into the city papers advertising fresh butter and eggs. Several persons replied and he immediately made an agreement to supply eggs and butter every week by parcel post at an equitable price which they both agreed upon. The farmer went to the city once a

month to collect. The plan worked admirably. The farmer had a number of wooden boxes made, very light weight, each of which would hold two pounds of butter and a dozen eggs. The eggs were wrapped in paper and put into the box, then cotton was packed between them. The butter was wrapped in waxed paper, put into thin pasteboard boxes. The empty mailing boxes were collected by the farmer on his monthly trips to the city. This is a case where one or two small advertisements eventually found a good market for all of one farm's butter, eggs and vegetables.—R. H. Hughes, Ohio.

CABBAGE, TOMATOES AND COW PEAS ALL ON THE SAME GROUND

The 1st day of March we set out 800 cabbage plants in long rows across our garden. We then covered the ground with chicken droppings. We tried to keep the soil well stirred all the time, to keep down weeds, to retain the moisture and keep the land mellow. Some of the cultivation was done with a plow, but a great deal of it was done by hand, using a tool with four prongs, called a potato hoe. After we commenced cutting the cabbage, tomato plants were set between the cabbage rows. At the last working of the tomato plants we sowed cow peas between the rows, the cabbage having been all cut by that time. Chicken droppings were scattered over the land several times and a little fertilizer used. We sold \$16.59 worth of cabbage, gave away at least \$5 worth, besides having all we could use. The lower leaves and trimmings were fed to our fowls and pigs. We did not keep a strict account of the tomatoes sold, but they did as well as other patches where no early crop was raised. The peas made fine feed for our Jersey heifer. We think it is so much better to raise two and three crops on one piece of land than to raise some vegetable early and then a lot of weeds.—Mrs. D. S. Hankla, Virginia.

COW PEAS IN THE CORN

I planted seed of the "sugar" crowder variety of peas in an acre and a half of corn, putting the seed in the corn planter. The corn was cultivated regularly, but I kept out all the weeds and grass from the plot when the peas were growing with the hoe. By August the vines were fairly loaded down with fine large peas. I gave many to our neighbors and engaged the rest to a vegetable buyer at 50 cents a bushel, selling from one to four bushels daily up to the 20th of October. This was, of course, in the pod, not shelled. I picked them, putting them in sacks. The peas supplied our family of six with all of the groceries we used and there was a surplus which bought many other things. After the green peas were gone I saved a sugar barrel full of dried shelled peas for our own use, sold twenty pounds for \$1, and there are peas yet to be gathered. These peas also help the soil, so it can be seen that the crop was a very profitable one, counting the cost.—Sarah Brown, Tennessee.

PEAS FOLLOWING WINTER OATS

In the fall of 1912 I sowed eight acres of rather poor soil, without fertilizer, to winter oats, which were harvested the last of May and the land sowed to cow peas. The oats threshed out 228½ bushels, which I disposed of as seed oats at \$1 per bushel. I sold also \$5 worth of baled straw, receiving 25 cents a bale. Last fall I saved twenty-five bushels of cow peas worth \$2.50 per bushel, and the cow pea vines made one ton of hay to the acre, or eight tons, worth \$15 per ton, or \$120. (The peas were saved from the early ripening pods.) For the oats I received \$228.50. The peas are worth \$62.50. The straw (what I sold and used) was worth at least \$14, making

a total of \$425 from eight acres in one year. I consider this my most profitable yield this year, counting the costs.—J. A. Hobbrook, Adona, Ark.

A WHEAT AND COTTON COMBINATION

Where cotton and wheat grow in the same section a crop of wheat may very suitably follow a crop of cotton if the cotton is well worked right up to picking time. Wheat may be sown between the rows after one of the pickings, and covered with a walking cultivator. A one-horse drill does very good work. I find this a very profitable combination, as it furnishes an early pasture for horses and milk cows, calves and other stock if sown early. By this system one can get the work done early and this is the right way of keeping the ground clean, by thorough cultivation. The cotton stalk should be cut and removed after picking is finished. Where wheat is to follow corn the same treatment of land is recommended. At suitable intervals the land should be worked with cultivator between the rows right up to wheat-seeding time. This keeps the ground clean and is a great means of saving moisture. And now then, Mr. Editor and brother farmers, as proof of what I have written, I would be glad for you to see my green winter pasture of wheat and rye and how the stock enjoys it.—G. W. Miles, Texas.

POPCORN HELPS PAY THE MORTGAGE

Last winter we had company and I got out some popcorn and a popper. We sat around the fire popping the corn, when the guests remarked upon the whiteness and size of the kernels. They asked where I bought it and I told them I raised it myself. They all wanted to buy some, but I only had a small quantity, and decided to keep it for seed. Last year I planted an acre and harvested nineteen bushels. I sold it at 8 cents a pound and made quite a bit of money. This year my father allowed me three acres of land for the corn and I harvested forty-seven bushels and raised my price to 9 cents, and thus made enough money to pay off part of the mortgage on our farm.—William Grant, Illinois.

GOATS' MILK

The goat is the poor man's cow. Goats' milk is richer in fats and solids than cows' milk, yet, strangely enough, is more easily digested, and is especially adapted to invalids and babies. The Angora goat is not a milk producer. The average milking doe will give from two to three quarts of milk daily.

The Danger of It

She—Has Jack's new auto got him into any trouble yet?
He—I understand he and the girl he has been taking out in it have become engaged.

Buying Eggs From Breeders

A FLOCK of fowls can be improved by one or both of the following methods: Breeding up the flock by selection of breeders according to utility, and by the addition of better stock from breeders who make a specialty of improved strains. Really the best and quickest way to improve the flock is by making use of both these methods.

When the owner of a flock sets out to purchase either eggs or fowls, or both, from a breeder, there are a number of things to be carefully watched, many possible disappointments to guard against. Complaints are quite often made that eggs purchased for hatching were a great disappointment, occasionally a total loss. Nevertheless the careful and discriminating buyer who takes proper precautions to investigate finds it a very profitable thing to buy eggs for hatching.

The great majority of poultry raisers who advertise eggs are honest, but not all of them may be equally capable. They will do as they agree, yet their stock may not be better than the birds of the customer. Therefore it seems necessary that one should know definitely something of the productiveness of the hens that lay the eggs he is proposing to buy. As a rule customers usually expect more than they should. They are more or less chagrined if every egg does not turn out a vigorous chick, said chicks to outstrip all other chicks in rapidity of development, begin to lay as soon as well feathered out, and keep right at it under any and all conditions. Did you ever stop to think that the producers of eggs that would turn out that degree of success would naturally be as valuable as diamonds, worth their weight in gold?

A successful poultryman has been buying eggs for hatching for the past sixteen years. He is a practical and successful poultry keeper, knows what he is doing, makes the business pay and has money in the bank his poultry put there. Do you imagine he would be placing an order this year for two sittings of single comb white Leghorns, at \$10 per sitting, if he had not found it profitable in the past? He has a fancy egg trade, and in order to keep up his flock to the highest point of efficiency he constantly buys from breeders whom he knows have better birds than his own. Now and then

he misses a year or two, because he is not convinced that he can buy, at a price he can afford, birds or eggs that will raise the standard of his own.

Every reasonable poultry advertiser will stand ready to make good any loss to their customers because of a poor hatch, but just how far they should go in making good poor results at maturity of stock hatched from such eggs is a far more complex problem, provided the eggs came from the pen or pens selected by the customer.

No breeder can but approximately estimate what may be expected of a certain mating, and it might well be adopted as a fundamental principle that where such a breeder sells a setting of eggs from a mating, he sells only a chance or probability to his customer, and more than this should not be expected by the customer.

Breeders of experience, even after years of painstaking effort to establish certain characteristics and enhance the value of their flock, have frequently been surprised at the outcome of certain matings.

No one can tell, we say, only approximately, what may be expected of any mating until the progeny therefrom is fully matured. The question is, are buyers of eggs for hatching warranted in paying a certain sum of money for an equal chance with the breeder? It occurs to us that they are, and we base our judgment upon our own experience and upon the experience of others with whom we have come in contact during our fifteen or sixteen years of active connection with the standard bred poultry business.

There are many things in favor of the novice starting with eggs for hatching; first, because it is the cheaper way; second, it gives them a better chance to study their birds as they are growing up; third, \$10 to \$25 invested in a setting of eggs, all things being equal, puts the novice breeder on a par or equal with the breeder of whom the eggs were purchased insofar as the chance of the latter is invested in the pen from which the eggs were purchased.

CHICKEN CHAT

By Dominic

If your poultry houses are crowded you will give your fowls more in feed than they will return in eggs.

Cull apples are fine for chickens. See that they get some every day if you have any.

Keep gloom out of the henhouse by giving plenty of light.

Begin with the new year to lay complete plans for the poultry work, and see how far you can excel your own plans.

If you don't take enough interest in your poultry to watch for the best layers for breeding, mating with a vigorous male of known parentage, keeping an account of production, you will have to put up with indifferent results. When really interested in the work any one of good common sense can make poultry pay.

For hatching purposes eggs are better if never allowed to get colder than 5 degrees. Gather the eggs several times daily in cold weather.

It is the comfortable, contented hen that lays the most eggs. Keep them busy, protected from cold winds, scratching for seeds, and they will be perfectly contented in winter as well as summer.

It is possible for a hen to lay eggs without green feed, but she will not lay very many. If you can not supply sprouted oats, give a good substitute.

That old hen you expect to kill for a chicken stew some fine Sunday should be fed on bread soaked in vinegar for six days before the festival. The flesh will then be as tender as a young chicken. She should be made very fat before beginning the bread and vinegar diet.

WHITE PEKIN DUCKS

I find ducks to be a profitable investment. Beginning in 1911 with a setting of thirteen eggs, eighty-nine ducks were sold in 1912, bringing \$36.75. They were kept in a yard a week or ten days after hatching and then turned on the range. The first few days they were fed on bread and milk, and after that they were given a mash of corn chop, shorts and bran several times a day until they were partly feathered, grain being fed at the last. They were then permitted to go to a nearby pond and lived on what they got from the water and on grasshoppers.

The following year the same methods were used, only on a larger scale. As aforesaid, eighty-nine reached the market, six were kept for breeding, while twenty-five pounds of feathers were picked.

The White Pekin ducks were used. I found them hardy and heavy layers and would advise their use.—Victor Landreth, Kansas.

Poultry Pickings

Split peas and peanuts make an excellent feed for fattening squabs.

Keep the hens at their exercise. Now is the time to give the best of care.

Neglect your fowls for a day and they will neglect you for a week.

If you are building up a private egg trade keep all the small eggs at home.

A good farm poultryman can make plenty of money if he can contract his eggs at 25 cents the year round.

A little finely chopped raw onion is an excellent tonic. Feed sparingly, or the eggs may be flavored by them.

Proper feeding will keep fowls from acquiring the habit of egg eating. Only the ax can cure the habit if once formed.

Are you feeding any animal food? Hens need it in their business right now. It is the natural food for egg production.

Sprouted oats for winter feeding—hope you have plenty of them for your chickens. The cellar is a good place to sprout them.

Wood ashes should not be mixed with hen manure. Keep them separate. Both are excellent fertilizers, but should not be mixed together.

To clean drinking fountains put a handful of birdshot in the fountain with a small quantity of water and shake vigorously. Empty and rinse with clear water.

If you have any turkeys to fit for market try this plan: Feed meal, boiled potatoes and oats and mix fine charcoal with the feed, one pint to each ten turkeys, daily. They fatten faster and are of better flavor.

Woman's Work and Welfare

Helpful Hints for Homefolks

Vale, 1913!

As the old year goes out on the dark'ning tide, Give it a cheer and a ringing "Good-by!" Wave it farewell as we all stand aside; It might have been better, but now it must die.

Nineteen Thirteen! To some it has shown The sunshine of happiness, joy and success; To others it's meant a hard journey alone, And worry well mingled with bitter distress.

And yet, whether kind or cruel to you, There's this to be said—if we but understood, Like a child that is wayward, it never quite knew What to do next—and it tried to be good!

FIRESIDE SOCIAL CHATS

By Aunt Sophia

STARTING the new year right is a fine thing, and it isn't a bit hard to do. Keeping it going right is far more difficult. But we should never face any difficulty with doubt or dread, or lack of faith in ourselves and in Providence. We should be able to take what comes without complaining and be always ready and eager to make the best of things. So we are going to make the best of our New Year's opening. It has been our custom for many years to give a New Year's dinner and an oyster supper. We have made it a neighborhood affair. There are four families in our circle, all intimate friends, and we share the expense, work and responsibilities of the New Year's festivities, which may be a bit unusual. A committee of one member from each of the four families makes all arrangements and invites the other guests. We invite those whom we think in greatest need of a bit of encouragement and good cheer. This year we will have with us Mrs. Walton and her five children. Mr. Walton died in November of pneumonia. He was a renter, and poor Mrs. Walton is at a loss to know what she can do. Our men folks will talk over her affairs together, and then with her, and then lend a helping hand. We all know the painful truth of the saying, "What is everybody's business is nobody's business," and it is everybody's business to help the unfortunate; so, as a matter of fact, the help is spasmodic and uncertain. By our little plan we make it definite. There's an understanding in the neighborhood of what is to be done and who will do it. Then there is another family who now live several miles away, but who are going to move on the farm where the Waltons live on the first of March. We're going to bring them in to get acquainted, so they will feel at home and a part of our neighborhood before they come into it. The men folks can give Mr. Denman some "pointers," and Mrs. Walton can tell Mrs. Denman all about the house and garden and chicken facilities. Just a bit of a helping hand reached out to the newcomers. We will have one or two others, but I haven't space to tell of them.

I am going to anticipate just a little and tell you of a plan we make use of to help along in school matters. We all know what happens to the "new boy" at school. As a girl my heart ached when a strange and forlorn little waif came to our school for the first time, the only stranger in the merry bunch of boys and girls. He feels an outcast, and my husband, who says he remembers the occasions when he was the new boy, declares that turning a boy loose in a strange school is nothing less than cruelty to animals. So our "committee" took the matter up and a new plan was the result. When a new family moves into the neighbor-

hood we give a children's party and a supper at one of our homes and invite the school teacher. This party is given as soon as the family is settled and the parents are urged to come. The children get acquainted, and the keen edge of strangeness soon disappears for all time. You see, we want to build up that community spirit they are printing so much about, and if I do say it myself, we have a very fine neighborhood and help each other to live happily.

While on the subject I will tell you of the way we add a lot of happiness to these children's parties. We make a lot of little cakes, which are baked in patty pans, one for each youngster. These cakes are frosted with white icing. After the icing has hardened we melt some chocolate and with a fine, new pointed paint brush, very small (such as artists use for water colors) we draw faces, some laughing, some crying, on each cake. A neighbor's girl is an adept at this and the results are fascinating. Then the initials of each child are placed on its cake and these cakes are served when the children can get together and compare cakes. Wait a moment while I give you my recipe for these cakes:

One cupful of butter, one-fourth cupful of granulated sugar, one-fourth cupful of powdered sugar, two tablespoonfuls of boiling water, two eggs, one-half cupful of cold water, one and three-fourths cupfuls of pastry flour, one and one-half teaspoonfuls of baking powder, a few grains of salt, one teaspoonful of vanilla.

Cream the butter; add the sugar and blend both together; add the powdered sugar and beat in the boiling water. After giving the mixture a thorough beating add the well-beaten eggs. Add the flour, baking powder, salt, vanilla and cold water alternately. Bake the cakes in little patty or muffin pans. As soon as done remove from the tins and cool on a flat surface. For chocolate cakes add three tablespoonfuls of grated chocolate to the above recipe. For cocoanut cakes omit the chocolate and add three tablespoonfuls of grated cocoanut.

These are very tasty and grownups like them as well as the children.

I shall keep right on asking for chatty letters from our readers for this department. Don't you know, my dears, that the way to become a part of the life of our little world is to do a part of its work? Send in a thought, or a suggestion, or the account of an experience, or a story of some happening that was of benefit to some one. There are dozens of good letters just begging to be written. Can't you accommodate at least one of them? AUNT SOPHIA.

MRS. BUSYHAND'S DIARY

By a Farm Woman

(Continued From Last Issue)

FRIDAY

Mary did the sweeping, upstairs and down. I baked ten loaves of bread and five or six pies. In the evening we were invited by our neighbor across the way to attend their missionary meeting. Fourteen ladies were present and gave a good program. Leaflets were passed to each woman and each one in turn read from these, interspersed with prayers and singing. A paper was read about Rev. Adoniram Judson, the first missionary sent out by the United States, telling of the hardships and sufferings he endured. Afterward I told the ladies about what I knew of this great missionary. He was a great friend of my great-uncle,

Rev. Abram Gillette, who was also a Baptist. My uncle wrote the life of Judson, a small volume of which I have a copy in our library here at home. Rev. Judson first met his third wife at my uncle's home. The ladies seemed quite interested to hear all this. And, by the way, I myself wrote a brief review of this book and it was printed in our church papers a short time ago (although I did not tell the ladies this). After the business part was transacted the hostess served refreshments, consisting of a piece of lemon pie, cake, peaches and a cup of coffee, on each plate.

SATURDAY

Instead of having baking on hand as usual, I had other fall work that needed to be done. The children picked butter beans and George and the little girls took them in to the city and sold them to the groceries, getting a good price for them. We feared frost would come and freeze everything, so I thought I would try and dig the rest of the sweet potatoes. The Saturday before our big boy, who is attending the O. S. U., was home and dug over a bushel. Well, I dug the potatoes and little Ann and a neighbor girl picked them up and put them in baskets and crates. They were beauties. I love to see the big sweet potatoes roll out of the ground. Then when they were wiped off I rolled each large potato in newspapers and packed them away in a big box. I had papered the box and its lid all over with nice, clean wall paper, so when we set it in one of the halls upstairs it was an ornament as well as a useful piece

of furniture. These will keep till spring, as I have tried this method successfully before.

Sure Enough

Inquisitive Expert—Is the water you have here healthy?

Housewife—To be sure it is. We shouldn't use any but WELL water.

TERRIFF'S LAST INVENTION

The New Gravity Washer

The master effort of a lifetime devoted to the study and manufacture of Washing Machines. It is an undisputed fact that Wm. W. Terriff invented and put on the market more and better washing machines than any other man. The New Gravity Washer was his masterpiece. It will wash anything from a pocket handkerchief to underclothes and the heaviest bedding perfectly clean, and the gravity principle makes it run so easily that a child can operate it even with a heavy load. The last year of Mr. Terriff's life was largely devoted to writing his biography, which he published under the name of "Twenty-Four Years Hustling in the Washing Machine Business Under Two Flags." We will send you this interesting and instructive book FREE and tell you how you can get your five booklets absolutely FREE. First washer without costing you a single penny. Don't delay—write today to
WOLVERINE WASHER COMPANY, 220 Canal St., PORTLAND, MICH.

This handsome Easy Rocker given with an \$8.75 order of our GROCERY PRODUCTS.

CLOTH AND STYLES FOR EARLY SPRING

Although we are still in the midst of cold and sleet, and have yet many weeks of it to face, we are already seeing signs of spring in the city shops. The eye is first attracted by the new materials displayed and labeled "spring novelties." In the great majority of cases these materials are of more or less crepe-like texture. They are not crepe, in the regular sense of that word, but they have a rippling surface and are in general more or less crinkly. This is true of silks, woollens and cottons alike.

In silks we see soft, dull-surfaced weaves, but the satin face weaves are by no means banished. They are merely treated differently and are usually covered with some other tissue. To our surprise we find taffeta among the novelties and it is taking well. It is of the chiffon variety and is very soft and easy to handle. It drapes well and it is especially suited to the puffs and peplums that are used on everything.

Peplum is worn by every one and has an immense variety of forms. The pleated, the gathered, the shaped and draped varieties are all very popular. It is not uncommon to see the peplum of a material different from that of the rest of the frock and the box-pleated crepe de chine peplum is worn on most of the dresses of messaline and silk.

Some of the prettiest of the more serviceable frocks show a combination of plain and plaid silk. The new plaid silks are especially attractive. They are principally in dark colors, with very wide open plaids, generally picked out by a stripe of gold or of some bright color.

The woman who wishes to be in the very latest mode must have a collection of vests or waistcoats. These may be made in fichu form, or they may be plain, with a center front closing. Others again are gathered to form a soft girdle and have a bow or buckle of the material to hold them in front. The vest, which has a half belt in one with it, is quite fashionable and it is being shown in leather as well as in brocaded velvet, silk and metallic fabrics.

The neck finish is also very important at present. The low neck is the rule and the large collar the usual trimming. This can be much varied by making it in the many new shapes shown in the late designs. The use of the fichu is also popular and in many cases we see fichu ends coming from beneath the edges of the wide collars and crossing on the bosom of the wearer.

The draped vest is really more of a chemisette in appearance and this is of tissue of any sheer, soft kind, shadow lace being very popular.

A large number of separate bodices are being shown, mainly in white, and this looks like a preparation for warm weather in a sort of compromising manner. The white waist as it is worn today is generally of shadow lace or of net. It always has a lining and this is frequently trimmed half way up with some colored ribbon, which produces a girdle effect from the outside. These waists are all low in the neck and are often trimmed with tiny vines and flowers of chiffon in pink, blue and light green with leaves and tendrils of gold or silver.

Serious Question

"Where are you going?"

"To the Department of Agriculture," replied the city man who had bought a farm. "I want them to settle a dispute between my wife and me about the best way to milk a cow. I think it would be sufficient to tie the pillows around the cow's feet, but my wife insists that the only practical way is to give the cow chloroform."

It Would Have Been Different

Nibbs—Was that your wife I saw you talking to last evening?

Dibbs—No. If it had been my wife I would not have been talking. I would have been listening.

What is Now the Fashion

6452. CHILDREN'S NIGHT DRAWERS.—Flannel or longcloth can be used to make this garment, which can be made with or without the feet and with either the bishop or plain sleeves. Cut in sizes 2, 4, 6, 8, 10 and 12 years. Size 8 requires 3 1/4 yards of 36-inch material and three-fourths yard of edging for the neck.

5995. LADIES' SHIRTWAIST.—Linen, madras or China silk can be used to make this shirtwaist. The waist can be made with or without the box plait at the front and with either the long or short sleeves. Either the round low or high collar can be used. Cut in sizes 32 to 42 inches bust measure. Medium size requires 2 3/4 yards of 36-inch material.

6460. CHILDREN'S APRON.—Every small child needs an apron and here is an excellent pattern for making such a garment. This apron covers the entire dress and can be made with either the bishop or plain sleeves. Linen, gingham or percale are used for aprons. Sizes 2, 4, 6, 8, 10 and 12 years. Age 8 requires 2 1/2 yards of 36-inch material and 2 3/4 yards of edging.

6445. GIRLS' AND CHILDREN'S CAPE.—A cape is a handy garment to wear over a sweater or to cover a party dress. This model can be made in either of two lengths and is provided with a hood. Cut in sizes 2, 4, 6, 8, 10 and 12 years. Age 8 requires for the long cape 2 1/2 yards of 44-inch material, with five-eighths yard of 24-inch silk to line the hood.

5932. LADIES' DRESS.—What could be smarter for general wear than this stylish frock, carried out in any of the woolen materials. The dress has shoulder ticks and closes at the front. The skirt is cut in three pieces. Cut in sizes 32 to 42 inches bust measure. Medium size requires 4 1/4 yards of 50-inch material, five-eighths yard of 22-inch all-over and three-eighths yard of 24-inch satin.

5903. LADIES' DRESS.—Serge, cheviot or broadcloth can be used to make this dress. The dress closes at the front and is made with a three-piece skirt. Cut in sizes 32 to 42 inches bust measure. Size 36

requires 4 1/4 yards of 36-inch material or 4 yards of 44-inch material.

6103. MISSES' AND SMALL WOMEN'S DRESS.—Serge, cheviot or broadcloth can be used to make this dress. It is made with a three-gored skirt, which can be made with either the empire or regulation waistline. The long or short sleeves can be used. Cut in sizes 14, 16 and 18 years. Age 16 years requires 4 1/4 yards of 36-inch material.

6468. LADIES' APRON.—This is a plain and practical apron, the front panel fitted in to the figure, and forming a bib and tabs over the shoulder. The sides end at the waist and are gathered, while the large pockets are stitched into the side front seams. Cut in sizes 34, 38 and 42 inches bust measure. Size 38 requires 4 1/4 yards of 36-inch material.

Stuffed Eggplant

Parboil an eggplant for ten minutes, then lay in ice-cold water for an hour. Prepare a "meat" of one-half cup minced boiled ham or tongue, teaspoon of minced parsley, a few drops of onion juice, salt and pepper to taste. Add a beaten egg. Drain and wipe dry the eggplant, cut lengthwise in half, make a good-sized cavity by scraping out seeds and pulp, which is added to the meat. Fill the cavities, bind the halves together with a strip of muslin, lay in a deep pan, pour over the vegetable a cupful of stock, cover and bake for half an hour. Lift into a hot dish, remove the strip and pour about the open halves the gravy. Sausage meat mixed with bread crumbs makes a very delicious filling also.

Andy's Beef Stew

A famous dish of a New Yorker, whose stew is still talked about by Gothamites. Here is Andy's own recipe: "Take a flat bone steak, three pounds in weight. Remove all bone, fat, skin and gristle. Cut the meat into half-inch squares, rinse in cold water. Fill a three-gallon agate kettle half full of water, set on the fire and let it warm. While warming, scrape two good-sized carrots and slice three onions and two green peppers. Put all in chopping bowl and chop medium fine. Now put both the meat and vegetables into the hot water, boil twenty minutes, add a quart of red tomatoes and boil slowly one hour. Then add one dozen medium-sized potatoes and boil twenty-five minutes longer. Add a tablespoonful of Worcestershire sauce and tarragon vinegar, half a spoon of celery salt and serve immediately." Remember that Andy was cooking for a small-sized banquet. A good-sized family, like my own, can make a full meal on half the quantity.

What 15c Will Do

The little matter of 15c in stamps will bring you the
Pathfinder for 13 weeks on trial. The Pathfinder is an
illustrated weekly, published at the Nation's Capital,
for the nation; now in its 21st year of increasing in-
success. The paper fills the bill without emptying the
purse; it costs but \$1. year. If you want to keep posted
on what is going on in the world, at the least expense
of time or money, this is your means. If you want a
paper in your home which is sincere, reliable, entertain-
ing, wholesome, the PATHFINDER is yours. If you
would appreciate a paper which puts everything clearly,
fairly, briefly—here it is at last. Send only 15c to
show that you might like such a paper and we will send
the Pathfinder on probation 13 weeks. The 15c does not
repay us, but we are glad to invest in new friends.
Or send \$1 for full year; money back any time if not
satisfied. Address Pathfinder, Box 7, Washington, D. C.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE
Young People, and to give them a chance to express themselves in print, and to exchange
thoughts with one another. Everyone that writes a letter that is acceptable becomes a
CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—
will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and em-
bossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

A NEW DEPARTURE

ANOTHER YEAR is gone! How
many of us have taken ad-
vantage of more opportunities
than we have neglected? That
is a question of importance to us all.
Let us answer it by determining in the
future we will avail ourselves of every
possible opportunity for good.

And as Cadets of Equity let us "turn
over a new leaf." Write letters just
as you have been doing. Speak of
your home and its surroundings as it
may occur to you to do, of your crops
and any unusual feature there, historic,
romantic and natural, and ask for cor-
respondence if you wish, but be sure
to tell in each letter some NEW
THING you have but recently learned,
something that will be new to others
as it was to you; something on the
farm, or in the house, or in the kitchen,
or among the stock, or any kind of use-
ful knowledge. What a school our
great little company can thus be! Let
each letter contain one thing that is
new.

We start this time from the great
state of New York:

DEAR CADETS—I am going to walk
into your happy circle if you will let me sit
between those jolly "cowpunchers," M. O.
Olsen and Charles Newcomb. I am a "sweet
sixteen" and an earnest reader of UP-TO-
DATE, that dear old paper which has been
making our home happy for three years.
When I am coming home from school I
hurry to the office and get UP-TO-DATE.
Yes, I know just what day it comes. Your
letters are all very interesting and helpful
to our family of ten that live on a 240-acre
farm—helpful because it tells us how to
raise good crops of corn, oats and lots of
potatoes. But our potatoes are seriously
affected with dry rot. Tell all the Cadets
to write and send photos to me, and I'll
answer all.—R. Frances Denman, Never-
sink, N. Y.

DEAR CADETS—I am 17 years old and
have lived on a farm nearly all my life,
but I like city life much better than country
life. I live with my parents and brother on
a farm of 100 acres. It is very hilly here
and we have great fun coasting and skating
in the winter. I love to be out of doors and
ride horseback. I certainly enjoy reading
the Cadet letters. I would like cards and
letters from every state in the Union. Will
answer all.—Lillian Y. Pickett, Belleville,
W. Va.

If we follow the Cadets we get over
the country very rapidly. We now
pass from West Virginia to Massa-
chusetts:

DEAR CADETS—I enjoy reading your
letters in UP-TO-DATE FARMING very much,
and I wish to add one to the list. I am 15
years of age and have lived on a farm all
my life. I would be more than pleased to
hear from some of the Cadet boys and girls
near my age, and will answer all postals and
letters I receive.—Lena Wells, North Adams,
Mass.

And now we get away back south
into Mississippi:

DEAR CADETS—I have been taking UP-
TO-DATE for a long time and think it a
fine paper. I am a Mississippi girl and live
on a nice little farm of 40 acres. Our
principal crops are corn and cotton. I am
not attending school, and sometimes I get
very lonesome. I wish some of you Cadets
would make me a visit. I will try to show
you a pleasant time. I am a Baptist, and
have belonged to the church five years. I
do not think it is the denomination that
saves us, but rather the kind of lives we
live. Character is what counts in the world
and I think all young men and women
should aim to live right so that others may
safely follow in their footsteps. I want
every one who reads this to write to me.
I will answer all, and to the first I will
send a pretty post card.—Dovie Turner,
McCool, Miss.

We now get closer home:

DEAR CADETS—I recently became
greatly interested in the Cadet letters. I
am a 16-year-old Indiana boy and live in
a small town thirty-three miles from Indian-
apolis. I am in high school. We have a
new building, and to all the Cadets that
write I will send a picture of it. I will
answer all cards and letters I receive.—
Floyd Baker, Arcadia, Ind.

Raising alfalfa in Ohio:

DEAR CADETS—I am 16 years old and
live on a 191-acre farm in Ohio. My sister
has been taking UP-TO-DATE for about three
years and I like it very much. Our crops
are wheat, corn, oats and alfalfa. It has
been very dry this year and our crops were
poor. I would be glad to receive a letter
or card from all the Cadets. I have a
camera and will exchange photos. I will
answer all I receive.—Irene Fleming, Circle-
ville, O.

DEAR CADETS—I am 17 years old and
have lived in the country most of my life.
My father takes UP-TO-DATE and thinks it
is the best farm paper printed. I certainly
enjoy reading the Cadet page. I would be
glad to exchange letters, cards or photos
with the Cadet girls and boys. Will try
to answer all.—Myrtle Bradford, Atkins,
Ark.

DEAR CADETS—Here comes a letter
from a western girl of 19 winters. I live
on a stock ranch in eastern Washington.
I love to ride horseback and to be out of
doors. I would be pleased to exchange
post cards or letters with all the Cadet girls
and boys.—Maude E. Osborne, Gloyd, Wash.

DEAR CADETS—I am an Iowa girl, 17
years of age, and have lived on a farm
all my life. I think the farm is a grand
old place. I am very much interested in
the Cadet letters and think UP-TO-DATE is
a very good paper. I am a sophomore in
our nearest town school and like to go
to school very much. Will the boys and
girls please write, and I will answer all
I receive.—Faye H. Filson, Birmingham, Ia.

DEAR CADETS—I am 15 years old, live
on a 215-acre farm and go to Malesus high
school. I enjoy reading UP-TO-DATE and
I also enjoy going fishing and chestnut
hunting. I would be pleased to hear from
all the Cadet girls and boys and will try
to answer all cards and letters I receive.—
Ova Love, Malesus, Tenn.

This wide-awake Nebraska boy wants
the Cadets' fathers to become organiz-
ers. And so do we. And the Cadets
themselves to become club raisers.
That will push the work along:

DEAR CADETS—I have been a reader
of UP-TO-DATE for two years. After reading
a few issues of the paper my papa decided
that the Equity System was the only thing
for the farmers, and he decided the only
way he could help it along was to become
an organizer. Since July he has organized
five locals. I am sure Mr. Everitt would
appreciate it very much if every Cadet's
father would also organize a local. That
would help greatly toward the goal UP-TO-
DATE is striving for, and it would also help
the farmers. I would like to hear from the
Cadets and also from their fathers who
undertake to organize, and will answer all
I hear from.—Glen F. Walton, Geneva, Neb.

Couldn't do without UP-TO-DATE in
Colorado:

DEAR CADETS—I am a Colorado boy
and live on a farm of 800 acres. I was
16 December 20. We have taken UP-TO-
DATE twelve months and think we couldn't
get along without it. I play the violin and
my brother seconds on the guitar. I would
like to receive cards and letters from all
the boys and girls, and will try to answer
all I receive.—Elvis R. McConnell, Strat-
ton, Col.

Yes, education is the thing:

DEAR CADETS—Here comes a brown-
eyed Alabama girl. My papa takes UP-TO-
DATE FARMING and I enjoy reading it very
much. I think it is the best farm paper
published. I am interested in education.
I think every boy and girl should have an
education, and I am striving for all the
common schools can give. I would be glad
to exchange postals with the Cadets.—Nel-
lie G. Selby, Larkinsville, Ala.

DEAR CADETS—I live on a farm be-
tween the small towns of Burke and Dibona.

THIS AIR RIFLE GIVEN

For selling 10 packages Blue at 10c each.
Blue first class in every way. When sold
return our \$1.50 and we send rifle. **BLUE**
MEFG. CO., 330 Mill St., Concord, Mass.

See what I will give you. Do as I say and answer now—today. You will be the most
prized person in the world when you see how I am giving ponies away.

Dan Rogers, Pony Man, Department 24, Springfield, Ohio

I like farm life much better than city life, and I have tried both. I go to school at Burke, where we have a real good school. I like to go to school and think every one should strive for an education. I would like to exchange letters and cards with Cadets who care to write, especially those from other states. I am 16.—Audie Lovette, Burk, Tex.

Here we go from Texas to Wisconsin:

DEAR CADETS—We are cousins and live on farms some distance from Wild Rose, a small town in the central part of the state. We have a high school, a few churches, a number of business places and residences, but no saloons. There is a beautiful fish hatchery located here, and there are a number of lakes where we young people enjoy ourselves immensely in summer. We would be very glad to exchange letters or cards with any reader of this paper.—Maud Murty and Beatrice Sage, Wild Rose, Wis.

Now go with us away over to Maine:

DEAR CADETS—Here is a girl from the good old Pine Tree state. I am 19 years old and live on a farm with my parents; have always lived on a farm. We have lots of cold weather and snow here, but still I enjoy nice sleigh rides, especially on moonlight nights. I wish to be a Cadet and I would like to have the Cadet boys and girls write to me.—Lillian B. Craig, Mars Hill, Maine.

DEAR CADETS—My age is about 19 years and I live among the West Virginia hills. The chief industry of our country is farming, although it is rough. My father takes UP-TO-DATE and I like it very much. I greatly enjoy cards and letters and will answer all.—Patrick J. Brady, Bradysville, W. Va.

DEAR CADETS—I live with my folks on a 320-acre farm and have lived in Iowa all my life, so I don't know much about other states, but I think I can stand it here awhile yet. I am very much interested in the Cadet page. I was 20 November 3. I love to live on the farm, for I think what would the town folks do if it wasn't for the farmers? We get our mail every day, so don't let it be long till I hear from some of the Cadets. I will answer all I receive, and would like to hear from every state.—Clara Stauffer, Blairtown, Ia.

DEAR CADETS—I am a school teacher, but I live on a farm and enjoy farm life. I am 21 years old and would like to hear from the Cadet boys and girls.—Mollie Teal, Lincoln, Ala.

DEAR CADETS—I live on a farm of 360 acres and like living on a farm. I am 20 years old and would like to hear from the Cadet boys and girls.—Mary Hollingsworth, Lincoln, Ala.

DEAR CADETS—We are two west Texas girls, 17 years old, and we enjoy reading your letters very much. We live on a farm and like farm life fine. We enjoy going to parties and having a good time. We are chums and live about 300 yards apart. We have lots of fun together. We love flowers and music. We would like to exchange letters and post cards with all the Cadet boys and girls. Will gladly and promptly answer all.—Theresa Jones and Nada Acuff, Gatan, Tex.

DEAR CADETS—I am 19 years of age and live in the country and am very fond of outdoor sports. My father takes UP-TO-DATE and I think it is a fine paper. I enjoy reading the Cadet letters very much. I go to high school and this is my last year. We are very busy now trying to decide on our class pins, but, of course, each of us wants a different pin. Will be pleased to hear from the Cadet girls and boys.—Lucile Colner, Fishersville, Va.

DEAR CADETS—Will you please make room for a jolly Michigan girl of 20 summers, one who likes to read UP-TO-DATE FARMING and thinks it a fine farm paper? I am a country girl and enjoy living on the farm, but I like the city, too. I will be glad to hear from all the Cadet boys and girls, and would like to get scenery post cards and will answer all.—Weta Hawks, Nashville, Mich.

DEAR CADETS—I am a country girl, 15 years old, and I live on a 160-acre farm in the great wheat belt of Kansas. My parents have been taking UP-TO-DATE for nearly a year and we think it grand. I love music, books, flowers and pictures, and I enjoy many of the outdoor sports, mostly horseback riding, boating and fishing. I would be glad to receive a card or letter from every state in the Union, and I will answer all.—Opal Rawlings, Turon, Kas.

DEAR CADETS—My father has an 80-acre farm and I help him with the work and enjoy farm life very much. Oregon is a nice state. It is not very cold in winter, but we have a great deal of rain. All kinds of grain, fruits and vegetables and also many hops are raised here. It is also a great lumber state. We live twenty miles from the large city of Portland. Our nearest electric line runs a mile and a half from our home. I am 20 years old and would like to hear from the Cadet boys and girls.—Jane Scotford, Hillsboro, Ore.

DEAR CADETS—I have been reading the paper for some time and think it interesting. I am 18 years old and live on a farm. I have a little brother named Clarence, who goes to school every day. He joins me in this letter, and we hope to hear from you boys and girls and will answer all cards or letters we receive.—Laura and Clarence Bradshaw, Ponthill, Ky.

We must close this department now, and there are so many letters yet un-

printed that it seems scarcely necessary to print the names and addresses of the writers. Please note at the head of the department the new leaf the Cadets are turning over at the beginning of the year. Young people who are capable of writing such letters as these learn something new every day, and we want in every letter some one thing the writer has recently learned that will most likely be new and useful to every reader. We do not prescribe the nature of that knowledge. All we ask is that it be new and useful. And it must be told in just a few words so as to leave room for the usual information given in the letters, the age and occupation, likes and dislikes, home surroundings, requests for correspondence, etc. I wish all a Happy New Year.

FOX TRAPPING

DEAR EDITOR—The fox is very sly and cunning and hard to trap. I will give here my method of trapping them. Go to the open woods near a cow trail. Now build a V-shaped pen of pears or thorny bush, put a No. 2 trap in entrance, covering it with pulverized horse manure. Now place bait, which should be a skinned cotton-tail rabbit, in the rear of pen. Before you come to the place where trap is to be set, cut out the entrails of the rabbit and smear all over soles of your shoes. Also wear gloves. The fox will not go to the bait the first night, but is usually caught the second night. Do not tie trap to anything solid. It should be tied to a small log.

I smoke my traps with green cedar twigs three times a week. This destroys the smell of iron. Never oil your traps with machine oil, as it causes the animals to be suspicious. Always use lard for oiling them. New traps should be buried in soft mud in order to dull their brightness.

I will now tell you what animals we have here. We have coon, skunk, fox, civet cat, wolf, bobcat, ringtail cat and also a few deer; also plenty of turkeys and ducks. Black skunks are very scarce; also very few wolves.

Well, I guess I'll close, as I believe Tim will have plenty of work anyway. Wishing my brother trappers all success.—Walter O. Lang, Harper, Tex.

Wanted: Wet

A Dane who owned a farm in Kansas applied for naturalization papers, says an exchange.

The judge asked him:

"Are you satisfied with the general conditions of the country?"

"Yes," drawled the Dane.

"Does the form of government suit you?" queried the judge.

"Yes, yes; only I would like to see more rain," replied the farmer.

98 CENTS POST PAID

To advertise our business, make new friends and introduce our big catalogue of high grade American made watches we will send you this elegant watch postpaid for only 98 cents. Gent's size, high grade gold plate finish, lever escapement, stem wind and stem set, accurate timekeeper, fully guaranteed for 5 years. Send 98 cents today and watch will be sent by return mail. Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, "Major" is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor. I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want "Major", just send me your name and do it quick. I have a gift for you. A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

My Name
is
"Major"

I Am Now
42-in. High
and 3 yrs. Old.
I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I go almost as fast as a horse and can haul my carriage with my little tinner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal), and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want "Major" and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick

TIM'S TALK

W TRAP for two things—the sport of making a capture and the money we pull down for a fine, silky fur. This season is going to leave some sore spots. The catch is going with a rush, but prices are going down the slide. London, England, rules the fur market, you know, just as Liverpool has been ruling the wheat market of the world. October fur sales were the largest ever known for that month. New York dealers declare that prices had been forced too high, and there's too many unsold furs in dealers' hands. This is not a bright prospect for us, but it may be better when winter tightens up in earnest.

We are getting in some good stories now, as well as some original methods of trapping. We have about covered the ground of how to trap, and we should be able now to tell some mighty interesting experiences. We have a lot of good letters on hand for which we have no room.

Julius Schupp of Otterville, Mo., describes a novel coon set and wants to know the best method of catching mink. He has had poor success so far.

Herbert Williams, St. Mary's, Mo., has no trouble catching 'possum, and thinks UP-TO-DATE is all to the good.

J. A. Brown Jr., Graham, Tex., likes trapping so well he is almost tempted to play hookey from school to follow the trap line, but he does not, which proves him sensible enough to make a good trapper.

Merle Cobleigh, Brattleboro, Vt., and a partner went up in the Vermont woods with all kinds of guns and traps after fox and all other animals. They won some prizes, the "partner" getting a fine buck. Merle hoped to do the same before Christmas, when the season closed. Here's hopin'.

Gordon Craig, Gilman, Ia., has had good luck catching the civet cat and wants to know how to take the muskrat after the creek freezes up. Come again, boys. TIM.

RUNS DOWN A WOLF WITH HORSE AND BUGGY

DEAR TIM—I was reading some of the trappers' stories in UP-TO-DATE FARMING today and they reminded me of an interesting experience I had while spending the harvest season in Canada.

On Sundays I generally hunted prairie hens and other small game. On this particular Sunday I had not seen a prairie chicken and had turned my horse, which was hitched to a light spring wagon, toward home, when I noticed that my dog, after excitedly running around in a circle, started in a bee line across the plain. I looked ahead to see what he was after and was surprised to see a wolf loping through the high grass a considerable distance ahead. The dog quickly

Hunting and Trapping

For Pleasure and Profit

gained on the wolf until within fifty yards, when the wolf woke up and the dog was unable to gain any more. They remained in this position until lost from sight. I had given up seeing the wolf again and had driven one and one-half miles when I saw it cutting across the prairie in a line that would bring it across in front of me, so I whipped up the horse and changed the shell in my gun. I had a single-barrel gun and No. 2 shot. In three minutes' time I was within 100 yards of my game, but he did not seem to heed me. He was going at a slow lope, with his tongue lolled out as if fatigued. As soon as I got within sixty yards of him I raised my gun, and just as I went to pull the trigger the wagon struck a bump and I shot over it. I loaded up again, and this time hit him as he spurted up for a ways. My horse was beginning to grow tired and I knew if I did not down him at the next shot I would have to stop, so I whipped up to full speed and as soon as I got close again I fired, with the result that the wolf dropped with a broken back. Just as I got my horse stopped the shafts came loose, so I had got my quarry in the nick of time. I fired one more shot to put it out of misery, loaded it in my wagon and went happily home.—Harold Gregory, Lexington, Ill.

REMINISCENCES OF BOB SNOW

Bob and "Chief" Fish While Waiting for Winter Weather

It was a warm day in November several seasons ago that I was sitting by a campfire watching my partner, "Chief," cooking flapjacks and lamenting our hard luck. And things did look bad. November was well nigh gone and it hadn't been cold enough to scare a butterfly. Things were suddenly livened up, however, when "Chief" upset the flapjack into the coffee kettle. I was immediately possessed of the idea of chucking kettle and all over his head, but restrained myself when I remembered the dexter-

had fallen face down into the snow. Then I woke up. Sure enough, there was "Chief" standing in the doorway, through which was blowing snow. Outside the world was white and cold. I jumped out of bed and gave a couple of Indian yells, but was brought back to earth by Chief asking where that box of shells was at.

The shovel was also explained, it being right handy in clearing the snow off the wood pile. There could not have been found two fellows happier than we were that morning.—Bob Snow.

P. S.—In the next number I shall tell of our experiences on the trap line. (Continued Next Issue)

ANOTHER SKUNK SET

DEAR TIM—I have been reading the trapper letters in UP-TO-DATE for some time. So I will tell you how I trap skunk. Now some trappers say locate the den and set trap at entrance, but a den or hole is not easily found, especially if there is no snow, so I'll tell you my way, which I hope will be of some use to brother trappers. First get some bait. The best I have found is intestines or lungs of pigs; in fact, anything you throw away when you butcher. Go where the skunk is likely to frequent, generally in hilly, stony ground covered with sumachs. Make a tunnel of stone, or I use the hard shell of a hemlock stump turned to make a tunnel. Fill or cover one end and put bait inside, close to covered end, and set trap in open end. Turn spring over to side, when trigger pin is so the animal will not get frightened if he steps on it, but will step in trap first thing. Cover trap with dry leaves and fasten chain to a drag. An old dead sumach tree is just heavy enough to drag. I caught seven skunks, seven weasels or ermine in six sets last winter while trapping two months. I sold these and got \$16.35.—Carl Lofgren, Port Allegheny, Pa., R. F. D. 3, Box 88.

TRAPPING COYOTES IN CALIFORNIA

DEAR TIM—Having read others' experiences in trapping in UP-TO-DATE FARMING, I thought I would relate mine.

The fur-bearing animals of this country are the California lion, coyote, lynx, skunk, coon and fox. I use No. 4 Victor or Newhouse traps. For catching coyotes I find a favorable place. I then make a V-shaped runway of brush, putting the little end against a chaparral bush. I tie my bait—a dead chicken if I can get it—to the chaparral at the end of the runway. I put my traps about eighteen inches back from the bait. I dig a shallow hole and bury my traps with dirt, placing a piece of cloth over the pan to keep the dirt from getting

under it. Sometimes I fasten my trap to the bush, but prefer to fasten a weight to each spring with a chain.

Sometimes I get a lynx or a skunk instead of a coyote.—George Bacon, Cook, San Benito, Cal.

FROM A TENNESSEE BOY

DEAR TIM—I have just begun trapping and I have caught thirty-one opossums, two cats, six weasels, one fox and one coon. I do most of my trapping with deadfalls. I kill a rabbit and go along creeks and hollows and select a good spot. I set up a good-sized rock, heavy enough to kill what I trap. I never set over six or seven inches high. If set too high they will dodge it. I put the bait at the far end of the fall and leave things as natural as possible. This is an excellent trap for all animals. I also trap with steel traps. I make my set by a small tree. Place the bait about two feet high. Place the trap about fifteen inches from tree. Trap some around dens. I have been trapping one week. I go to school and don't have much time to trap only of mornings and evenings. I am a reader of this paper and think it can't be beat.—Lee Butman, Red Boiling Springs, Tenn.

Must Have Been Hard and Heavy

Wife—We have been married twelve years and I have never missed baking a cake for your birthday.

Hubby—That's a fact, dear, and I remember those cakes as milestones in my path of life.

Bob's Dog, Gun and Game

ity with which he handled a skillet. After breakfast I went down to the river and started to fish for bass. By 1 o'clock or thereabout I had a nice string of fish. I then started toward evening a cool breeze started blowing and clouds gathered in the northwest. "Chief" was inclined to be optimistic and offered to bet me a box of shells that we would have some winter yet, which offer I gobbled, saying that our country had somehow become shifted out of the winter territory. Taking our guns, we went out to get a couple of rabbits for supper. It was dark when we returned and somehow the fire, which was still burning, felt quite good. About 7 o'clock we turned in, and I noticed that just before "Chief" got into his blanket he stood a shovel up against the door, but was too sleepy to make inquiries. I slept soundly until morning and dreamed that it was snowing and I

New Model 27 **Marlin** REPEATING RIFLE
Made in .25-20 and .32-20 calibres also; octagon barrel only; \$15.
Use both regular and high velocity cartridges. Powerful enough for deer, safe to use in settled districts, excellent for target work, foxes, geese, woodchucks, etc.
Its exclusive features: the quick, smooth working "pump" action; the wear-resisting Special Smokeless Steel barrel; the modern solid-top and side ejector for rapid, accurate firing, increased safety and convenience. It has take-down construction and Ivory Bead front sight; these cost extra on other rifles of these calibres.
Our 128 page catalog describes the full Marlin line. Sent for three stamps postage. Write for it.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing
By the President of the F. S. E.

Now for 1914!

The most successful convention the Farmers Society of Equity ever held was the fifth one, last month.

It was demonstrated by the good men from fifteen states that at last farmers are headed in the right direction to restore to the farmers their God-given rights and win their industrial freedom.

They met for a worthy and common cause. It was to further advance their plans and organization, and make felt their power to end the dictatorial rule of boards of trade and other speculators, manipulators and exploiters of their products, and to quickly secure to themselves the just and equitable rewards of their toil.

It was indeed a remarkable gathering of splendid people. Each delegate was a credit to the members at home who sent him, as he loyally upheld the principles of our organization and worked early and late to perfect plans for its rapid development.

The delegates from near and those who traveled near two thousand miles have returned to their homes. The convention's acts are now a part of the history of this movement for the emancipation, from galling business conditions, of the greatest class of our people—the farmers.

The members, and all the farmers not yet members, have now a great work before them. The convention furnished the plans for the year's work, but all of us must join hands and work shoulder to shoulder to carry them out.

Our society increased over 300 per cent in 1913 over 1912. How much will it increase in 1914?

If it increases another 300 per cent it will be truly a powerful organization. But we can easily do far better than this.

The writer, in his annual address to the convention, said:

I believe it is possible for this convention to produce conditions that will enlist a million or more farmers during the coming year, and thus complete our machine for marketing, when the producers of the crops

will have ALL to say about the prices, and terms of sale.

Let us see what foundation we have now for such belief.

First—Heretofore the F. S. E. was only an organizing society, like there are several other national organizations in the field. But the convention broadened its scope and in the future one of its chief activities shall be to federate independent associations for unity in marketing.

Second—In the past the terms on which organizers could be employed made their remuneration uncertain and often inadequate. The convention, mindful that the society must have organizers and that they must be paid, has provided that more money shall go to the organizing fund. With this provided for, a great many good organizers ought to be secured readily, and that is all that is needed to carry our business system to every agricultural community and have it accepted.

And third—In the past year there have developed strong organizations of the society in three sections of the country. They are the Gulf Coast section, the Inter Mountain section and the Oregon-Washington section. These sections are logical marketing units, whether operating each by itself or through the national clearing house, and there are other sections of the country that stand in the same position.

It was represented in the convention that these sections would like to enjoy a large degree of self-government and under such a condition they would soon become solid in the Farmers Society of Equity, even including the independent associations now in such sections. Recognizing these things, the convention authorized the formation of Section Clearing Houses or central business heads for a considerable section of country.

It is the intention to prosecute organizing and federating in these sections, where there are many successful organizers now, until the work is completed there and then the same organizers will be moved on other sections. In this way there will at-

ways be several conquering armies in the field.

The organizers will be led in 1914 by that intrepid soldier and conquering general, A. Y. Satterfield of Idaho. He has to his credit more results in organizing, federating and business done by his organizations than any other worker in the movement.

Organizers and others will please take particular notice of these things. Those organizers who hold a commission should now see to it that a local clearing house is established at each market town, either by organizing or federating. Full particulars and new terms will be sent to commissioned organizers promptly and to others on request.

So the appeal is to every commissioned organizer to make a new and increased effort at once. And we want some person in every community where this paper goes, and where an organizer is not working now, to send the blank appended for our new terms.

Never before could the F. S. E. go forward with the steam in its boilers as now. There are hundreds of loyal workers enlisted in the army of organizers now that are going to stand by the movement through thick and thin. In return they ask the hearty co-operation of every farmer, or at least his friendly hand grip.

Individually you can do much to spread the gospel of controlled marketing, and any individual can organize a local clearing house if he tries. But we must all work together, too. All over the country others are putting their shoulders to the wheel and they need YOUR help and co-operation. It is a case of all for one, if one is for all. Pull with us and we'll all pull together for you. When we help ourselves in the F. S. E. we help others and others help us. That is true co-operation and benefits are realized by everybody.

Everybody knows the farmers are the most useful class of people on earth—the only class that all the rest of the world can not do without. But the rest of the world is apt to forget this when they see the farmers ask what somebody else will give him for what he has to spare and in the next breath ask "What will you take for that?"

The reason manufactured articles and store goods are so steady for prices is because they are controlled and are held until the prices are paid. Contrary to this, the prices of farm products are always in a flutter, sometimes up and sometimes down, the changes coming every day or every hour. The reason for this is that the producers do not control them in marketing, but tumble over each other in their blind efforts to dump on the same market, the same day.

By the old system farmers have been only a small brick in the world's great business edifice. We want to place them firmly on the solid foundation they have inherited, for all time.

Don't blame anybody but yourselves. It is your own fault—the old conditions. And don't look to anybody but yourself for bettering them. God made a balanced creation, but there are a lot of people who are trying to unbalance it. God gave each man two legs to stand on, otherwise we would have been a queer family of "hoppers." A balanced farmers' business must have two legs to stand on—one of production and one of marketing. A lot of farmers' teachers, though, don't think so, and they have built agriculture on one leg—of production. And that is the reason farmers have been hopping through the world and have been pushed from pillar to post

at the will of others. The F. S. E. is putting an end to this one-sided business.

Send the blank and help.

THE BLANK

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvement in marketing. Send them full particulars of F. S. E. and send to me full particulars and instructions for organizing. I will take the lead or get some person who will.

Branches in All Principal Cities

Don't blame anybody but yourselves. It is your own fault—the old conditions. And don't look to anybody but yourself for bettering them. God made a balanced creation, but there are a lot of people who are trying to unbalance it. God gave each man two legs to stand on, otherwise we would have been a queer family of "hoppers." A balanced farmers' business must have two legs to stand on—one of production and one of marketing. A lot of farmers' teachers, though, don't think so, and they have built agriculture on one leg—of production. And that is the reason farmers have been hopping through the world and have been pushed from pillar to post

ganizers, satisfactorily rewarded, it can be completed in a comparatively short time. I believe a plan can be evolved that will be self-supporting and under which practically an unlimited number of good organizers can be enlisted in the work.

If we hold to the proposition that our marketing problem can only be solved by having one organization for the whole country, for all the farmers and for all the crops, then the Farmers' Society of Equity is confronted with the fact that there are thousands of independent local and district marketing associations already in existence, and many more being organized each month, that can not be brought into ours, or any other national organization as body unions or units. If it is impossible to do this to a large extent, which I verily believe, then as long as they are on the outside, they will be competitors, with us, for the markets, and certainty of results can not be obtained. These organizations, collectively, include enough producers now, which, if they be federated for one object alone, that of securing unity in directing the marketing, our great problem would be solved. In union there is strength. Regardless of what peculiar, distinctive features any of these may possess and prize, I hold that there is not one of them that can not be prevailed upon to combine with a national movement for central direction of marketing, providing a successful plan is offered them, with satisfactory terms for becoming a unit of such national movement or federation.

Several such associations have federated with us in 1913, because they recognize our plan as the sound and practical one, and I have evidences from some others that they will look upon such a proposition favorably. A number of them have asked for a prompt report of what this convention does toward bringing about such unity of work.

In view of these things will it not be wise to broaden the scope of our society and make federating one of its activities along with organizing? The plan need not be changed, I believe, a particle. I am no person to fool the people. If it does not seem possible for the Farmers Society of Equity, or any other national organization, to equip American agriculture with a complete marketing machine in a short time, for the reasons as given, then I am ready to broaden our work to attract the independent associations, for marketing only. I recommend that a committee be appointed to consider this whole matter and report to this convention.

Probably the greatest problem, affecting all the people, that waits for a solution, is the high cost of living. I can see how the farmers, when organized in the Farmers' Society of Equity for marketing right, can relieve this trouble very much. But farming is a business by itself, and when made always profitable will be a business sufficient in itself. Make the farmers' business profitable as it should be, then the inclination of farmers to go into storekeeping will not be in evidence. Also, when farmers sell right they will not be grouchy about the prices they pay. Also, when they set the prices on their products and are in a position to compel them to be paid, they will naturally prefer to sell to the first person who will pay the price. So the farmers' crops may, even then, be bought up by the same people who now dominate the markets and exploit the consumers. And if this condition obtains, when farmers control their crops and get their prices, the responsibility will not be on the farmers. But, as we analyze the case we conclude that it is up to the consumers to solve their own problems of the high cost of living. In other words, when the farmers control their crops and the marketing is directed from a central point or from central heads in several districts, the farmers' organization would rather sell to a consumers' cen-

tral receiving house, or agent, in a market, than to the hundreds or thousands of houses that now handle the stuff. What I believe is desirable is for all the demand of a city, and the country surrounding it, to express itself at a central place where the farmers' organization can find it and supply it. This can be done if the consumers will get together in a simple organization. Then can come close co-operation between the producers and consumers. The plan I have in mind does not mean the elimination of middlemen, except as there may be too many of them.

Appreciating the great advantage it will be to farmers to have one known place in each market where the demand has expressed itself, so that it can be met there by the supply, I have extended an invitation to some of the consumers of the city to meet with us tonight at 8 o'clock to consider the matter.

Since our last convention Congress has passed a new tariff law. It opens up the markets of our country to free trade in farm products with the world. It is a fact that all labor and all commodities are on a higher level of price in the United States than in any other country in the world. Also our standard of living is higher and more expensive. These things have come to pass after many years of protection to our industries. Most industries outside of agriculture still are afforded a large degree of protection—in the main, I assume, adequate. But agriculture must now compete with the agriculture of the world, and our farmers must compete with the cheapest labor and the cheapest lands in the world—Canada, Russia, Argentina and India. Inasmuch as these countries can lay grain, potatoes, meat and many other products of the farm down in our populous eastern cities at less cost for transportation than our own farmers west of the Mississippi river can, it must follow, I believe, that the new tariff law, when fully in effect, will prove a staggering blow to our farming. Therefore I recommend that this matter be thoroughly discussed in this convention, and if deemed wise that a resolution protesting against it be passed and that, if it is decided that the new law will disarrange our crop plans and be an injury to the farmers of the United States, that we make it an additional incentive to increase our membership to a million or more, and then throw our united power against Congress in a demand for the repeal of the law as it relates to farmers and give protection to American agriculture, so we and our children may live as American citizens should and not be ever menaced by a fear of living as the peons of South America and the serfs of Russia. The resolution, if one is enacted, should emphasize the fact that the tariff act has so far fallen short of giving any relief to the consumers, and the very general opinion is that it always will.

Another thing that I believe should be the subject of a resolution is the proposition to establish an entirely new line of banks to supply the needs of farmers for money. We have so often referred to this in our official paper that I will not attempt any further explanation here other than to say that the Farmers' Society of Equity must always stand opposed to multiplying institutions, just as we stand for the proposition that there are too many middlemen handling farm produce. There are about 27,000 national and state banks and trust companies and about 20,000 postal savings banks now. Add to these say 25,000 rural credit banks and think of the enormous number of people and institutions for the people to support. But rather let us stand for the efficiency, safety and equity of present institutions. Farmers should not have any superior facilities for borrowing than any other business men, and they should not seek a lower rate of interest than is paid by others. But they should have the same rights

and advantages under our general banking laws enjoyed by other citizens. Again, I believe the first thing is for farmers to get in a position to sell right and then their needs for borrowing can be gauged. We invite all the people who are solicitous for farmers' welfare to join with us to first solve this fundamental problem—the one of marketing—then we will accept their good offices toward making borrowing easier, providing we need to borrow. I wonder, though, whether we would not have money to lend rather than be a borrowing class?

And still another question that should have some attention. It is the proposition to increase the crops without limit, without a single word of ad-

vice about marketing them. Millions of public money, raised by taxes, are being expended in this endeavor. The people back of it are the grain and produce exchanges and boards of trade, our old enemies with new faces, because they are operating through the agricultural colleges. We have the proofs to substantiate these statements, resolutions should be passed by this convention, warning our agricultural colleges that they were established for the best interests of the farmers and not as tools of the interests whose chief concern is to get farmers to work as hard as they can, to produce all they can, so the price will be cheap and there will be the maximum to handle, transport, store, ex-

plait and gamble in. If there is any evidence in all the statistics of the Department of Agriculture, or elsewhere, to prove that farmers' prosperity can come through greater crops while other people name the price, I advise you to indorse the county expert and the exclusive greater crop movement and extend a vote of confidence and thanks to the exclusive-greater-crops agricultural-college workers and teachers. If, however, you find that the big crops bring the producers less money than moderate ones, you can not condemn the institutions too strongly for their one-sided, unbalanced help. Let the resolution demand that every effort, at the expense of the public, to teach greater production be coupled with a like effort or help to complete a farmers' marketing system. I also call your attention to the fact that there are two or more bills before Congress now to make the greater crop movement, without any pretense at helping farmers to market better, a national movement.

We should have a committee on amendments to our constitution and by-laws. Various members have sent in recommendations, which I will present at the proper time. Also the matter of our degree work should be considered. The first and second degrees, or "Great Lessons" as we call them, have never been acted on in national convention. They were supplied to meet the demands of some locals, while other locals are opposed to their use, or rather, I should say, to the second one, which is a secret degree. In presenting the second degree to organized locals headquarters has always left it optional with the local whether it be used or not.

As you know, the Farmers' Society of Equity has a marketing system and issues a directory of market representatives, which is placed in the hands of all members at large and local and county unions. In the past it has been left with the local or district business agent whether shipments would be made to the selected representative or he select his own. Inasmuch as our whole plan is toward centralization and unity of marketing, I believe I can see the importance of selecting a good house for each class of produce, on each market, and that all the society's produce be sold through that house. In this way the volume of business should encourage the selected representatives to give the very best service.

I can not too strongly recommend that this convention again take up the practice of naming minimum prices on all leading crops. This can be made the great strength of the society. The delegates to our last convention thought that the agitation for reciprocity with Canada and later the tariff law agitation and its passage unsettled conditions so much that there was no known basis to work from. While most of our crops are now on a world's basis for prices, yet from the fact that the world has always needed all that was produced, we may conclude that if our members and many others fix a price in their minds and hold for it, that there will be such a large quantity held for the price that the world must have it, and the prices will be paid before the next harvest. Of course we must continue to organize and work for the time when enough crops will be held for definite prices, so that the price will be paid for the first bushel or other unit as well as for the last. The official paper of our society has a circulation of over 200,000 copies and probably half a million readers. The minimum prices published in each issue of the paper can not fail to exert a powerful influence toward getting them.

Other recommendations I will make as the convention progresses. I know also that there are people here with ideas for the good of our society and I urge them to not be backward about presenting them. What we want is a full, free, open discussion, when I trust the will of the majority will be wise.

My injunction is that you keep before you the true plan of our organization, which is proving successful wherever given a fair trial. Remember, farming may be a business as truly as any business in the country, and that our purpose is for the farmers to control it and do their own business instead of only the hard work. As long as we let others take our stuff and market it we will be laborers only, but as soon as we do our own marketing we will be business men.

I have purposely refrained from going into the details of the Farmers' Society of Equity plans to solve the marketing problem, because we have the printed plans. If there are some here who are not familiar with them, they can get them from the secretary. Ask for "Crop Rich, Money Poor Farmers" and my address before the United States Good Roads Association at St. Louis.

It may be proper to state here that this headquarters has put in as hard a year's work as any of you men who have worked in the field. Some of you feel disappointed over the meager results obtained, compared with the effort, in such a good cause. We at headquarters feel some of the same disappointment. Sometimes I feel like the man who wrote, many years ago, "Humanity—God's greatest mistake in all the work of creation." How farmers can so persistently neglect to embrace this movement, in view of the great immediate benefits and the ultimate blessings it will bring to them and their children for all time, is one of the annoying features of our work. But it will all come right in the end. Sometime, and at no distant time, the scales will fall from farmers' eyes and understanding will come to their minds, when there will be honor for those who championed their cause. As firmly as the rocks are established on the mountain's crest, I believe in the triumph of our cause, when Justice and Equity will rule the earth, and that the people on the farms will be the most important members of society. The clouds that now somewhat obscure the vision of what America is destined to be, when farmers are free, are gradually disappearing. Let us work for the full accomplishment of our purpose in the coming year, 1914.

You remember the song in which this occurs: "Earth has no ills that heaven can not heal." But who wants to wait until he goes to heaven to be freed from his troubles, when, with a little well-directed effort, we can have more of heaven on earth? Yes, through the triumph of this farmers' movement.

I believe we are entering the grandest and best age of the world. There are more promising movements in progress now for the reform of the world and the uplift of humanity, than ever before. The people are aroused, and they are determined to end all gambling, exploitation, plundering and graft, wherever it exists. In the near future the PEOPLE will rule. We will organize them for business. They will find it PROFITABLE to stick together, and then they will exert their combined power to rule the country in Equity. They must, because, being the rulers, if they permit inequity in business and government, they will practice it against themselves. I predict that when future generations read about how people lived and did business in these days they will marvel and wonder what manner of people we were, much as we wonder what kind of people the mound builders, cliff dwellers and the barbarians were to live their way and under their conditions. I am glad that I live now rather than at any other time.

Brethren, we've got to fight it out along the lines we've started. We've got to change the farmers' business system. Give us now, with the plans we are working under, the membership that the Grange or Farmers' Alliance once had, and the work will be done now and forever. Give farmers the benefits they are bound to re-

ceive through this society completed, or in a federation working on the same platform, and they will never abandon it, but it will be as permanent and enduring as agriculture itself.

We'll do it, won't we?

"There is no chance, no destiny, no fate Can circumvent, or hinder, or control The firm resolve of a determined soul. Gifts count for nothing—will alone is great;

All things give way before it soon or late.

What obstacles can stay the mighty force

Of the sea-seeking river in its course, Or cause the ascending orb of day to wait?

Each well-born soul must win what it deserves.

Let the fool prate of luck; the fortunate

Is he whose earnest purpose never swerves,

Whose slightest action, or inaction, Serves the one great aim. Why, even death itself

Stands still and waits an hour sometimes

For such a will."

This convention and the Farmers' Society of Equity are now in your hands.

How to Get an Education on Sound Organization and Successful Marketing

Many thousand new subscribers have been received recently and hundreds of new members to the Farmers Society of Equity are being enrolled every day. All of these people should know all about the F. S. E. plan of organizing and the Equity System of Marketing, and how they differ from farmers' organizations that they possibly were members of before. To such we recommend the following, which will be sent postpaid on receipt of price:

FARM LANDS

IN THE SWIGART TRACT of western Michigan are some of the best general farming lands; good opportunities in stock, poultry, truck, dairying and diversified farming; center of fruit belt; large profits in fruit growing; Lake Michigan harbors; four railroads; 8½ hours from Chicago; \$10 to \$35 per acre, and most of the land on 40 acres. Annual terms if preferred. If you should die the land will be bequeathed to your family free from further payments. Prices higher in spring. Ask about privilege of exchange, seed supplying arrangement, instructions to settlers by experts, power dams to be built. A thousand 40-acre pieces from which you can choose; 10 and 20-acre tracts near growing towns. Write for my 72-page booklet and plans now. George W. Swigart, owner, Z-1250 First National Bank Bldg., Chicago.

FOR SALE—165 acres finely improved land, rich soil, on pike road, within ten miles of Columbia City; population 4,000, county seat Whitley County, Indiana; within five miles of Baber, on "Nickel Plate"; five miles of Hanoka, on "Wabash," and within six miles of Indianapolis; close to public and high school, close to church; eleven miles of Huntington, population 10,000; fifteen miles of Fort Wayne, population 70,000. Land very rich, high state of cultivation; 9-room house and other improvements; five acres in orchard, 25 acres in timber pasture, balance in cultivation; a most desirable home and must be sold; certainly a bargain. Address or call on C. H. Crothers, Hanoka, Ind.

Shores-Mueller Co., Dept. 20, Cedar Rapids, Iowa

Dear Reader:—
Listen to Me!
YOU may believe every
word I say. If you will,
the time you spend in
reading this advertisement
will be the most profitable
period of your life. I can put
you in the soap business where
you can easily make \$150.00 per
month. Any bright man or
woman can make more money
working for me than in any other way. I
have hundreds of agents making \$2,000.00 a
year. I have always been in the agency
business, myself, and I know it from A to
Z. I will teach you how to make sales and
make you successful. I have made money in the
agency business, and many of the agents I have
taught have made their pile and retired.

I now have a much better proposition than ever
before—one that makes my agents more money,
and I like it better myself. The reason my agents
have been so successful is that I do not handle
junk, tinware or cheap John goods of any kind
that never lead to repeat orders. I do not pay my
agents with premiums, but they get hard cash and
soon have money in the bank. It is repeat orders
that make money in any business. Go into any
home on Monday morning and you will find them
washing; go to the neighbors and you will find
they are washing too. It is the same thing all
over the country. The demand for soap is unlim-
ited, and repeat orders never cease. Now, what
does this all mean? It means that someone is
getting the enormous profit from your territory
which should be yours.

There is big money in the soap business and I
give my agents the big end of the profit—a profit
so large that I hesitate to state in this public
manner what it is, but will be glad to advise you
confidentially when you write me. Suffice it to
say for the present that you will be satisfied. I
can give you a chance to make such a big profit
that you will be more than satisfied with your
income and willing to stay with me year after
year and be one of my loyal representatives. I
personally teach every agent how to make money
and make it fast. My plan has been a great suc-
cess, and I will give it to you FREE. Now, I want
to say to every man or woman who is anxious to
make money and better their condition, write me.
Don't lose a moment's time, but write me at once,
and address your letter to **JOHN B. HEXCOX**,
General Manager of the Wolverine Soap Company,
206 Water Street, Portland, Michigan.

Question Box

This column is for members and subscribers. Use it
to ask questions that may concern you. Others may
want a reply to the same question and an answer
through this column will serve a multitude of cases.
The answers will be made by Mr. Everitt and may be
considered dependable. If a direct reply is wanted,
enclose two stamps.

**QUESTION—Can the F. S. E. assist us in
obtaining farm help—hired men and renters?**
—Wm. Englehart, Secretary, Hebron, N. D.

ANSWER—This notice may help you. Out-
side of this the national headquarters can
not be of much help under existing con-
ditions. This is another problem that will
solve itself when farmers sell their crops
right and have enough income assured to
pay their help to equal and work the same
hours per day as other industries. There
are said to be 15,000 unemployed men in
Indianapolis and proportionately as many in
other cities. But as long as conditions in
the country are such that the people raised
there will not stay, those away will not be
attracted to farming as an employment or
business. Help yourself by completing our
organization all through your section.

**Q.—In reading November 15th (1913)
number I see you state: "In organizing
for business the element of religion must
be tabooed and the only question to be con-
sidered is, does he produce crops to sell?"
I wish to say that if we live for this world
only we can follow your instructions. But
we are immortal and must work out our
soul's salvation while on earth.**—H. J.
Leupp, Washlucua, Wash.

A.—Our discussion was of the claim made
by a writer that there are sections where
difference in religious belief would operate
against organizing the farmers and success-
ful co-operation. If each man's religion
must be brought into the business organiza-
tion, then the writer referred to is correct.
But we took the stand that religion must
be kept in the home and the church. There
is the place for each person's soul's sal-
vation according to each one's ideas. But
in the local clearing house of the F. S. E.
is the place for each and all to work out
their business salvation. There are many

different religious beliefs, but only one plan
that farmers can follow in business. So,
while all can not be as a unit in religion,
they can all be as a unit in their business
matters of controlling the crops and mar-
keting. Therefore, we say taboo every-
thing in the local clearing house that is
not business.

**Q.—I appreciate our paper very much,
but I would appreciate it more if you would
print the market prices of horses and ad-
vise us as to future prices.**—J. H. Frogge,
Corvallis, Mont.

A.—The prices in different parts of the
country vary so much that we could not
make such prices generally applicable. We
advise you to apply direct to dealers in the
large cities in the northwest, also in St.
Louis, Chicago and Buffalo, N. Y. Blair-
Baker Company, Union Stock Yards, In-
dianapolis, is a good firm handling horses.

**Q.—One of our members has a grievance
and he has been doing considerable talking
to the injury of the local. He has not made
any complaint in a meeting. What should
be done in such a case?**—Alabama.

A.—Impress upon your members the im-
portance of making their complaints in
closed meetings, where they should be han-
dled according to the rules laid down in
the by-laws. In your case we understand
that it is regarding the sale of some produce
through the higher clearing house. If
deemed wise, appoint a committee to in-
vestigate and report.

MEMBERS OF F. S. E.—NOTICE

In our subscription campaign some
letters intended for straight subscrib-
ers only, and not for subscribers in
connection with membership to the
Farmers Society of Equity, by mistake,
were sent to the latter class. This is
to say that no attention need be given
to them. In cases where a collection
of Christmas cards, etc., were sent
along, the member, if his subscription
is paid in advance, may keep the pack-
age with our compliments.

THE PUBLISHERS.

The Income is in the Selling

NO FARMER can live and sup-
port a family unless he has
an income, and he can not
have an income unless he re-
ceives for his products more than they
cost him. Otherwise he has only what
he had before. He has no reward for
his labor, and no accumulation to-
ward an independent living for him-
self and family. Each year he must
do the same thing over and over again
until time or disability compels him to
stop.

An income, then, the farmer's re-
ward for his work, must come in the
shape of profits, and profits are in
increased production without a thought
or a care for profitable selling. But
not all. Many now admit the truth
they but recently ridiculed. We quote
from a well-known stock paper:

It is not enough for one to merely raise
the cattle and be able even to produce big
records. One must be able to sell his stock.
This is where hundreds of men fall down.
It is perhaps the weakest point with all
of us farmers.

Very true. What use is it to have
a surplus unless it can be sold? And
there is nothing gained in the selling
unless it be sold at a profit. That is
the truth, isn't it? Let us quote from
a newspaper which only a few years
ago ridiculed and opposed this doc-
trine, and did nothing but urge the
production of more and more stuff:

It is not so much a matter of raising
bigger crops, but rather a question of get-
ting more money for what you produce.

True again. But that is not all.
There must be a market that can pay
the price—a demand that requires the
supply. And the demand and supply
must find each other. Again we
quote from that same paper:

Car load upon car load and even train
loads of apples rotted on the farms of the
United States this fall. At the same time
consumers in large cities were paying 40
to 50 cents a peck for apples.

And in many places, we may add,
they could not get them at all. What
is the trouble? It is certainly not that
the farmers fail to produce enough.
It is the fault of the marketing sys-
tem. Farmers must not only see to
it that they get a profitable price, but
they must have an equal care that
their stuff goes to the demand, else it
will not all be taken and the demand

will not all be supplied. It must not
only be brought in reach of those who
need it, but it must come to them at
a reasonable price, a price they can
afford to pay. This does not mean a
reduction of the price paid the farm-
ers. It means rather a cutting out of
the unnecessary expenses, waste, and
unearned and exorbitant profits that
are gathered in between the produc-
ers and consumers. What do you think
of consumers being charged \$1.50 a
bushel for potatoes that the farmers
received 50 cents a bushel for? That
is often the case in American mar-
kets, not only with potatoes, but with
other products. And to compel con-
sumers to pay such prices the prod-
ucts are gathered in centers and held
away from those who would gladly
have them at reasonable prices. Thus
is consumption reduced, and needed
commodities perish in the fields.

But it is different now, though many
still persist in their mad schemes for
a greater production, apparently
ignoring the fact that the farmers'
profits come in the price received and
not in the quantity sold. It depends
upon what he gets for his stuff, not on
the quantity he produces. This is an
old truth, but it is a comparatively
new realization. When we proclaimed
this fact only a few years ago the
"experts" in agriculture, the farm
press, the schools, the business men,
and especially the market chiefs, ridi-
culed it from start to finish, and went
ahead with their combined efforts for
increased production, and that alone,
as the road to agricultural achievement
or successful farming.

We are writing for thinking and
reasoning people. They must remedy
these conditions, and it must be done
by compelling a better marketing sys-
tem, a system that will not store the
goods to shorten consumption and
compel extortionate prices, but that
will pay just prices to the farmers
and then distribute the stuff so as to
supply every demand, in village, town
and city, at prices that carry only
just and reasonable profits. Give us
that kind of a marketing system and
demand and price will boost increased
production with far better results than
demonstration trains or pleas for "bet-
ter farming."

Complaints

Make them if you do not get prompt
service. If about supplies from headquar-
ters, or the official paper, complain to
headquarters. But at the same time send
a tracer to the state union, if one, or
organizer, as sometimes reports to head-
quarters are not sent promptly. Remem-
ber, we can't do our part until we get
the reports.

Headquarters is willing to shoulder its
responsibility, but always try to find where
the fault lies.

Louise

Over 2 Feet Tall
Louise is a grand big baby, over 2 feet tall. You can dress her in a baby's clothes. She will sit or stand. She can't break. She is a beauty.

No Present for a Little Girl Could be Better

This big doll is delighting thousands of girls in all parts of the country. There was never a finer plaything for the little folks. No matter how many dolls the girls have, they always want another. Louise and her brother and sister will be given away to little girls or any one who sends a subscriber.

If you want more than one doll family send more subscribers. We will give a doll family with each six-months subscription at 25 cents. Clip the coupon and add more paper for list.

JIMMIE
He is fully dressed and measures 9 inches high. He comes to you with a pretty blue suit, red tie and brown shoes.

SUSIE
She wears a white dress, red sash, blue stockings and brown shoes. She is 9 inches tall. All the girls love her.

Will You Accept These Three Big Dolls?

This family consists of Louise, over two feet tall; her brother Jimmie, a husky fellow, and sister Susie, each nine inches tall. If you get them you can name them to please yourself.

Louise is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is brown. She has bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have three dolls like these to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

Our Offer We will send this whole doll family—Louise, over two feet tall, and the two other dolls, nine inches each in height. All you need to do is to send us one six-months subscription to Up-to-Date Farming (new or renewal) for 25 cents, or let us extend your present subscription six months. Address

Doll Dept. 98A, Up-to-Date Farming, Indianapolis

Louise is nearly as big as this little girl. She is as large as a real baby. (From a photograph.)

This little girl is showing Louise her picture book. She plays with her big doll for hours every day. (From a photograph.)

I'll Stop Your Losses From WORMS

I'll Prove It or NO Pay—

IF YOU will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough Sal-Vet to last all your stock 60 days. I'll do this entirely at my risk and without asking a single penny of pay in advance. All I want is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—**make you more money.** You can't afford not to accept this remarkable offer.

The Great WORM Destroyer

REG. U.S. PAT. OFF. **Great LIVE STOCK Conditioner**

is the biggest boon to stock owners ever discovered. It is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and makes farm animals sleek, thrifty, healthy, flesh-building money-makers and greatly lessens the danger from hog cholera and many other diseases. Read these letters—

"The benefit which my horses, cattle and sheep derived from the use of 'Sal-Vet' is such as to make it almost indispensable."—A. L. Martin, Director of Institutes, Dept. of Agriculture, Harrisburg, Pa.

"Your 'Sal-Vet' has done all that you claim and perhaps more. Hog cholera has been all around me and I have not had one sick hog. I cannot praise 'Sal-Vet' too highly, and I do not hesitate to recommend it to all hog raisers."—A. O. Kellogg, Troy Grove, Ill.

I'll Feed Your Stock **Sixty Days Before You Pay**

Just as I have for hundreds of thousands of other farmers who sent me the coupon. Send no money. I don't ask you to risk one penny. Tear off the coupon below, mark down the number of hogs, sheep, horses, cattle and mules you own, give your name and address and shipping station and I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. Tell me what Sal-Vet has done for you and if it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny. It is no trouble to feed Sal-Vet. Being a salt animals like it and run to it freely.

They Doctor Themselves

It requires no dosing, no doping, no drenching, no starving, no trouble at all. Surely then you can't afford to deprive your stock of this great blessing—you can't afford to turn down this liberal offer when many Agricultural Colleges, prominent breeders and hundreds of thousands of farmers will tell you it pays to feed Sal-Vet, especially since you can try it at my risk and without a penny of pay in advance.

Sidney R. Feil, Pres., THE S. R. FEIL COMPANY,
Mfg. Chemists, Dept. UPF Cleveland, O.

Send No Money Just the Coupon

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO.
Dept. UPF Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

Don't buy "Sal" this or "Sal" that. Get the original, genuine Sal-Vet prepared only by the S. R. Feil Co., Manufacturing Chemists, Cleveland, Ohio. Don't be deceived by imitations.

S. R. Feil, Pres.
THE S. R. FEIL CO.

Read What SAL-VET Users Say:

"Hog cholera broke out all around here, but not one of my hogs became sick. I cannot praise 'Sal-Vet' sufficiently, and I do not hesitate to recommend it to all swine raisers."—J. E. Strobil, Rt. No. 1, Box 15, Lohman, Mo.

"Have used 'Sal-Vet' on two of my horses and notice a marked improvement in their condition. They have passed a large number of worms and are now picking up in flesh."—Wallace W. Case, Rock Hill, N. Y.

"I am a large user of 'Sal-Vet' and we have a large flock of Shropshire sheep, and our farm is, as you might say, sheepled to death; we are not bothered in the least with worms. Out of 191 lambs that we had dropped this year, we lost only one, and that death was [not caused by worms]."—Henry L. Wardwell, Springfield Center, N. Y., Ex-President of American Shropshire Association.

"I honestly believe that the hundred pound keg of 'Sal-Vet' which I fed, paid me a profit of \$75.00."—R. J. A. Swafford, Litton, Tenn.

"As soon as the 'Sal-Vet' was received, we began feeding it at once to our sheep, that had been dropping off with no warning whatever. Am glad to say that we have lost only one since that day, but no more. Horses, hogs and cattle have done splendidly since having free access to 'Sal-Vet' and I am free to say that I never had better success with any preparation, than I have had with yours."—J. B. Burrows, Decatur, Ill., Director 19th Congressional District Illinois Farmers' Institute.

PRICES 40 lbs., \$2.25; 100 lbs., \$5.00; 200 lbs., \$9.00; 300 lbs., \$13.00; 500 lbs., \$21.12. Special discount for large quantities. No orders filled less than 40 lbs. on 60-day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. 60-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular pkgs.

Mr. Feil is a Registered Pharmacist, a graduate of the Cleveland School of Pharmacy and of the National Institute of Pharmacy. He has been engaged in laboratory work for more than 25 years and was formerly assistant to Dr. Nathan Rosewater, former Chemist of the Ohio State Dairy and Food Commission, for many years has been engaged in compounding veterinary remedies.

400,000 Settlers a Year

Immigration figures show that the population of Canada increased during 1913, by the addition of 400,000 new settlers from the United States and Europe. Most of these have gone on farms in Manitoba, Saskatchewan and Alberta.

Lord William Percy, an English Nobleman says:

"The possibilities and opportunities offered by the Canadian West are so infinitely greater than those which exist in England, that it seems absurd to think that people should be impeded from coming to the country where they can most easily and certainly improve their position."

New districts are being opened up, which will make accessible a great number of homesteads in districts especially adapted to mixed farming and grain raising.

For illustrated literature and reduced railway rates, apply to Superintendent of Immigration, Ottawa, Canada, or to the Canadian Government Agent.

Face to Face With the Future

Being a Few Words on Particular Matters From the Editors to the Reader

Beginning the Race

WE ARE OFF on the first lap of the new year's race for the things we most desire to have and do. We made progress last year, all along the line. We should and will make greater progress before our spick-and-span new calendars are out of date and good for naught but to kindle the fire. Every forward-looking farmer, as our President would call the progressive man of the soil, is now maturing his plans for his work in the fields and amongst his stock—plans upon which his hopes are based. The wide-awake, observing farmer is learning more and more that business principles, the ones that govern the big business enterprises, as well as all the little ones that succeed, are the rules of action that bring greatest success to the farmer. Business men are talking more about efficiency than any other one thing. Efficiency cuts out waste time, waste labor, knows what it is doing, and why. It seeks constantly to do things in a better way. Efficiency is a good thing for us to study out on the farms. Efficiency does not mean to take an hour to save five minutes, but it does mean taking five minutes for study of some way to save an hour. It does not mean to spend a dollar to save a dime, but it does mean spending a few dimes to make dollars. We need efficiency, for it gives us the greatest results, and to get it we must read and study, think and plan, for both present and future. And the mission of this paper for the coming months will be to help the reader to find the newer and better way of doing things, so that greater profit will ensue.

Our Poultry Number

We have devoted as much space as circumstances would permit to a general survey of the farmers' opportunities in poultry keeping. The farm flock can be made to pay far better than it does on every farm, with scarcely any additional expense or labor. Here again it is a question of efficiency, of knowing how, in both production and marketing. The production of eggs should be better distributed—not so many all at once in the spring and early summer, and more in the winter. And it can be done. It is just a matter of proper breeding, rearing, feeding and housing, and the things necessary to accomplish the desired results are known by many and can be learned by all. The right way to begin is to keep a record of the flock.

What's What in Marketing

It would be amusing, really funny in fact, if it were not so serious a matter, to see how folks who get into print denounce the high cost of living and the present marketing system, and then say the producer and the consumer must get together and do something. But do what? That is the question. Not one of them seems to have an opinion on this important phase of the problem. Yet when one comes to analyze the things which alone can accomplish any result worth an effort, there is only one thing that can be done. There must be a system of reporting the supply and demand, so the supply may go as direct as possible to the nearest demand. To establish this system an organization must be effected amongst the producers, having shipping agents at all shipping points, and receiving agents in all markets. The only thing necessary is for the producers to know what to ship, how to ship, where to ship and how much to ship to each point. Only by a national organization can this information be obtained, and only through this information can the evils of the present marketing system be corrected. So why waste time? If all the farm papers, the several farm organizations and the Department of Agriculture will set themselves at the task of building the necessary organization for a new marketing system, the greatest and most needed reform of modern times will be an established fact in a short time.

Talk the remedy, gentlemen, not the disease, and the talk may accomplish something.

New Members of Up-to-Date's Family

During the past few weeks many thousand new homes have been placed upon our regular semi-monthly visiting list. Thousands of new readers will scan these pages to see what manner of teaching and encouraging the farm folks this paper is doing. We want to extend a hearty welcome to all these new friends, to say we are for you and with you in all good works, and to invite you to follow closely our line of reasoning and our plan of action on this greatest of all agricultural problems—the reform of the marketing system. We are giving a great deal of attention to it. Some of you may think too much, but so thoroughly have we investigated the matter that we know beyond all possibility of doubt that the greatest, most costly burden on the backs of our farmers today is our unwieldy, unfair, unscientific and terribly wasteful system of marketing and distributing the products of the farms. This paper was the first to discover the facts, and to advocate a simple but effective remedy for the evil. The entire country is now acknowledging that the evil exists, and demanding a remedy. The remedy awaits only the action of the farmers themselves. Applied, it will save the producers of any commodity thousands of dollars annually. A part of our task is to help apply the remedy to each community where UP-TO-DATE FARMING goes. So, friends, you who are taking your first yearly journey with us, we cordially invite you to study our plan and our work as it is set forth from time to time in these columns, and to give us your hand in helping to do for your community what we have done for so many others, and to finally establish the farmers in their rightful place and power in the business of the world. We are even going to congratulate you now on what great good is coming to you as soon as you unite with us in the real uplift of farm life and operation.

THE EDITORS.

SUPERIOR CORN PLANTERS

Plain or Fertilizer Styles. Runners, Single or Double Dics. Flat and Edge Drop Plates with each Superior Planter. Hoppers easily closed; always right, no matter when, how or where dropped. Center Reel—Self-Winding; Center Lift—Perfect Balance. Automatic Throw-Out. Two, three, or four Kernels to Hill Without Changing Plates. Self-Adjusting Valves. Accurate Drop. Also furnished as a Two-Row Corn Drill. Simplicity and Great Strength.

If you think of buying a Corn Planter, be sure and send for the Superior Corn Planter Folder and then go to your implement dealer and insist on seeing the Superior—"The Name Tells a True Story."

Remember, the Superior is sold under such a warranty that you run no risk in buying.

THE AMERICAN SEEDING MACHINE CO.
INCORPORATED
SPRINGFIELD, OHIO, U.S.A.

New Labor Saving Farm Machine

This 14-attachment tool sharpening outfit is a big saver of time. It sharpens and polishes all farm tools quickly and keeps them in shape. Attachments and tool rests make all kinds of difficult sharpening easy and save lots of time.

LUTHER FARM TOOL GRINDER

has extra attachments if wanted, such as milk tester, horse clipper, jig saw, rip saw, forge attachment, etc. Saves the expense of taking many jobs to town. Fitted with Dime-Grit wheels that make 3000 revolutions per minute, no need of cooling with water or danger of drawing temper. Sent on 30 days free trial if desired. Write for 40-page free book which explains all about this new labor saving machine.

Balanced Rations

The Equity Press!
It is easy to guess
The light that is flowing from it.
Then open the gate
Wide to UP-TO-DATE—
The million we're going to get.

Let's make this the best year we've ever had.

If farmers want a "pull," let them pull together.

Cold storage on the farm? Sure. Fill the ice house.

The man who pays as he goes can usually keep going.

Sam Saxon says it is no small job to wind up a run-down farm.

One egg in January is worth three in April, but the hens don't know it.

UP-TO-DATE FARMING makes a good alarm clock for a sleepy community.

If you want a good stand of alfalfa, sow on well-worked ground in July or August.

If you train up the boy in the way he should GO, how can you expect him to STAY?

The average farm owner makes more money raising the price of his farm than he does raising crops.

Now is the time to complete your poultry plans for the year. This issue is full of helpful suggestions.

"Mary had a little lamb," but as soon as the tariff bill passed Mary sold it. Was she wise, think you?

Keep that community club idea in your mind, for you are going to have one, sooner or later. You need it now.

When you begin telling the other fellow what to do, why not tell him what you have actually done? The proof of the pudding, etc.

Did the beginning of 1914 find your farm in better condition, for both pleasure and profit, than the beginning of 1913? If not, whose fault is it?

Instead of being the death of the express companies, the parcel post has put new life into them. Too much prosperity isn't healthy for any one.

Nearly all successful people in all walks of life were readers of good books in the days of their youth. How about a good library for the country school?

It's hard work and an uphill job to make farming go, unless you are willing to go downhill, but there's room at the top and ruin at the bottom, so let's go onward and upward.

The large meat packers make an average profit of one-fourth of a cent a pound on the meat they sell, states a good authority. Now just who IS to blame for the high price of fresh meats?

Laugh at scientific farming if you will, but remember that science has driven the cattle tick and Texas fever out of large sections of the south, where the farmers-by-experience-only were helpless.

The two big problems in farming are to make good yields and then get good prices. Some farmers spend all their time with the first, but none with the second. Rather lop-sided for a well-balanced business.

"Through Lack of Co-operation in Marketing the Farmer Opens the Gates of His Poultry Yard to the Speculator and Manipulator."

Eggs---Production, Storage and Price

EGGs, at from 4 to 5 cents each, are a luxury only a comparative few can afford. Eggs at from 2 to 3 cents each would be within the reach of the average man. But eggs will not be produced in large quantities unless the owners of the hens that lay the eggs receive a reasonable price, and 20 cents a dozen is generally considered a reasonable price for fresh eggs on the farm.

By far the greater portion of the eggs sold in the markets of city and town come from the farms where a flock of chickens are kept as a side line. The commercial egg plants supply the markets with a great number of eggs, it is true; yet as a rule such plants make a specialty of supplying a private trade and capture the best of the markets. The eggs the farmers sell, in spring and summer, when the farm fowls are laying (for farmers, as a rule, make no particular effort to secure winter eggs), go into cold storage, to be sold the next winter when eggs are scarce and high. The farmer receives from 15 to 18 cents per dozen, and a few months later consumers pay from 30 to 40 cents a dozen for them.

The consumer has a right to complain when he pays fresh egg prices for storage eggs. That is, he has just cause for complaint when he pays money for one article and then finds he has been duped. But he has no just grounds for demanding that the retailer sell his stock of eggs for less than he can obtain for them. As long as people will buy the eggs at 40, 50

or 60 cents a dozen, the merchant has the right to ask the price. Egg speculation is legitimate. Any man has a moral and legal right to buy eggs at the market price, store them and then sell at the market price.

The farmer has no right to complain that the speculators rob his henhouse of profit. Putting eggs in storage and holding for higher prices is a perfectly legitimate business. It is what the farmer himself should do. Through his lack of co-operation with his fellows he opens the gates to his poultry yards to the speculator. Then why lament if said speculator walks out with the profits?

There are three methods whereby the farmers of a community can make their poultry pay them larger profits, but co-operation is the one thing necessary in all these. First, the egg business of the community should be put on a systematic, business basis. Certain standards should be established. Eggs should be classified and graded according to standard before shipping. Second, instead of individually trading a couple of dozen unsorted eggs to the local merchant for groceries, the farmers should do their shipping co-operatively, in large lots, direct to the markets consuming the eggs, obtain the cash for them and then pay cash for supplies. Third, when eggs are plentiful and prices are low these co-operating community egg clubs should follow the lead of the egg speculator and put a part of the supply in storage and do their own holding for high prices when hens don't lay. That time comes each year with absolute certainty.

What Others Say and What We Think of It

"The last thing any farmer should do is to give up."—Wallace's Farmer. If he gives up there's nothing he can do; giving up is the finish.

"And still some farmers go on feeding 70-cent corn to unprofitable cows," says the Prairie Farmer. It takes a rattling good cow to give its owner a profit from corn at that price.

"I had rather be just a farmer than be possessed of much riches; yea, even of silver and gold."—J. Ralph Pickell, Editor. It's a cinch you can't be both, Brother Pickell, not at one and the same time.

"It is stated that this nation spends \$150,000,000 annually for patent medicines and an equal amount at the soda fountains."—Thomas Forsythe Hunt. Why not swap your farm for a drug store, Mr. Farmer?

"Out about Winchester, Tenn., farmers are raising alfalfa on a business scale."—Southern Farm Journal. And only a few years ago we all believed alfalfa would grow nowhere but in a deep, fertile soil!

"I have known men who seemed to think they were not enjoying life unless they cooked their stomachs and muddled their brains with bad whiskey."—E. M. M. Would better whiskey improve matters much, think you?

"It will take some scrambling to beat the egg trust."—Farm, Stock and Home. Yea, verily, but can't we hatch out a scheme and then lay for it? If once we could crack its shell wouldn't that be a feather in our cap—something to crow about, in fact?

"The people who are most loudly crying 'back to the farm' live in cities, and none of them could be dragged out by a team of elephants to live on a farm."—Secretary of Agriculture David M. Houston. They turn their backs to the farm, so to speak.

"Politicians act as though the American farmer is an imperative subject for financial aid, and an applicant for charity, but a certain small group of farmers could buy and sell all the politicians in the United States."—New York Press. You must mean buy the cheap politicians, don't you.

"We ought to learn something from the Romans. Their empire is gone, their language is dead, but their roads still endure. They understood good roads and they built them."—Champ Clark, Speaker of the House of Representatives. But, Mr. Speaker, what's the lesson? That good roads may bankrupt a country?

"It is an important part of a boy's training to let him earn money to buy his own clothing and for his personal expenses. He should be consulted also in the sale and purchase of farm products and supplies. This will lead him to consult the market page of the daily paper with as much zeal as the sporting page."—The Ohio Farmer. True, but the market page is sometimes pretty discouraging reading.

On What Farm Wages Depend

THE INCENTIVE to labor is the benefit derived from it or the wages received for it. Hence the laborer whose reward is uncertain is not in an enviable position, and he is very likely to seek another line of work. The wages or reward of the farmer in money depends upon the price he receives for his surplus products. And not only so, but if the farmer hires help he must do so at the risk of what the additional labor may be worth to him, and that, too, depends upon the price he may receive for his stuff. Of course, quantity figures in this matter as well as price, but quantity is a matter of natural doubt, and depends upon industry, judgment and nature, and with these elements we must leave it. Whether the quantity be great or small the income, the wage, depends upon the price.

Under the present marketing system there is nothing else in business so indefinite and uncertain as the price the farmer is to receive for his products. From a single paper of recent date, we make the following quotations from market headings in the public press: "Snowfall checks the advance in wheat." So the price of wheat depends upon whether it snows or not. "Needed protection to winter crop in west and southwest sends down prices." If snow covers the growing wheat in that part of the country every bushel of wheat the farmers of the whole country have for sale is worth less money than if it had not snowed in that perhaps distant region. "Bearish government report chief factor in grain—speculation very light." In market language "bearish" means something that pulls down the price. Therefore the government report pulled down the price and made every wheat owner poorer than he was before the report was issued. "Argentine weather

aids wheat bears—improved conditions for windup of harvest season in republic sends prices down." Thus it appears the price of wheat in this country depends upon the weather in a distant country of South America.

Near the close of the year the Department of Agriculture held a conference to determine whether existing rules should be changed so as to admit the shipment of potatoes from other countries into this country. Why was it desirable to bring them in in spite of the potato diseases they were likely to bring with them? "Members urged that it would be wise to permit the entry of foreign potatoes in the hope of reducing high prices of food"—of potatoes. Also that "the exclusion of foreign potatoes would go far toward raising prices in the United States." Hence the whole purpose was to lower the price of American potatoes, and every cent of such reduction lessened the reward the grower was to have for his labor. Like conditions, like doubt, applies in one way or another to every product of the farmers' soil or pastures.

Could there be a more doubtful business so far as profits are concerned? Is it any wonder that people drift from the farms to other forms of labor? Could any other business on earth continue if attended by such doubt as to financial reward? Would the merchants, manufacturers and mine operators submit to anything of the kind? Why do public men and official departments, even those ostensibly in the interest of agriculture, support such conditions and add to the doubts as to the financial rewards for farm labor when they do not pretend to do so as to any other kind of labor? Why do the millions of American farmers submit to it? Answer these questions and the world may realize that it is necessary to do something, and to do it now.

An Example of How It Works

EARLY in 1912 the courts ordered the Lehigh Valley Railroad Company to dispose of its coal business under the commodities clause of the Hepburn rate law. This clause prohibits transportation companies from carrying their own commodities in competition with like commodities owned by others, on the ground that, if permitted to do so, the company could make discriminating rates that would prohibit the shipment of the competing commodities and give the owners and carriers of their own material a monopoly of the market at the other end of the line. The Lehigh Valley Railroad Company owned and operated vast interests in the anthracite coal mines, and it was proven that in the shipment of coal that belonged to others they made such rates and thus prevented the shipment of coal to sell in competition with the railroad company. It was for that reason the court ordered the railroad to dispose of its coal interests. Of course, the railroad company obeyed the order, just as the trusts and combinations always do. The Lehigh Valley Sales Company was organized, with a capital stock of \$6,000,000, which, we are informed, was created by declaring a dividend on the stock of the railroad company and paying it in stock of the new company. Thus was the new company owned and controlled by the same people that owned the railroad. Hence the railroad company was as much interested in the shipment and sale of the coal as it was before the order of the court was made, or before the new company was organized, and it could make just as extortionate rates. The new company, of course, had to pay the rate, but it was only paying it to themselves, and the monopoly in the coal trade was unbroken.

To satisfy the public, however, an

army of expert accountants have been employed to compile figures showing every item of expense in the production and distribution of a load of anthracite coal from the time it is dug out of the pits until it is delivered in the bins of those who use it. Of course, these figures make it appear that prices are not exorbitant and that profits are small—almost insignificant.

Yet it appears, according to the authority from which we get our information, that the Lehigh Valley Coal Sales Company, apparently merely a side name for the Lehigh Valley Railroad Company, has declared a special dividend of 25 per cent, applicable for payment at \$50 a share on the new stock, worth \$120 in the market, and it paid 12½ per cent in dividends last year. Quoting from a conceded authority, this new company carries on the same old business in the same old way, except that it goes through the form of buying the coal it sells from the Lehigh Valley Railroad Company. Hence the stockholders of the latter company, being the same as the stockholders of the new company, receive these additional dividends and stock amounting to not less than \$10,000,000 in two years purely as profits arising from the marketing of coal, and all without having made a penny's outlay in real money.

Not many of our readers are interested in this special case, but we give it as an example. Congress and the courts seem unable to reach such cases. The high price of anthracite coal remains, and so does the high price of all other commodities that have gone into monopoly control, and it is no wonder there is high cost of living. Legal control of greed is impossible, because effective greed is always accompanied by shrewdness. These elements combined are always able to evade the laws and defy the courts,

no matter whether it is in the control of coal or of bread and meat. The remedy is in a change of the system of marketing and distribution. This must be brought about by the people acting unitedly, harmoniously, co-

operatively. They must market to supply need and not to make millions of monopolists. In this matter every reader—every producer and consumer—is interested, and each must aid in the work.

Effect of "Redeemable in Gold"

MONEY is a medium of exchange. It enables people to buy and sell without the tedious and unsatisfactory process of swapping commodities. Anything may be swapped for its value in money, and the money may then be swapped for some other desired commodity of equal value. The essential element of money is that it have a definite and unchangeable value—that a dollar, or anything legally used as a dollar, will always buy a dollar's worth of whatever is for sale.

To secure that kind of money, as its advocates claimed, gold was made the "standard of value" in this country, and that gives the metal gold a "special privilege," creates a use for it by law that it could not have without the law, and that undoubtedly increases its value. Nothing is money but gold, and nothing must be issued or used as money unless there is a promise that something somewhere will redeem it in gold—swap gold for it dollar for dollar. Hence, if this special privilege, this law-created demand or use for gold, adds anything to the commercial value of that metal, that much of a gold dollar is fiat money and every dollar so redeemable must carry for the gold owner that much profit whether it ever be redeemed or not. From an article by Mr. D. L. Braucher of Lincoln, Ill., a careful student of money, we quote as follows:

Prior to 1873, when we denied the monopolistic privilege of free coinage to silver, it stood 3 per cent above gold at our present ratio of 16 to 1. This relation was sustained during a period of forty years, or from the time we changed our ratio of 15 to 1 to 16 to 1. The price of silver began falling immediately after it was denied free coinage, and it stands now at 59 cents to 61 cents, an average of 60 cents an ounce, and it may fairly be assumed that gold would decline in like manner if it were treated in the same way.

The coinage value of silver is \$1.29 per ounce, and that of gold is \$20.67 per ounce. The price of gold then, without free coinage, would be \$9.39 per ounce. We are, therefore, by law, adding \$11.28 per ounce to the price or mercantile value of gold, and that proportion of every gold dollar is fiat money, without value other than that created by law. Hence, when we tie our currency to the "gold standard of value," 55 cents of every dollar of that currency is a profit or premium the law confers upon the owners of gold. How, then, shall we keep our new currency on a par with gold? Make it a full legal tender for all debts, both public and private. It will then be redeemable on demand and in any and every commodity produced in the United States, including both gold and silver bullion at their market value.

We give place to the above not for the purpose of provoking a discussion of the intricacies of the money question, but to elicit thought. There are many things to think about in these days of progressive thought and action, when the masses of the people are becoming restless as they note the special privileges conferred upon some, but denied to the many. Each day brings a more imperative demand for "Equity in all the business affairs of life."

An Ominous Showing

WE HAVE several times referred to the fact, and given proofs, that taking tariff protection from farm products would bring the products of other countries into our home markets in competition with home products, to the manifest injury of the farmers of the United States. We now have most startling figures to this effect from the National Department of Commerce and Labor. The number of cattle imported into this country from abroad during the month of October last was 130,639. The number so imported in October, 1912, was only 27,696. That year the importers had to pay a tariff duty on every animal brought across the line. Last October they came free. Note the difference. The number of sheep brought from abroad last October was 26,035, against 3,466 during the preceding October. The fresh beef brought across the line last October was 5,677,461 pounds, whereas during the entire three months of October, November and December, 1912, no more than 637,095 pounds were imported. If that tremendous importation would reduce the price of meat to consumers there would be at least that much excuse for it. But meat buyers realize that it does not, because the imported meats are as much under the control of the monopolistic packers as are the meats prepared in this country. This tremendous addition to their supply, however, will reduce the price to be paid for American meat stock.

Of corn, which now comes in free of duty, there was imported during last October 473,259 bushels. During October of 1912 there was imported only 226,471 bushels. The importers had to pay a tariff duty then. The new law did not put onions on the free list, but it reduced the duty one-half. This reduction brought into the United States during last October 120,487 bushels of onions, against only 86,361 bushels during October, 1912, when twice the present duty had to be paid.

The total importations of wheat in October, 1913, was 233,217 bushels,

more than four times what was imported—52,213 bushels—during the preceding October. Of potatoes, 472,052 bushels were imported, against 9,881 bushels during the same time the year before.

The figures given are of a single month's importations. What may be expected during the year? These figures show what the farmers of the United States are up against. Every American agricultural teacher urges the production of more stuff—of more cattle, sheep, corn, wheat, potatoes, onions and all other products. The price paid the farmers depends upon the quantity on the market; and, whether our farmers produce much or little, they know there is the equivalent of a bumper crop ready to meet theirs from over the line to glut their markets and cut down their prices. It is a discouraging feature. There is no denying that, and the only remedy we can see is a marketing system that will meet the demand direct, and independent of the central markets.

PRODUCTION CURTAILED BY LUMBERMEN

IN A TRIAL of the lumber trust in Missouri last month it was proven that in June, 1904, the trust ordered a curtailment of production for ninety days. This resulted in a great increase in the price of lumber, and by that means the trust increased its profits \$2,210,000.

Say what we may, all manufacturers control the production as well as the marketing of their products. But the masses of the farmers have only one idea presented to them, and that is to produce the greatest possible quantity of stuff, and hurl it upon the market as nearly as possible all at once. That is what the schools teach them and the authorities urge them to do. Hence farm profits are small, and the schemers wish to arrange for the farmers to borrow on their homes what they lack in profits—profits that are theirs for the taking.

Shrinkage of Cattle in Shipment

THE UNITED STATES Department of Agriculture very recently issued an elaborate statement on the "Shrinkage in weight of beef cattle in transit." We quote the introductory paragraph:

The shrinkage or loss in weight of beef cattle in the course of shipment from western farms and ranches to the markets has been made a subject of special study by the Department of Agriculture, and what is believed to be the first authentic information on this subject has been compiled. The investigation covered three years in various cattle-raising sections of the west. The cattle were weighed at the point of loading, on arrival at their destination and again after having rest, feed and water. The weight was also taken when the animals were sold. The records include the weighing of Texas and northwestern ranch cattle and calves, and of corn-fed, silage-fed and beet pulp-fed cattle. In all 265 shipments were weighed, comprising over 19,000 cattle. Many of these shipments were several days on the road and in such cases were weighed at the unloading points as well as at the first shipping point and at the market.

We make this quotation to give our readers an idea of the elaborateness of the work the Department has done to determine the loss in weight cattle may sustain from the time they are bought from the farmers and stockmen until the shipper sells them in the final market. Three years of investigation and study! Wonder how many Department "experts" were employed in this three years' work, and how much it cost the people of the United States? Whatever that cost was it must have added to it the cost of preparing and mailing out the statement from which we quote.

Every seller and buyer of cattle knows live stock shrink in weight in transit or during shipment, and buying prices are made accordingly. But who is most interested in that loss of weight, the farmers and stockmen who sell at home or the buyers and shippers? The buyers, of course, and this three years' work of the Department of Agriculture is almost solely for the benefit of the buyers and not for the farmers. It says to the buyers, "Be careful. The stock you are buying will shrink in weight before you get it to market, and if you are not careful you will pay too much for it." Not long ago the Department issued a report of a similar investigation of the shrinkage of corn, which was nothing less than a warning to the buyers to be careful or they would buy water when they bought corn.

The Department's work seems largely, almost entirely, in the interest of the buyers of farm products rather than in the interest of the producers and original sellers of them. We have looked in vain for a document telling the farmers how to sell in order to get the most money for their stuff, or how to distribute so as to best supply the demand and secure the largest possible use of their products. It is all a warning to the buyers, even including the speculators, to be careful not to pay the farmers too much.

It is well enough for these possible losses to be known, that even the farmers should know them, but the buyers are the ones most benefited by this Department work, and the government has a department more specially devoted to that interest, but it is not the Department of Agriculture.

"But," says a friend at our elbow, "will not the secretary cut you out if you persist in telling these truths concerning the work of the Department of Agriculture?" Perhaps so. But we have a duty to perform as well as he has. Our mission is to teach farmers how to make farming profitable; how to supply all demands and at all times receive equitable prices for their stuff, so as to make farming not only the most essential, but also an attractive business, and the Department of Agriculture should work to this end also. It was created for that purpose, rather than as a guard and protection for the buyers.

Company One Keeps

Realizing that the old adage, "One is known by the company one keeps," applies to advertisements as well as men, the publishers of UP-TO-DATE FARMING wish to call your attention to the character of the copy appearing in this issue. No medical advertising. No fake advertising. All advertisements reliable. See our guarantee of reliability below.

A. H. Ludwig

Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

The Mistake They all Make

SECRETARY of Agriculture Houston, in an excellent address before the boy and girl champions of the corn, potato, cotton, canning, gardening and poultry clubs of the United States, took occasion to say: "Think what it would mean for this nation if most of the farmers, or many of the farmers, could secure a yield of corn equal to that which your champion corn producer has given the country, 232 bushels of corn (per acre) at a cost per bushel of less than 20 cents."

Sure enough, what would it mean? We shall deal entirely with Mr. Houston's figures—at least with figures from the Department of Agriculture. Take first the great corn state of Illinois. The yield per acre in 1912 was forty bushels and the total yield was 426,320,000 bushels. The price December 1, 1912, was 41 cents, and at that price the crop was worth \$174,791,000. The yield per acre in 1913 was twenty-seven bushels, and the total yield was 282,150,000 bushels. The price December 1, 1913, was 63 cents, and at that price the crop was worth \$177,754,000. Here we have in the state of Illinois a crop 144,170,000 bushels less than the crop of a year before, but the smaller crop was worth to the farmers \$2,963,000 more than was the much larger crop of the preceding year. Thus a difference in yield of thirteen bushels per acre made a difference in price of 22 cents per bushel in favor of the smaller yield.

But this is only a state. How was it in the whole country? The total yield of corn in the United States in 1912 was 3,124,746,000 bushels. The price December 1, 1912, was 49 cents a bushel. At that price the crop of 1912 was worth in money \$1,520,454,000. The total yield of corn in the United States in 1913 was 2,446,988,000 bushels. The price December 1, 1913, was 69 cents per bushel. At that price the crop of 1913 was worth in money \$1,692,092,000, or \$171,638,000 more than the crop of 1912, though it was 677,758,000 bushels less than the preceding crop. The yield per acre in the United States in 1912 was 29.2 bushels, and in 1913 it was 23 bushels. Therefore a difference of 6.2 bushels per acre makes a difference of 20 cents per bushel in favor of the smaller crop. What, then, would it mean if "most of the farmers, or if many of them," could raise the yield to 232 bushels per acre? That is a little more than ten times the yield of 1913, when the price was 63 cents a bushel, and it is eight times the yield of 1912, when the price was 49 cents a bushel. If a raise from 23 bushels per acre to 29.2 bushels per acre reduces the price from 69 cents a bushel to 49 cents a bushel, what would be the price if the yield were raised to 232 bushels per acre? A few figures will make it clear: Each bushel of increase cost the farmer about 3 cents per bushel in price; for each additional bushel per acre of gain in yield he lost 3 cents in price on that, and all his other bushels. If the average yields are increased to,

say 60 bushels per acre, an increase of 30 bushels over the yield of 1912, and the price came down even 1 cent per bushel for each bushel per acre increase, it would cut the price from 49 cents to 19 cents. If the secretary's figures do not say this, what do they say?

And this is not the only crop that has passed through that same experience. It is an invariable fact that the greater the production the lower the price, and it is often the case, as above, that a bumper crop is worth to the farmers less money than a smaller crop that has preceded it. Is our argument, then, for small crops? Not at all. We wish the farmers to do their best. We want the fertility of the soil maintained and increased. We favor abundant production, but we want to know that there is a demand for all that is produced. We want a marketing system that will find the demand and satisfy it, so that the extra bushels grown will not reduce the price so as to make the whole crop worth less. This is what we are trying to get agricultural officials and teachers to understand and work for. Don't use the farmers as the monkey used the cat, as a thing with which to pull its chestnuts out of the fire, Mr. Secretary Houston.

What Country Schools Teach Farmers' Children

PRACTICALLY every American-born farmer in the United States today received a part of his education in the little one-room district schoolhouse. There he studied, among other things, a deal of matter he never found use for in his life work. Not half of this school education is practical education, except to those few who later go into certain professions. Over half of the time, then, that the average youngster on the farm spends in the average country school is time forever lost—worse than wasted. It is very valuable time, too. For years educators who are long-headed and far-sighted have seen the insufficiency of our old system of education and have warned us, but recently the rapidly growing need for knowledge and skill and trained workers in the everyday affairs of men has commanded our attention. Now a great wave of progressive ideas seems to be sweeping the country, and both in the city and in the rural schools a new idea in education is being brought into play. How to do things with one's hands and with materials is being taught. Along with the essential parts of their other studies the country boy is to be taught things about plants, soils and live stock which will give him a real insight into the principles of agriculture. So, in time, the country school will have, in addition to wall maps, globes, charts, blackboards and chalk, a poultry coop, a pig pen and, perchance, a stall for a cow, as part of its paraphernalia. Hoes and rakes will be as important as pencils and slates. The household side will not be overlooked, and the

mixing bowl, the rolling pin and the needle and thread will be utilized by the schoolgirls. Practical education is to become the order of the future.

One of the first steps taken in this direction has just been made by the Union Stock Yards of Portland, Ore., which will give a pig to every city or country school in the states of Washington and Oregon that wants one and will care for it. The only condition attaching to the gift pigs will be that each school accepting one keep an accurate record of the kind, quantity and the cost of the food that is given it. This will be for the purpose of determining the cost of feeding and preparing a pig for market.

It is expected that the pigs will be sold when they reach a marketable size. The stock yards will buy them back at the market price and the schools can use the money as they choose.

Stock yards officials expect the boys and girls of the various schools to compete for the distinction of making the most money out of their pork stock.

Smile Awhile

Changed the Process

Wife—I am sure you have ceased to love me.
Husband—No, dear, I have only quit making it.

Rightly Named

"So you have been on an outing?"
"Yes, I am out \$35."

Living Up to It

"I understand Bill Smith is a vegetarian."
"Yes, and he is so set in that idea that he married a grass widow."

Certain Danger

"Is Ben Jones out of danger yet?"
"No, I see the doctor still goes there."

Not So Far to Go

"I see Dr. Cook has gone into vaudeville acting."
"Well, that is not near so far as to the north pole."

It Is Sometimes So

"There were straight issues in the recent campaign, were there not?"
"Yes, straight whiskey!"

That's So

"What could be worse than a man without a country?" asked the aunt sentimentally.
"A country without a man," replied her niece with just as much sentiment.

The Main Attraction

"Do you believe women should take up farm work?"
"Of course. What is more attractive to them than husbandry?"

They Didn't Like It

Pastor—Providence has seen fit to afflict our choir with bad colds, so they can not sing today. So let the congregation unite in singing "Praise God, from whom all blessings flow."

A Mortgage Lifter

"Father," boasted the farmer's son, home from college for over the holidays, "I'm the strongest man in our college this year."

"You don't mean to tell me!"
"Yes, they tested me with different kinds of strength-testing machines in the gymnasium and my record shows that I'm the strongest student enrolled there this year. The physical director says I'm a modern Hercules."

"My son, I'm glad to hear the good news. Instead of going back to college you can stay home here and help me lift the mortgage on the farm."

Perhaps It Needed Spraying

"What do you think of my family tree?" he asked, as he pointed to a long list of ancestors.

"The tree seems all right," was the reply, "but it don't appear to have borne very good fruit."

Risen in Their Estimation

"They used to throw flowers at that man, but now they throw eggs at him."
"And eggs at 50 cents a dozen! I tell you he must have become awful popular."

Different Diet

Mrs. Quizzical—Did you have prayers when the preacher came for dinner?
Little Girl—No, we had fried chicken.

OUR MARKET REVIEW

Semi-Monthly Review of Crops Markets and Trade

A GENERAL SUMMARY of the year 1913 is given by Bradstreet's as follows:

Liquidation begun in 1912 continued. Balkan war revealed over-borrowing abroad. Gold hoarded in central and eastern Europe. Military preparations. Foreign selling depressed American securities. We lose gold instead of importing it. Legislative disquietude at home. Domestic trade and inquiry active early, tapers off. Crop shortages and tariff changes. Record foreign trade.

"The most successful year of husbandry in the United States" is the label put on the record of 1913 by the Department of Agriculture.

This is from the financial viewpoint, and in face of an enormous decrease in the quantity produced, influenced by the most widespread and severest drought the country experienced in many years. The Department report says: "A new high record in estimated value is made by the total of all cereals, and separately by corn, cotton seed, tobacco and sugar beets. Only once has there been a higher estimated value of oats, rye, rice, potatoes, hay, hops and the total of beet and cane sugar. Only twice has the estimated value of wheat been exceeded.

The final figures for the important crops are shown in this table, together with some comparisons with the 1912 crops:

Crop	Value	1913	Production	Value	1912	Production
Corn	\$1,692,000,000		2,447,000,000 bush.	\$1,520,454,000		3,124,746,000 bush.
Cotton	798,000,000		13,667,000 lbs.	822,290,000		13,820,000 lbs.
Hay	797,000,000		64,000,000 tons	468,578,000		54,874,000 tons
Wheat	610,000,000		763,000,000 bush.	555,280,000		730,267,000 bush.
Oats	440,000,000		1,112,000,000 bush.	452,469,000		1,418,337,000 bush.
Potatoes	228,000,000		332,000,000 bush.	212,550,000		420,647,000 bush.
Tobacco	122,412,000		953,734,000 lbs.	104,063,000		962,855,000 lbs.
Barley	96,000,000		178,000,000 bush.	112,957,000		223,824,000 bush.
Sweet potatoes	43,000,000		59,000,000 bush.			
Sugar beets	34,000,000		5,834,000 tons			
Sugar cane	21,000,000		6,150,000 tons			
Dairy products	\$14,000,000					
Wool	51,000,000		314,000,000 lbs.			

Especially attention is called to the great difference in the yields of some of the crops and their values. We find that the first eight crops in the table were valued at \$4,248,641,000 in 1912, when they were very large, and at \$4,783,000,000 in 1913, when they were short because of drought. The difference is \$534,359,000, or 12.5 per cent of the value of 1912. The average net income per farmer in 1913, after deducting for crops retained on the farms, is estimated by the Department, in its report, as \$900.

The weather for wheat and grass continues generally favorable, with snow covering much of the northern area. The visible supply shows a large increase for the two-weeks period, while prices range just a little higher. Exports of wheat and flour at the present time are very heavy. For the twenty-six weeks ending January 1, 1914, they were 30,000,000 bushels more than in 1912. Wheat is on a world's basis for price and the future price will depend on the whole supply compared with the whole demand and future prospects for the 1914 crop. The conditions now are gener-

Separating the farmer from his profits.

ally against any immediate material improvement in values. Crop damage, or rumors of them, are the most likely factors now for an upturn.

The visible supply of corn scored a big increase since our last report and prices tumbled sensationally at Chicago, but are well maintained elsewhere. At St. Louis the price is 3 cents higher. Argentina, the principal competitor of the United States in corn, is reported to have a record-breaking crop in sight. As there is no duty on corn now the price must be on a world's basis and we may expect to find the highest prices in the mid-west states, where the crop was short, and comparatively low in the eastern markets, where influenced by the Argentine values. The price is lower now in New York than in St. Louis.

Oats visible remains about stationary and not much change in price.

Cotton prices are lower. Ginning reports are still such as to indicate that the crop may be larger than yet reported, which has a depressing effect on prices. In this issue we give some figures of movement of the crop and visible supply.

The potato situation is assuming a normal condition based on home supply and demand, since the Department of Agriculture has decided to not lift the embargo against powdery scab, effective against some countries, but has extended it to include other countries. The embargo now covers all Europe and Canada, unless any section or sections show our government agents that they are free from the disease, when the quarantine for that district or districts will be lifted. Since our last report the price of potatoes has advanced 15 to 20 cents a bushel. There are enough potatoes in this country to supply the home demand and the raisers now stand a good show to get a profitable price for them.

Sweet potatoes were a larger crop than last year. More than the usual quantity went to storage and prices have ruled low. With higher prices for Irish potatoes, sweets are also advancing, particularly for the southern products. Beans are lower. Hay is lower. Broom corn unchanged. Egg prices are up to the weather. Any warm spell will quickly be followed by an increased production and lower prices. Foreign eggs are arriving in both our eastern and western ports. Just what effect foreign eggs will have on prices can not be determined now. We hardly think they will make spring prices lower, but may prevent winter prices from going as high as in the past.

Advice

Wheat—We expect prices to be higher, but the future all depends on crop damage or lack of it. If a bumper crop is harvested in this country, and other countries in the northern hemisphere have good crops in 1914, we will very likely have the lowest prices since in the 1890's. **Corn**—Don't sell if your buyers have followed the Chicago market. Our readers in the western drought-stricken states want to buy corn direct from the growers. If such will report what they have to sell we will connect the two. It will not be profitable to consider less than car loads. **Oats**—We expect higher prices. **Cotton**—We do not advise selling at present prices. **Beans**—We believe they will bring more money. **Potatoes**—Market gradually. The National Clearing House of the Farmers Society of Equity is in daily touch with markets and will wire or mail definite marketing instructions on request.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Dec. 27, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Dec. 27, 1913	Change from two weeks before
WHEAT	71,086,000	X 2,395,000
CORN	9,953,000	X 5,446,000
OATS	32,413,000	— 225,000
BARLEY	8,462,000	— 177,000

The visible supply of wheat in Canada on the same date was 55,635,000 bushels. This is 6,443,000 bushels more than two weeks before and 5,251,000 bushels more than a year before. The visible supply of oats was 17,389,000 bushels on the same date, which is 7,465,000 bushels less than two weeks before and is 9,240,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Jan. 3, 1914, two weeks before and a year before as follows:

WHEAT, No. 2 RED			
	Jan. 3	Two weeks before	A year before
Chicago ...	96 @ 96½	95 @ 96	1.10 @ 1.10½
St. Louis ...	97 @ 97½	93 @ 96½	1.09½ @ 1.10
Kas. City ...	91 @ 92½	90 @ 91	1.03 @ 1.06½
Cincinnati ...	90½ @ 91	88 @ 89	1.12 @ 1.14
New York ...	90½ @ 91	1.00 @ 1.01	1.07 @ 1.08
Minneapolis—Spring wheat—No. 1 hard, 88½ @ 89c			
No. 1 northern, 86½ @ 88½c. Two weeks before, 87½c and 83½ @ 85½c respectively. A year before, 84½c and 82½ @ 84½c respectively.			
CORN, No. 2 WHITE			
	Jan. 3	Two weeks before	A year before
Chicago	62	70½ @ 70¾	46½ @ 47
St. Louis	72 @ 72½	69	49

	Jan. 3	Two weeks before	A year before
Chicago	38½ @ 39	38½ @ 38¾	34 @ 34½
St. Louis	40 @ 40½	42	35 @ 35½
Kansas City	40½	40½	34 @ 35
Cincinnati			36 @ 36½
New York			35½

Read Wheat Prices at Right, Corn and Oats at Left
This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to December, 1913, inclusive. The lowest figures in December, 1913, were: Wheat, 94½c, on December 2; Corn, 68c, on December 28, and Oats, 39c, on December 27.

Future Grain Prices

Chicago grain futures closed on January 3, 1914, and two weeks before as follows:

Wheat—May, 91½c; July, 87½c. Two weeks before, 91½c and 87½c respectively.	
Corn—May, 68c; July, 67½c. Two weeks before, 69½c and 68½c respectively.	
Oats—May, 40½c; July, 39½c. Two weeks before, 41½c and 41½c respectively.	

Cotton

New York, January 6.—Cash cotton closed as follows: Middling uplands, 12.40c; middling gulf, 12.65c per pound. Two weeks before the price was 20c a cwt. higher. A year before the price was 90c a cwt. higher.

MOVEMENT OF COTTON—BALES

	Ending Jan. 2, 1914	Ending Dec. 26, 1913	Ending a Year Before

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	25	40	42
Tuesday	25	20	43
Wednesday	20	25	57
Thursday	25	25	93
Friday	25	25	50
Saturday	50	30	63
Total 6 days	145	140	291
*Holiday.			

Market was active and buoyant at recently advanced prices. Buyers took hold freely and the market was in a healthy condition at the prices. Receipts were reported at 50 cars, which included several cars in late yesterday and held at outlying yards.

Sales reported were: Per bushel—Bulk, Wisconsin—1 car poor at 67c, 6 cars at 70c, 6 cars at 72c. Sacked—2 cars at 70c, 2 cars at 71c, 1 car at 72c, 1 car at 73c. Bulk, Michigan—1 car at 70c. Per bushel—Wisconsin round white or Burbanks, bulk or sacked.....67@73c Minnesota.....65@70c Michigan.....68@73c Idaho Pearls.....85c Oregon Pearls.....85@90c

NEW POTATOES—Moderate sale. There is a fair supply and the market is weak. Barrels—Bermuda Reds, quoted at.....\$6.50@7.00 Hampers—Florida Reds, ordinary, dirty, held at.....2.00

The price of Wisconsin, Michigan and northern potatoes is 15c to 20c a bushel higher than two weeks before.

	Dec. 27, 1913	Change from two weeks before	Change same period last yr.	Change from a year before	Change from 2 years before
WHEAT	71,086,000	X 2,395,000	X 1,726,000	X 399,999	— 5,977,000
CORN	9,953,000	X 5,446,000	X 2,938,000	X 3,053,000	X 3,151,000
OATS	32,413,000	— 225,000	— 500,000	X 9,005,000	X 9,813,000
BARLEY	8,462,000	— 177,000	X 635,000	X 2,427,000	X 4,039,000

before. A year before the price for Wisconsin, Minnesota and Michigan potatoes ranged from 47c to 52c a bushel. New Bermudas the same as two weeks before. Louisiana hampers, quoted two weeks before at \$2, correspond with Florida hampers quoted now at that price.

SWEET POTATOES—Rule steady for choice sound. More or less soft are found among the offerings. They must be sold at shaded prices or else be repacked and made sound. Supply is ample. Damp weather is not favorable.

Marylands, in repacking, shrink heavily. Some show 50 per cent shrinkage on account of soft. Barrels, Illinois, depending on quality.....\$2.00@3.00 Hampers, Maryland, sound or made sound. 85 @ 90 Jersey, kin-dried, sound.....1.10 Illinois, common to good.....50 @ 75

In a small way a few best a shade over. Mississippi and Alabama hampers offered in western markets 90c to \$1.

The price of sweet potatoes is some improved over two weeks before.

BEANS—Quietness prevails. Present light state of demand will be apt to continue for a week or ten days. Dealers view this as probable, so they are not disturbed. No change reported.

Pea Beans—		
Hand-picked, choice\$1.90	@ 1.95
Common1.60	@ 1.75
Mediums nominally about same as pea beans.		
Red Kidneys, choice2.82½ @ 2.85	
Brown Swedish, long1.75	@ 2.00
Round2.00	@ 2.25
Imported2.30	@ 2.35

The price of hand-picked choice pea beans is 25c a bushel lower than two weeks before. Red kidneys are a shade higher than two weeks before. Other kinds unchanged from two weeks before. A year before choice hand-picked pea beans were quoted at \$2.35@2.40.

HAY—Receipts, 1,572 tons. Choice timothy hay in light supply and firm. Inquiry good. Other descriptions in liberal supply and demand fair. Market steady.

Choice timothy hay\$17.50 @ 18.00
No. 1 timothy16.00 @ 17.00
No. 2 timothy13.00 @ 14.00
Iowa and Nebraska prairie14.00 @ 15.00
Illinois and Wisconsin prairie7.50 @ 9.00

Choice timothy hay is \$1 to \$1.50 per ton lower than two weeks before. Iowa and Nebraska prairie hay is 50c a ton higher. Illinois and Wisconsin prairie unchanged from two weeks before. A year before choice timothy hay was priced at \$15 to \$18 a ton.

BROOM CORN—Market steady, but quiet. Per ton—Illinois corn.....\$150 @ 160 Oklahoma.....110 @ 160

There is no change to note in price from two weeks before. A year before Illinois corn was priced at \$120 to \$130 per ton. Oklahoma from \$80 to \$100 per ton.

STRAW—Rye straw quotable at \$6.50@7, oat straw at \$6.50@7, wheat straw \$6.50@7.

Rye straw is \$1 per ton lower, oat straw 50c per ton lower, while wheat straw is 50c a ton higher than two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
Monday	3,347	4,610	2,801
Tuesday	3,306	3,670	4,713
Wednesday	2,888	2,785
Thursday	3,352
Friday	3,735	3,235	3,218
Saturday	4,009	3,989	6,985
Totals	17,285	18,289	21,132

*New Year's Day. *Christmas. Receipts April 1, 1913, to Jan. 3, 1914, 2,957,507 cases. Receipts April 1, 1912, to Jan. 4, 1913, 2,822,574 cases. Receipts April 1, 1911, to Jan. 6, 1912, 2,450,507 cases. Receipts April 1, 1910, to Jan. 7, 1911, 2,786,973 cases.

The feeling is rather easy, with storage a shade lower, and steady for fresh.

General condition remains about the same in this market as lately noted. Trade is moderate; both fresh and storage eggs selling, but buyers are not taking any large quantities, but as a rule merely supplying their daily requirements. Production indicates but little increase, judging from receipts, and quality is irregular. Only a small percentage of receipts are new-laid eggs, and these do not come in lots, but are only found by closely candling the various lots received. To satisfy buyers wanting fresh eggs, receivers find it necessary to rehandle nearly every lot coming to market. The poor lots and stale eggs received are slow at irregular prices, depending on the loss in poor and stale contained in lot.

Ordinary Firsts quotable at 30½@31c. Firsts are quotably 32½c. To bring quoted prices, eggs must run largely to new-laid eggs, with not over 24 eggs loss to the case.

Seconds—In good supply and in fair demand. Quotable, 20@22c per dozen for storage and about 24c for fresh.

Dirities—In good supply and in fair request. Quotable at 23@24c per dozen for storage and 25@28c for fresh.

Refrigerator eggs are quotably firm at yesterday's prices. Demand not so urgent, and the offerings moderate. April Firsts quotably 29@29½c. Extras quotably 30@30½c.

The price is 1c to 1½c a dozen higher than two weeks before.

Fruit

APPLES—Nothing of interest to note concerning this market. It is ruling quiet. In fact, business is rather slack. The weather is mild and damp. It is unseasonable and unfavorable. Former prices are being adhered to. Little fruit is coming in, and holders are taking goods from coolers only moderately, so there is no present pressure.

Some prices are as follows (barrels): Jonathan, \$4.50@5.50; Northern Spys, \$3.75@4.25; Ben Davis, \$3@3.50; Baldwins, \$4@4.25; Grimes Golden, \$3.50@4.50; Greenings, \$4@4.25.

Some prices of box apples from the west follow: Arkansas Black, \$2.25@2.50; Rome Beauty, \$1.75@2.25; Jonathans, \$1.75@2.25; Grimes Golden, \$2@2.50; Delicious, \$2.50@2.75; Spitzenburg, \$2@2.25.

He Was It

"My boy, I learn there is a fat hog for sale here. I'd like to see it."
"Dad, there's a man here that wants to see ye."

They're Far Away

"I thought you were a good boy, sure, but here you are smoking a cigarette. I wonder where all the good boys go to."
"They go to heaven, sir."

THE INDUSTRIOUS HEN IN HISTORY

ALL attempts beyond certain points to trace back and the history of our most common fowls have been unsatisfactory. There is some difference among writers who have delved into the history of our present-day breeds, but they generally agree that they come from the jungle fowl. This bird was found in great quantities in the woods of western Ghauts, in Asia. In the valleys, more than 2,000 feet above the level of the sea, and in the belts of the woods on the sides of the mountains at 4,000 feet elevation. The eggs are exactly like those of our domestic fowl in form and color, but much smaller.

That the fowl was domesticated and extensively bred at a very remote period is evident, for when the Romans first invaded the shores of Britain they found both the fowl and the goose in a state of domestication, and it is probable that some sort of poultry shows were held at that time, for Caesar says "they deem it not lawful to eat the fowl, the hare and the goose. Nevertheless, they breed these animals for the sake of fancy and pleasure."

The breeds of today really owe their origin to the Shanghai or Cochin. This bird was a native of part of the Chinese empire called Shanghai, but the first importation into England came from Cochin-China, and so they were called that, and in after years the China was dropped altogether and they are now known and have been for years as Cochins. The first specimens of the breed were nothing like those of today.

The old breeds were very indifferent layers, producing about the quantity of eggs of the quail, grouse and prairie chicken of today, and the size was but little larger.

In strong contrast with those ancient forebears of the poultry industry come the accounts of the production of our highly developed birds of today. The following account of an international egg-laying contest shows what great progress has been made in this line since the breeding of improved poultry first began in the days before the Christian era.

A White Leghorn pullet in the second international egg-laying contest at Connecticut Agricultural College, "Baroness IV" by name, took the individual egg-laying title away from "Lady Showyou," last year's winner at the Missouri contest, by laying 282 eggs in the year just closed, as against "Lady Showyou's" 281. The title thus goes to England, for she is in the pen of Thomas Barron, Catforth, England, but the bird and her companions in the pen of five remain to be added to this country's breeding stock.

This pen of White Leghorns took first place in total production with a noteworthy record, 1,190 eggs in the year, or an average of 238 per individual. Each bird laid over 200 eggs. With her sister, which took third place for single layers with 262, "Baroness IV" forms the best pair in the pen with 544 eggs.

She laid two eggs the first week and never dropped below four per week but twice after that, laying but three in the seventh and two in the fiftieth. She laid ten eggs in the last fifteen days. Only nine times did she lay seven eggs a week and only twice for two weeks in succession.

The winning pen started in the lead

No. 1. White Leghorn Hen (American) With Record of 267 Eggs. No. 2. Model of Colony House Used With Great Satisfaction as a Colony House at Connecticut Experiment Station. No. 3. Baroness IV, an English White Leghorn, Which Won First Place With a Record of 282 Eggs.

with eleven eggs the first week and was never even threatened for the leadership. From the start to the forty-eighth week every bird in it laid each week except No. 3, which was idle from the eighth to twelfth weeks, inclusive. It was for this strain finished fourth in the first contest, and is winning the Missouri contest this year with a pen of ten birds.

Records by wholesale went in this second contest. A total of 77,916 eggs were laid, an average of 156 per layer for the 500. No such figure has been made outside of Australia, where laying contests started. Some birds died, but every pen finished with five birds. Sixty-seven individuals laid 200 eggs or better.

The best American bird is a White Leghorn in the pen of Burton E. Moore, Winsted, Conn., which took second place in the 500 with 267. Fourth place went to England again, one of Edward Cam's Houghton (England) White Leghorns finishing with 256, but fifth place comes back to the United States with a score of 253 for a White Leghorn in the pen of O. A. Foster, Santa Cruz, Cal.

The second best pair in the affair is the leading American pair, two Rhode Island Reds belonging to the quintette from Colonial Farm, Temple, N. H., which laid 245 and 248 eggs respectively, 493 together. The former laid an egg a day during August.

There is occasion for pride in the leading American pen, which finished third in the 500, the White Leghorns of W. L. Sleeper, York, Pa., which laid 1,029 eggs. Second place went to the Cam Leghorns, with 1,107. Remarkable layers, these Sleeper birds. Four months, April, May, July and August, they took first monthly honors and in July tied with Barron's pen for third. In May they broke all records for a pen of five with 141 eggs, and in the twenty-eighth week tied the Colonial Farm Reds for high weekly score for the affair with 33. This was equaled only by one other pen, the Foster Leghorns, in the thirty-third week.

No. 4 in the Sleeper pen laid 143 out of a possible 153 in these five months and for eight straight weeks in May and June laid one egg per day as regularly as the sun rose. This record was bettered, however, by a Barred Plymouth Rock in the pen of Woodside Farm, West Philadelphia, which laid sixty-one eggs in sixty-one successive days.

After the three leaders other leading pens follow in this order: Fourth, Edward Cam, White Wyandottes, 1,009; fifth, O. A. Foster, White Leghorns, 997; sixth, Colonial Farm, Rhode Island Reds, 968; seventh, Frank Toulmin, Burnley, England, White Leghorns, 954; eighth, W. P.

Canby, East Downingtown, Pa., White Leghorns, 952; ninth, Mrs. H. F. Haynes, Shoup, Idaho, White Wyandottes, 951; tenth, Burton E. Moore, White Leghorns, tied with Beulah Farm, Stoney Creek, Ontario, White Wyandottes, at 945; eleventh, Smith Brothers, Addingham, Pa., White Leghorns, 934; twelfth, F. A. Jones, Northumberland, Pa., White Leghorns, 928.

This makes four English, one Canadian and nine American pens, distributed from New Hampshire to California, in the first thirteen, and three White Wyandottes, one Rhode Island Red and the remainder White Leghorns.

The Beulah Farm pen did interesting work, though not laying as well as its predecessor, which came in second by but two eggs in 1912. Its five layers showed up finely in the last weeks of the affair and pulled up in the standing rapidly. All the White Wyandottes laid well in the final weeks, Cam's laying twenty-six eggs in the last eight days. Mrs. Haynes' was another noteworthy five of that variety. Selected from but sixteen pullets, and when

Barred Plymouth Rock Hen, With a Record of 61 Eggs in 61 Days

necticut College jointly, the newspaper connection which has existed having terminated. The new pens contain ten birds instead of five and three mongrel pens have been accepted for entry in order to compare their laying with that of the thoroughbreds. Also the college has entered ten pens of its own birds for interesting trials of different feeding formulas and methods.

Market Poultry

Those who depend upon dressing poultry for market will be interested in the following suggestions.

The best poultry markets call for chickens with yellow shanks and flesh, full, round breasts and plump, meaty bodies. The market qualities of any flock may be improved from year to year by careful selection of the breeding birds. The average chicken is usually at its best when around six months of age, having reached normal growth. Their market condition is often improved by caging birds two weeks before killing and feeding rations composed of cornmeal moistened with milk. No matter whether they are especially fattened or not, care must be taken as to the quality of their food. Tainted meat, fish or pungent flavored vegetables such as onions or garlic, injure the quality of market poultry.

In Biddy's Defense

By Peter Radford

THE QUEEN of the American barnyard has had more revolts among her subjects during the past few months than perhaps at any time during her rule on the western hemisphere, and lest the historian of the nation's poultry yard do her an injustice in recording the insurrection, I want to make a few observations in her behalf.

If patriotism and justice were the motives that actuated the investigations and resolutions which the hen has been subjected to on account of the high price of eggs, why is it the low price of eggs has never received the attention of these public-spirited citizens? Should not the farm housewife feel as deeply outraged when she is compelled to sell eggs at a low price as the city housewife when she is compelled to pay a high price? Is it not a question of whose ox is gored?

During all this furore the hen has stood upon her constitutional rights, producing wealth approximating more than a half billion dollars per annum. There are many causes which have contributed toward sending the cyclone of high prices raging through the market places, but in my opinion they are largely artificial and I am sure did not originate in the poultry yard.

The pure food law has forced large quantities of ancient stock, usually available in emergencies, to be dumped.

The hand of the speculator casts its shadow over the wreckage and our faulty system of distribution has snapped in its weak places. All these forces of trade have combined to bring about a riot in the market places, but the hen has been doing her duty. Perhaps she may have hesitated to perform the full service allotted her by civilization, as we all sometimes do, but no court can sentence her to lay more eggs, or fix a price for her products.

Our reckless system of distribution must stand the brunt of the blame for loss to the producer, but there are other causes wholly within the control of the producer. By proper housing and balancing the rations of the hen, the egg-producing season can be more evenly distributed throughout the entire year, and the importance of using cold storage plants minimized. The egg crop is one of the very few harvests that can be made to extend throughout the entire year.

It may be that some of the farmers living near the large cities who sold their eggs to the consumer direct profited by the high prices, but in the community where I farm the peddler who bought our eggs never paid us more than 20 cents per dozen and I believe 25 cents was the high water mark in average farm prices throughout the entire United States.

A Successful Egg Farm

By O. M. Stone, Manager

HOME OF O. M. STONE
WEST VIRGINIA

MR. STONE'S POULTRY
HOUSES AND FLOCK

THIS is the modest story of the experience of a crippled poultryman, covering a period of twenty-two years. I am now 58 years of age. For forty years I have worked on my knees and have never moved about without a crutch for forty-six years.

The summer of 1891 found me a bankrupted merchant. In September my mother gave me a pair of hens that, during the late summer, had exercised a hen's prerogatives and stolen away nests, coming forth later triumphant and exceedingly proud with each a follow of little chicks, twenty-three in all. I cared for them and the following spring hatched 160 chickens, raising the most of them and keeping all the pullets and yearlings, my flock then numbering (after selling the surplus) seventy-two fowls in all.

The following year, from my seventy-two hens (for I had what others called "good luck," and wintered every one safely) we sold 900 dozen eggs for \$117.50, and fowls to the amount of \$20. That year the price of eggs was about 13 cents per dozen. We then moved on a piece of very poor land of my wife's. Perhaps I should not mention it, but to show how deep in defeat we were, and how even one so unfortunate as to be a hopeless cripple can climb up from the depths, I will say that our struggle was a most bitter one. Many a time did we, day after day, sit down to meals consisting only of roasted potatoes, corn bread and water. How we managed to keep the wolf on the outside of the door I hardly know, yet we did. Our motto was "Stick to it," and stick we did with the tenacity of a bulldog. For seventeen long, almost endless years we kept the faith, and kept up the fight, without going in debt or signing a note. Kind friends who watched our struggle offered to indorse paper for us, to set our feet on higher ground, but we refused their offers, giving them our boundless gratitude for their confidence and sympathy.

At the end of the nineteenth year we built a fine new house for ourselves, finished throughout in solid oak, costing us about \$2,000. We are very proud of it. We have a handsome oak stairway, a concrete cellar, and our front door, and a mantle in one of the rooms cost me \$64. You see, we saved so severely for so long that we feel that we are now entitled to some of the "trimmings" that we've wanted, but done without for years.

In August, 1912, I built my last hen house, 120 feet in length by 14 feet

wide. This house accomodates nicely 450 pullets. I have two other houses, each 100 feet by 12 feet, housing 275 hens each.

The year 1913 was our banner year. The 450 pullets turned out a little over \$1,072 worth of eggs. The 550 hens (yearlings and two-year-olds), produced eggs which brought me \$944, a total of \$2,016.19 during the year. My monthly sales were as follows:

December, 1912..	513 doz. for	\$168.00
January, 1913..	713 doz. for	200.00
February, 1913..	730 doz. for	172.00
March, 1913.....	1,201 doz. for	258.75
April, 1913.....	1,165 doz. for	221.00
May, 1913.....	1,101 doz. for	186.00
June, 1913.....	957 doz. for	181.82
July, 1913.....	689 doz. for	166.62
August, 1913.....	521 doz. for	145.00
September, 1913..	412 doz. for	156.00
October, 1913....	253 doz. for	106.00
November, 1913..	109 doz. for	55.00

Total8,274 \$2,016.19
Chickens sold..... 190.00

Total income\$2,206.19

During the year 1913 I sold eggs for an average price of 24 1-3 cents a dozen.

In December I began shipping through the Equity System. The New York representatives have treated me as well as any one could ask, and better than I expected. I received top prices on all my own production. When hennery extras were selling at fifty-two cents I received that for mine, and fifty cents for some I shipped with mine. I grade my goods with utmost care, and ship none but strictly new-laid extra henneries, assorted as to color. My shipments from December 9 to January 5, inclusive, amounted to 570 dozen, shipping usually two cases at a time.

I may add that a brother of mine, operating the old home place, now valued at \$12,000, has not during the past few years sold products of as high value, gross or net, as I have from my poultry farm.

This is my story as it is, without frills. I trust it may carry encouragement to some one. And to you, Mr. Editor, I can heartily and truthfully say your excellent paper has done me more good in prices and profits than all the other five or more that we take. Care and co-operation worketh wonders.

(Editor's Note.—Our New York representatives advise us that Mr. Stone's eggs are strictly prime, put up in the most acceptable way, and that they had no difficulty in disposing of his supply at the top of the market. The Equity System will lend a true helping hand to every farmer who will conscientiously try to help himself.)

SOME FARMING HISTORY

By Henry G. Bell, Agronomist

A FARM that has a history is always interesting, particularly if that history shows that it has been managed carefully and ably for a number of years. A gradual development of the farm from a rough, uncultivated land to a remarkably productive soil is history that means something, that shows accomplishment.

The 264-acre farm of J. D. Yates, located about six miles west of Altamont, in Fayette County, Illinois, is a farm with a history. In 1852 Mr. Yates's father took possession of this farm. The country then was all new. Mr. Yates broke the first ground in that vicinity and was the first settler there.

When Mr. Yates inherited this farm, some thirty-five years ago, no one would have recognized the well-laid-out, beautiful farm as the rough country Mr. Yates's father had entered many years before. Now, at the end of thirty-five years, it would be equally hard to recognize the former farm and the present one, for Mr. Yates has applied modern methods and has made it the most successful farm of that vicinity.

The rotation that is practiced is timothy sod plowed under for corn two years, fallow one year, plow fallow up for wheat in the fall. The wheat is sowed about the last of September.

Mr. Yates is quick to adopt anything new that will make his farm more productive and more profitable. It is with this idea in mind that he first used fertilizers. He first experimented with one acre of wheat, using 250 pounds of fertilizer. The fertilizer was sowed with a wheat drill. Wheat was sowed at the rate of one and one-fourth bushels per acre. Timothy was sowed at the same time. The results of this experiment showed that the fertilized wheat was uniform in height and much riper at harvest time, and the heads were of a uniform length. The unfertilized wheat yielded about ten bushels per acre. Upon the fertilized field he got twenty bushels per acre.

Part of the history of this farm is seen in the cattle maintained thereon. The high-grade draft horses which Mr. Yates raises are a matter of great pride to him. They are all sired by the Clydesdale stallion, "Byron Prince," which is a very fine animal, weighing 1,700 pounds. This horse has won a great many premiums at stock shows and fairs and Mr. Yates is naturally very proud of it.

The history of the Yates farm will undoubtedly continue, as it has developed since 1852. Its crops and yields are increasing and it is improving upon a sounder and better basis every year under the wise direction of Mr. Yates.

A Year's Work and Profit With a Few Hens in Town

Mrs. J. H. Smith, Mineral Wells, Tex.

FOR SEVERAL YEARS I have been what my husband calls "A Chicken Crank," and in order to prove to him that for the amount of money invested, a few hens will yield a bigger rate of income than almost anything else in the live-stock line, I decided to keep books with the hens one year.

At the first of the year I had twenty-seven hens, six were Buff Plymouth Rocks, about the same number were Silver Wyandottes, and the remainder were just mixed stock with the Silver Wyandotte blood predominating.

Desiring to get a large flock of the Buff Rocks they were kept in a large pen for about ten weeks; they were given good care, fed and watered regularly; they were good layers of large brown eggs, but I did not succeed in raising a chick to frying size. The eggs that were incubated hatched fairly well, and the chicks, when first hatched, seemed thrifty and lively enough, but after a few days would begin to look weak and sick, refuse to eat, droop about and die. Other chicks were always ready to eat heartily and grew off rapidly. Nothing I did, and I tried several remedies, ever did the little Buff Rocks any good, and I decided the fault must in some way be with the stock. Few of their eggs were good oval shape, some were almost round, others rather long with both ends same size, and the hens continued laying the same shaped eggs after being released from the pen and treated same as the other hens. So the only income from the Buff Rocks was the eggs used for the table.

We are living just on the edge of town where poultry was permitted free range. My chickens had a very good range of a vacant lot to the east, another larger lot on the west, a very large lot north and back of the house, and also a mountainside to the north-east.

I ordered a 120-egg incubator, and by simply following instructions given with the machine made good hatches, and with all the chicks, except Buff Rocks, raised one chick for every two eggs incubated. Have very seldom any year fallen below this per cent of chickens raised from incubator hatches, and have some times done better.

The incubator was operated three times. The first hatch was brought off the latter part of January. A lady friend furnished eggs and oil and gave me as pay for my work one-half the chicks, which was between forty and forty-five pretty little Buff Orpingtons, and thirty or thirty-five of these were raised and sold as fryers. The second hatch was from eggs furnished by my own hens, came off a little after the middle of February, and was another good, even better, hatch. The third time I furnished only half of the eggs, another lady furnishing one-half the eggs and the oil. I received one-half the chicks.

The chickens were given to hens about twenty-five to each hen and put in good large coops. The chickens were given the infertile eggs hard boiled with corn bread and some milk for first feed. After they were three or four weeks old I began giving them corn chop with table scraps and some milk divided between them and the hens. They did not get the milk regularly, however, as I kept but one good cow and there was so often some one wishing to buy what milk I could spare.

I did not keep account of cost of feed, but the hens were fed one-half gallon corn chop a day. The penned hens were fed chop and table scraps. After being released from the pen they shared the one-half gallon chop, table scraps and milk with the other

hens. As fast as they were large enough the fries were disposed of and as hot weather came on, moulting hens and young stock were made to rustle for most of their feed. Regular feeding was not begun again till about the middle of September, when I left home for a two weeks' visit. No account was kept of eggs collected while I was gone and I did not begin again keeping an account of eggs collected and used until about November, when the hens began laying pretty well again.

I did not sell any eggs, as I used all not incubated for the table, as we all liked fresh eggs in any or all of the ways they can be used on the table. But I kept account of those used, marking the change in price at the date the change occurred to estimate as correctly as possible the worth of the eggs consumed. This was really too low, for it was always the price I could have easily sold them for, not what, most likely, we would have had to pay had we been buying, and considering too the usual loss from bad eggs, the worth or cost of those we used would have been much more.

Eggs used on the table amount-	ed to	\$15.00
Fries used on the table amount-	ed to	7.00
Fries and a few common hens	sold for	15.00
Buff Rocks were traded for	some work done	5.00

Total\$42.00

The early fries brought thirty cents each, the later ones twenty-five cents each. Those eaten at home were rated at twenty cents each, as I did not like to charge my own family quite as much as I would charge others. Hens sold at twenty-five cents and thirty cents each. All were sold to customers who came after them.

The work of caring for the hens and chicks and operating the incubator did not interfere with my regular housework for our family of five, which consisted of two grownups and three small children, and did not prevent my making half a day, or even a whole day visits occasionally.

The young chicks were kept free from lice; plenty of good clean drinking water was kept out for them all the time, and their crops cloen. Crude carboic acid in water was used every week or two to disinfect their coops, and a little sulphur given sometimes

in a wet mash feed when the weather was dry kept them always growing and healthy.

At the end of the year I had sixteen two-year-old hens and eighteen of the nicest and best pullets I had raised, to begin with another year.

HOW I SELL FRESH EGGS

By Mrs. Raymond Dawson

To the Poultry Editor: I shall make a report on my methods of poultry marketing, according to the request of the American Poultry Association, printed in your issue of December 1.

1. I have no difficulty in finding a market for my eggs and poultry.
 2. So far I have had no losses of any importance, and have been free from serious disappointment.
 3. I keep none but the pure bred, single comb white Leghorns, and their eggs are uniform in color and size.
 4. While accumulating eggs for shipment I keep them in the cellar, away from all kinds of vegetables, for I am positive eggs will absorb odor and taste. I store in the case, small end down.
 5. I market eggs once each week. Marketing should be done more frequently, but I am located ten miles from my market.
 6. I sell all my eggs direct to consumers. Do not sell to grocers. Having "quality," I easily obtain the same prices retailers ask their customers.
 7. I sort all eggs. Those undersized I keep at home. Patrons get full sizes from me always. I keep the nests perfectly clean and have plenty of them, so I have no dirty eggs. If I had them, would never think of sending them to market.
 8. My customers take my eggs as they come, for they have my guarantee to replace any not right. I never have to replace any, however, as I am careful to send out a product that is perfect.
 9. I do my own candling and grading.
 10. I separate the male birds from the flock immediately after the breeding season.
- Miami, Okla.
- (Editor's Note—Mrs. Dawson is to be both complimented and congratulated on her thorough and efficient management of poultry and eggs. She has won a well-deserved success, and yet has done nothing which many other farm women can not do. If the great majority of farm folks would follow such methods there would be less call for reformed methods of marketing poultry and eggs.)

WINTER GRAZING FOR HOGS

To produce pork with greatest profit, hogs should have continuous grazing in winter as well as summer. (Root crops, alfalfa or clover hay can be used as a substitute in northern climes, where grazing is out of the question much of the winter.) The cost of wintering hogs is expensive on nearly every farm. Feeding corn alone, without grazing or suitable substitute, is the most expensive way of producing pork, and, wherever practical, grazing is far cheaper and better than any substitute.

For grazing purposes crimson clover with either rape, rye, oats, wheat or barley is the most reliable. It is not now too late to plant these crops in most sections of the south, below the Mason and Dixon line. Good winter pasturage can not be had except on rich, well prepared and especial well drained land. The seeding should be very heavy, as plants grow very slowly in winter and do not "spread," so a heavy seeding is essential to good pasturage. On farms where pork production is a regular feature of the farm operations a lot should be set apart specially for winter grazing purposes.

FREE

No matter what tobacco you are now chewing, if you will try PIPER Heidsieck you will become a permanent user of this famous tobacco. To induce you to make a trial, we will send you free, this genuine leather

Tobacco Pouch

Strongly made of fine tan leather with a flap and patent snap clasp. Every man who loves a good chew will prize this handsome, handy leather pouch to carry his tobacco in.

Pouch is 3 1/4 x 3 in. size.

Just holds a 10c cut of PIPER Heidsieck.

PIPER Heidsieck

CHEWING TOBACCO (CHAMPAGNE FLAVOR)
Sold Everywhere in 5c and 10c cuts

PIPER Heidsieck is the *highest type* of chewing tobacco in the world. Every leaf of ripe, golden brown tobacco used in "PIPER" is carefully selected from Nature's choicest crops, clean, sweet and mellow. The flavor of "PIPER" is different from all other tobaccos made—a rich, wine-like, delightful taste which never fails to make a friend.

We Want You to Try PIPER Heidsieck

Send 10 cents and we will send a full-size 10c cut of "PIPER" and this handsome leather pouch FREE.

The tobacco, the pouch and mailing expenses will cost us 20 cents—and we are glad to spend the money to get you to try "PIPER" just once.

We know that once you have started, you will become a permanent friend of this wonderfully wholesome, healthful and satisfying tobacco.

In writing us please tell us the name of the dealer of whom you buy your tobacco.

Poultry Markets and Marketing

By Robin Gates

WILL GIVE a brief summary of some of the large markets, and then take up the ways and means of getting the poultry to the markets. Boston is probably the best poultry market in the United States for the best grades of dressed fowls. It is the brown egg market, a better price being paid at this place for brown eggs than for white eggs. Old Fanuel Hall of Revolutionary fame is the city poultry market. Fancy capons and large roasting fowls are in great demand and bring fancy prices.

New York city is the great duck market. The hotels, the Atlantic steamers and the large Jewish population takes most of them. They go on the steamers frozen so they will keep. This market wants large ducks. The price is from fifteen cents a pound up. But a great many restaurants and small families buy a small duck, so that there is quite a demand for Indian Runners. New York uses about 4,800, cars of live poultry a year and vast amounts of dressed poultry. Broilers run from twenty-two cents to fifty cents a pound. This is a good place to send 1 1/2-pound size. Capons run from seventeen to twenty-six cents a pound. New York uses about five million cases of eggs a year. There is a preference for large, white eggs. Sometimes consumers pay as high as seventy-five cents a dozen for fancy eggs, and sometimes seconds are sold for twelve cents. This is a strict market. Only clean, fresh eggs sell well in New York.

Philadelphia is a good market. Private families want small birds and hotels want large ones. Many Hebrews are here, too, and Hebrew holidays consume the poultry. On Jewish New Years, October 2; Atonement, October 11; Tabernacle, October 16; Purim, March 12; Passover, April 11 to 17; large amounts of all kinds of poultry will be used at these dates. Small capons not wanted; they ought to weigh seven pounds, at least.

Kansas City is a railroad center and large amounts of eggs collect here for cold storage and shipment in car lots. Chickens less than two pounds in weight not wanted. The packers (Swift & Co. and Armour & Co.) have large poultry stations here. (They also have branches all over the west and south.) Both companies have stations for finishing market birds by milk feeding. They use sour milk and meal with some shorts or low grade flour and a little meat scrap.

Another market worth mentioning is St. Louis. Other cities in the south are not nearly so good as markets as the northern cities, partly because the quality of poultry received is poorer, and partly because the demand for high-priced stuff is less.

One important thing in selling poultry is to have a crate of even size and age, and don't mix hens and roosters. Have them fat and finished. Farmers lose by not fattening fowls for market. These days of high-priced meat means high prices for poultry, and the best price goes to the one who has the best fowls.

Ducks and geese may be scalded; everything else should be dry picked, undrawn, with the head on. As a general thing I think farmers do well to sell live poultry. The extra early birds are the most profitable. Study your market and aim to have what the market wants at the time it is in the greatest demand. The extra price will more than pay for the extra expense.

Eggs simply must be clean and fresh. Look up a suburban trade and use the parcel post if possible. Some hotels are good customers but are sometimes slow pay.

Farmers should ship their own poultry and eggs whenever possible. It's easy to ship. Get quotations from

dealers in your nearest city, crate the chickens and ship them. Send a letter informing the dealer what and how many you have shipped. He will pay the transportation charge and remit the balance. I will give an illustration of how much this pays. A short time ago our local dealer was paying eight cents a pound and shipping to one of Swift & Company's branches, making a profit of one and a half cents a pound. I sent a crate to Oklahoma City, 150 miles away, and got fourteen cents net. I made six cents a pound more than I could have got from the dealer. I got a much better price than the local dealer got for his shipment because I was in touch with the market. It is not often that there is six cents a pound difference, but there is always the local dealer's profit to put in your own pocket. I shipped again recently. I had enough to fill one crate and half of another. By co-operating with a neighbor he delivered enough hens to me to fill the crate.

If one has not enough to make a shipment, let two or three neighbors ship together. The commission men are glad to deal direct with the farmer. I think it is best to ship eggs direct to a city grocery when possible, but the dealers can pay more than the home merchant. Get cartons holding one dozen eggs each, and have the name stamped on them. They may be placed in a thirty-dozen egg case and are much better than the cheap fillers used by stores. Paint the case and have the name on it. Now you are ready to supply private customers or groceries that want a good grade of eggs. Don't put white and brown eggs in same carton. Don't sell small or dirty eggs; use them at home. And last, always make the quality A No. 1, and guarantee every egg by stamping the name on the egg. Farmers who do this can build up a reputation that grows, and a trade that will be a pleasure.

SIX GEESE AND \$15 PROFIT

I moved from town on a farm the 4th day of last March, the same day the Democratic rooster moved into the White House yard and flew to the dome of the Capitol. If that rooster is as profitable to Uncle Sam in proportion to the profit I have made from six geese, we shall surely have prosperity in all the land throughout the reign of Mr. Wilson.

I did not buy these geese with much expectation of early profits. I paid \$2.50 for the six. By the last of April I had hatched thirty-four goslings. Thirty-one of them I succeeded in raising. They are now worth 50 cents each on the market and I have picked four and one-half pounds of feathers, worth \$2. These geese helped me materially in my cotton. Grass is the bane of a cotton patch and it is hard work to hoe. The geese had the run of the patch and kept the grass grazed closely. They made a good hand, as ten geese are equal to one man with a hoe. I would not be without geese in raising cotton by hand.

All I spent for feed was \$2.10 for one sack of corn.—W. R. Sheppard, Arkansas.

TURKEYS IN NORTH CAROLINA MOUNTAINS

I live in western North Carolina, fourteen miles west of Asheville. I consider turkeys the most profitable crop we raise on our 100-acre farm. This year I raised fifty. Have sold thirty for \$62.14 and expect to sell the other twenty for Christmas at same price. Whole amount, \$102.14. The cost of feeding has not been more than \$20, as they had free range. I find in raising turkeys it requires experience, care and painstaking to make a success.—Mrs. Josephine Hayes, North Carolina.

"If I were buying a dozen incubators they would all be Queens."

C. E. GRAGG, BUTLER, Mo.

Queen Incubator

is built on service. You can depend on good hatches every time you fill it with fertile eggs. I build honestly, so your machine will last many years. See my 1914 Model with its 28 Special Features. Paying a higher price for other incubators will not get you a better hatch. Send for finely illustrated 1914 catalog.

RAYO Cuts Down Expenses—Does Away With Labor—and Makes \$179.40

"I am sending my order for another Rayo. The returns from my Rayo last year checked up over 500 chicks that lived to produce. Sold 45 cockerels from the lot from \$2 to \$3.50 each; most of the rest I marketed as broilers at \$1 and 2 lbs., at an average of 30c per lb. Figuring it up, I find the Rayo made \$179.40 net for me. The machine took very little of my time, and I can recommend it to everybody who wants to make money in the business."—Roy Best, Waverly, Ohio.

What the RAYO Has Done for Others—It Will Do for You

Get one and beat your neighbors' hatches and make more money. The Rayo boosts profits, slashes expense, cuts out the drudgery, over-old-style, lamp-on-the-side machines. Requires only 1 filling to hatch. Runs on 1 gal. of oil; others use 5 gals. Runs with little attention; others need constant looking after. The Rayo does all its work automatically. Hundreds of experienced poultrymen will have no other machine. Beginners sure of success. Low, direct, freight prepaid prices to all.

All Three FREE
Money-Making Book and sample of first and only Patent Hatching Chart free to everybody on request. Complete chart and \$1.50 Hyo-meter free to all new Rayo purchasers. Ask for Book No. 14. It tells how to Turn Eggs Into Chickens Into Dollars.
Rayo Incubator Co., 1039 S. 13th St., Omaha, Neb.

It takes a production of four dozen eggs a year to pay for the food the average hen eats.

Milk-fed chickens are kept on a milk diet for fourteen days before being sent to market.

Bone and eggshells are composed of phosphate of lime. Don't neglect the crushed oyster shells.

The poorest layer in the flock should produce at least ten dozen eggs a year. Cull out the low yielders.

Every poultryman would like to get \$10 for a single bird, but mighty few of them are willing to pay that much.

Always have your fowls in the pink of condition when you send them to market, but see that their legs are yellow.

The average farm flock produces an average of seventy-five eggs per hen per year. Every hen should lay twice that many.

No one will ever monopolize the poultry business so long as the price of a setting of eggs remains in the reach of the average man.

Keep a strict account with your flock. We've said this before, but the fact that many of you have failed to start your book shows the necessity for saying it again.

When making up a mash for the hens, make a mess of it if you want best results. Bran, ground oats, alfalfa meal, meat meal and corn meal make an excellent combination.

Fertile eggs, with strong vitality, are essential. Strongly fertile eggs are out of the question without the hens laying the eggs are fed the right combination of grain, green food and animal food.

NEXT WINTER'S EGG SUPPLY

A successful eastern poultryman writes in an exchange on raising pullets for winter eggs, giving it as his opinion, based upon his own experience, that pullets hatched in February are hatched too early for profitable winter layers.

He says:

"My experience has been that February pullets will lay well during July, August and September, and then too great a number will go into a molt to make them any more profitable for winter layers than are yearling hens. My April pullets develop into good hens by September without forcing and make my best winter layers. A pullet that is stunted and not healthy and full of vitality seldom if ever makes a profitable hen. The poultryman does not make all his profit on the winter eggs, and the price paid for the summer eggs is of the most vital importance to him. All egg producers should work untiringly to keep egg prices from going too low in the summer time, when the best of eggs are most easily produced. Cold storage well managed should solve this problem. The demand for 65-cent eggs (whole-sale) even in the winter is exceedingly rare. The eggs must be chalk white (in our market) and weigh not less than 26 ounces to the dozen. All others are classed as pullet eggs and are quoted at 10 to 20 cents less per dozen. Sixty-five cents per dozen looks good to a poultryman, and, living within thirty miles of New York city, I think I have received my share of the 'reward.' One pen of about 500 pullets realized something over \$2,000 for me this last year."

CHICKEN CHAT By Dominic

If grain is high priced, so are eggs. How many of our readers have been getting eggs in spite of the winter? Some of us have, and all of us should.

Fowls must be well fed if they are to bring forth eggs during the cold days, but an over-fat fowl is a non-producing consumer.

Don't feed long clover stems to poultry. Cut it fine. Long clover or alfalfa produces "crop-bound" fowls.

A draughty house can do more damage than all the poultry remedies can cure. The house need not be kept warm, but it must be kept free from draughts, and dry.

Green feed, meat meal, and ground cut bone are essential to a steady yield of winter eggs. Birds were by Nature made to lay eggs in summer, when they could eat grass and grass-hoppers. You can change Nature's laws, and Nature says green food and animal food are necessary for large egg production.

Resolve right now not to let another summer pass away without putting up some fine, bright clover or alfalfa hay to feed your biddies next year at just this time.

M. M. Johnson

H. H. Johnson

65c and a Rubber Stamp Started the Largest Chicken Hatcher Business in the World

IT'S a business that has sold half a million incubators—a business that has made half a million people successful with chickens and other poultry.

Johnson's capital, when he landed at Clay Center, was 65 cents. Now the Johnson factory is the largest incubator factory in the world, having already sold half a million Old Trusty machines, and is ready to supply 100,000 more to new customers in 1914.

How did the Johnsons do it? It isn't salesmanship because, as a matter of fact, these incubators are not sold—they are bought. Every one has been sent out on trial and every one is still guaranteed. The answer is that Johnson designed and built an incubator that makes profits for his customers. That's all there is to it.

Johnson was an engineer in his early life. Maybe that had something to do with it. But he tells his own story of his ups and downs in the Old Trusty catalog, so you can get it direct from the book. You will get a lot of ideas from this book. You will realize that no matter where you live, if you have a little ground for poultry to run on, you can make a big extra income and it needn't interfere with anything else you now do.

Johnson's customers keep all the mystery and the trimmings and experiments out of their poultry business. They stick close to the simple ways and make much and spend little on their outfits.

Old Trusty INCUBATOR Still Less than \$10 Freight Prepaid

Everywhere East of Rockies—A Trifle More Delivered Free to Far Western Points.

And that's for the finest incubator that can be built—a hatcher that's pleased three or four times as many people as any other hatcher—a hatcher that half a million people are making millions of dollars of profits from—a hatcher that would cost you anywhere from \$5.00 to \$8.00 more according to size, if made in the ordinary small factory or by a big dividend paying corporation, or if sold in the ordinary way.

Write for this rock-bottom factory price, based on selling 100,000 incubators. In such a business you can see how the Johnsons can take a small profit. You get the benefit. Think of getting a full fledged start on the road to big poultry profits with such a trifling sum.

90 Days' Trial 20 Year Guarantee

That tells the story of Old Trusty quality. It backs up every promise the Johnsons make for it or you trade back. It keeps on doing the work right year after year or it's up to the Johnsons to make it right.

Key to Poultry Profits FREE

The Old Trusty Book is the real A-B-C of making poultry profits. It has helped hundreds of thousands of others to make a double living, showing them how poultry can be added to their other work. Little extra expense and a great income. Half a million are the reward of having read this book. The Johnsons want you to have a copy of the 1914 edition—120 pages of the most helpful poultry talk published. Write for this and get the Johnson prices. You will find the book helpful whether you want an Old Trusty now or not. Write at once. Address H. H. Johnson, The M. M. Johnson Company Clay Center, Neb.

Still Less Than \$10 \$5.00 less than any other factory would have to ask.

International Harvester Oil and Gas Engines

Here is an engine that you can use on your farm.

International Harvester engines are the best your money can buy. Once bought, they begin to save money for their owners because of the good materials they are built of, their expert design and construction and their exceedingly long life.

International Harvester engines are simple, powerful, easy to run, and seldom need repairs. Their popularity is based on many strong points like the following: Accurately ground piston and rings, offset cylinder head, split-hub fly wheel, detachable valve guides, etc. The line includes all types and styles, using both low and high grade fuels and ranging in size from one to sixty horse power.

Write us for interesting catalogues. When we send them we will tell you where you can see International Harvester engines.

INTERNATIONAL HARVESTER

Our Country Contributors

Semi-Monthly Prize Letter Competition:

First Prize \$3.00 Second Prize \$2.00 Third Prize \$1.00

This department is designed to induce subscribers to contribute accounts of their farming experiences, their most profitable crops, or their ideas on any subject of general interest to farmers. Every farmer is invited to contribute an account of his most profitable crop, telling what made it so, in figures and facts. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell your story in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, UP-TO-DATE FARMING, Indianapolis.

SECURING THE BEST INCUBATOR RESULTS

(First Prize)

It is best never to start the incubator until one has brooder facilities for taking care of the chicks. The incubator will hatch the chicks but it can not raise them. Too many people trust to raising chickens in make-shift ways after they come off. Two brooders should be bought with every incubator if early chicks are desired. If brooders or setting hens are ready to take the chicks at hatching time the incubator may be started with profit on the average farm any time after February 10 where early pullets and fryers to catch the best prices are desired. If there are no facilities for brooding the chicks after hatching, more than one hatch should not be made until such facilities are procured. The best place in which to operate the incubator is an incubator cellar which, if properly constructed, is partially under ground with non-conducting walls, an air space between the roof and ceiling, darkened windows, and a ventilating system for

keeping the air pure. This, however, is usually beyond the means of the person with one or two incubators whose nearest approach to this is an airy house cellar. The air must be pure to secure the best results, and the temperature kept as even as possible. The directions which accompany the incubator must be closely followed, as the maker knows his machine like a book and can tell better than any one else just how it must be operated. One person only should have the entire care of the machine. I have successfully operated an incubator for seven years and have found that one must never "fuss" with the machine. After setting it up and making sure that it stands perfectly level, light the lamp and without any eggs ascertain positively that it is working properly. Using the best oil obtainable is quite essential. If the temperature drops many degrees when a lot of fresh eggs are put in the regulator should not be changed as it will become normal in a few hours. After two days the eggs must be turned twice daily, cooling them for a few minutes during the lat-

ter part of the hatch. If light shelled the eggs must be tested for fertility after being five days in the machine; if dark shelled, after eight days. The best time to do this is when they are turned and aired. Infertile eggs are perfectly clear, but in others the chicks can be seen developing. Egg testers are furnished with some machines, but a small one suitable for all purposes may be purchased. In no case is it well to place duck and hen eggs together, better results being obtained by placing eggs of only one breed in the incubator. At the end of the nineteenth day the eggs are turned for the last time and the machine closed until the hatch is completed. If the proper temperature has been maintained the eggs will begin to pip at the end of the twentieth day and the chicks should all be out within twenty-four hours. Ducks will be a little slower in coming out on account of the toughness of the shell. I have said nothing about the proper temperature because so much depends upon the position of the thermometer. About 103 degrees is usually right and although some machines require the use of moisture during the hatch, directions to this effect will accompany the incubator. In conclusion let me say that if there are any readers of UP-TO-DATE FARMING who have not yet purchased their machines, no time should be lost in writing to all the incubator firms advertising in this paper asking for their catalogs, as by having a number of different machines to select from, one can more easily and certainly obtain the incubator and brooders he likes best.—Mrs. Mary E. Underwood, Illinois.

MY EXPERIENCE RAISING POULTRY

(Second Prize)

I think each one has a talent and I think mine is for a farmer's wife.

If You Have Stumps GET THIS GREAT

HERCULES All Steel, Triple Power Stump Puller

30 Days' Free Trial—3 Year Guarantee

STUMP land is failure land —loafer land! You pay taxes on it—and get no return. You lose the money you could make if the stumps were out. You've been losing that money for years. Land is too high-priced now to waste it. You can pull up every stump in a hurry. You can make \$1281.00 profit the very first year after the stumps are out—and \$750.00 every year after, on every 40 acres. The estimate is low. Let me prove it.

Don't Have Loafer Land

It's easy to pull out the stumps—with the Hercules. Even if you have a few stumps

in your field pull them in one around equals them with shall Wh successful County, I the time plowing, a crop of the field more than takes to p

5 M A

The H easy to o stump, n how deep come, in the roots a pull an ac

Thous men have over and year with extra cro of the la doing cor their neig

You can not make an opera singer out of a person that had rather hear hens sing than to sing themselves. I like farming and am glad I'm a farmer's wife.

Three years ago I became owner of four Plymouth Rock hens and a Plymouth Rock rooster, and in a short time I was getting two or three eggs a day. In August I set one hen on (the unlucky) thirteen eggs, and she hatched out eight chicks, which I raised. Five of them were roosters and the three pullets turned out black. How I got black pullets I do not know, for they were hatched from Plymouth Rock eggs.

However, I wanted to see what I would get the next year, so I kept them and got a Brown Leghorn rooster. My black hens certainly were good layers. They began laying early in the spring and laid every day until they wanted to set. Each hen was set, and hatched out three batches of chicks each, the last being hatched in September. That fall I kept twelve of the largest and best and sold the rest, and last spring I again got a Leghorn rooster, as I wanted hens that would lay. From the twelve hens I hatched out over 100 chicks, but the hawks were thick, so I haven't more than half of them left. But I will have about thirty nice pullets for next year's breeding.

You may be curious to know the color of my new kind of chickens. The breast is black, back and neck a golden brown and black mixed, wings brown on the upper part, tips white and between the brown and white is a black stripe. The pullets have small double combs.

I am going to save only the best every year. These birds are larger than the Leghorns, but are just as good for laying. Below I will give a

few hints for keeping poultry free from lice:

Tie two or three moth balls in a cloth sack and hang on roosts and the lice will leave. Also place them in the nests. Be sure to put them in a sack so the hens will not get at them.

When setting a hen place moth balls in the bottom of the nest and you will have no trouble with hens leaving the nests.—Mrs. E. L. Pratte, Michigan.

MAMMOTH BRONZE TURKEYS

I consider Mammoth Bronze turkeys my best paying crop, the way I raise them. I see to it that I have large, heavy-boned birds for breeding. I mate eight or nine females to one male. When the hens begin to lay I gather the eggs every day and store them in a cool place, turning them two or three times a week. Then, when the hens are ready to set, I give each twenty eggs, allowing her to set where she has been laying, if her nest is where she is not disturbed. I frequently set a turkey in a large dry goods box and shut her in and give her food and water, and after a few days or a week I open the box and let her off, but see to it that she goes on her nest again in about half an hour. If she does not I drive her on, and after a few times she goes on her nest without attention. When the little ones are two days old I give them a little dry bread crumbs, and water in a shallow pan, so they can not get their bodies wet. I let them roam about with the old hen, but bring them home early to roost. When they are ten days or two weeks old I give them rolled oats and water every evening when they come home. (They generally come home regularly by that time.) I feed thus until they are two months old. In the fall, when bugs and grasshoppers become scarce, I be-

gin to feed them a little whole oats every evening before going to roost. When about six months old I begin selling the best of the flock as breeders, the hens selling at \$3 each and the toms at \$4.50 to \$5 each. The balance I sell on the market at 12 cents to 14 cents per pound, live weight. Turkeys are very profitable on the farm, as they destroy so many grasshoppers, bugs, worms and weeds which injure the crops, and in the fall they live largely on grass heads and weed seeds. And, besides, I get great pleasure in caring for them, so I consider Mammoth Bronze turkey raising a profitable business.—Mrs. E. Yust, South Dakota.

PROFIT IN CHICKS

In the fall of 1912 our chicken crop was a little short, so we decided to buy a few more pullets. I watched the local store and every time I happened to be there when the merchant had a few nice pullets I would buy them.

I purchased eighteen, costing me \$3.60. They commenced laying soon after I bought them, and though we kept no records I am sure they more than paid their way in eggs. In April, 1913, we sold part of them. They then averaged 69½ cents each. I consider they made us a clear profit of \$8.91. We bought them for 10 cents and 11 cents and in April sold for 14 cents per pound. I don't think a person could have invested in anything that would have brought better returns.—A. C. H., Tennessee.

Some Good in All

Dips—No use to hire that fellow. He hasn't sense enough to go in when it rains. Flips—But he's all right in a dry season, isn't he?

The Wonderful Hercules

The Hercules is the only genuine All Steel Stump Puller made. It is 60% lighter and 400% stronger than any iron puller made or any "semi-steel" puller. The Hercules has ample strength to pull out any stump or green tree or hedge. Its triple-power principle gives it a powerful pull—yet easier on the team than any other puller ever made. Either self-anchored or stump-anchored. Built low to the ground. It can be furnished with 200 feet of cable—enough to pull 3 acres of stumps without moving the machine.

It is sold on 30 days' free trial, backed by a 3 year guarantee that insures the free replacement of any castings that may break from any cause, flaw or no flaw, at any time within 3 years from date of purchase.

Woman's Work and Welfare

Helpful Hints for Homefolks

FIRESIDE SOCIAL CHATS

By Aunt Sophia

FOR ONCE I am going to be a "silent partner" in our department; or, at least, as silent as a woman can be. I am delighted to give way to several other members of our Fireside Social Circle. First, there is Sister Barthold, who is in trouble and wants some good, helpful advice. My own idea would be for her to take the baby to a competent, experienced physician and then follow his directions without fail. No doubt, however, many of our mothers can tell us all some splendid things along this line.

But there, I wasn't to talk, and I will not, only to say let us hear from more of you.

AUNT SOPHIA.

MRS. BUSYHAND'S DIARY

By a Farm Woman
(Concluded)
SABBATH

We all go to church and Sabbath school. And reading between the lines, many busy mothers know what "flying around" this means, when getting four or five children ready for church. But if their clothes are arranged and placed in each one's room, and preparation made on Saturday, the task is not so hard.

At our church preaching services come first, then Sabbath school afterward. That is the secret of our large Sabbath attendance. All the parents, children and babies stay for Sabbath school. This has been the custom of this village church for almost 100 years. It might not succeed thus in other churches, though.

We have our dinner almost all prepared, and table set, before we go to church, and when we come home it does not take long to finish getting the dinner. After dinner, and the dishes are washed, we all read our Sabbath

school papers and the Bible. The young folks study their subjects for the young people's meeting. Often we take a stroll down through the orchard, across the meadow to the stream that runs along and through our pasture field. The children pluck the wild flowers, watch birds and butterflies and learn to love God for the beautiful world he has created.

On Friday, "speaking day" at school, Ann spoke a verse on Sabbath that describes the day very nicely. Seven little girls spoke a verse on each day of the week, then a little girl sang a song about the week's work to the tune of "Yankee Doodle." Ann's verse was as follows:

"Ho! Ho! Make way for Sabbath,
The day we love the best;
All work and play
We put away
For this, the day of rest.
Now father dear is with us,
And after church is through
He reads a book
In a quiet, shady nook.
I like Sabbath best, don't you?"

THE MARCH OF FASHION

WINTER STYLES are nearing their end, but, none the less, new models are being brought forward daily, and they are certainly of bewildering variety. The individual is free to choose the lines and garments that suit her best, for some are plain, some are full, some draped, and so on through the list.

Dresses for home wear are kept to almost primitive plainness. The waists are in many cases merely shirtwaists, some of them made with the pretty new yokes that are a feature of the present fashions. This yoke may be square or it may be pointed. In some of the models the opening of the neck cuts right through the yoke and meets the fuller portion of the bodice.

The sleeves of all the plain waists are likewise plain. The great majority of them follow the outline of the arm. They are inserted with little or no fullness at the shoulder and with quite a bit at the wrist. Here a band cuff and frill make the usual finish, although sometimes a deep shaped cuff extends quite far up the arm.

Other waists are made with the kimono shoulder and this is far and away the favorite for all but shirt-waists. When a change is desired the very low shoulder gives much the same effect and the making of the sleeve is then somewhat more simple. Besides, this style does not require material of quite so great a width.

Large armholes are shaped to fit the upper edge of the sleeve, and they are found in the more simple styles.

Skirts to match these plainer bodices are as plain as possible, with some effect of drapery. They are in most cases gathered at the top, at least across the back, and there is generally a festoon, or some pleats or other suggestion of drapery at the knee or at one of the side seams.

Owing to the width of most suit materials nearly all skirts are made with only two or three gores, as these cut without waste.

WANTED—A CURE FOR BABY'S INDIGESTION

Will some one of the kind readers of UP-TO-DATE FARMING please send a remedy for indigestion? My baby is 3 months old and has had indigestion all his life. I would like to hear from some one who knows a remedy. And a remedy or relief for asthma and catarrh. I am a reader of UP-TO-DATE FARMING and think it a good paper. I will be glad to hear from some one who knows these remedies.—Mrs. C. H. Barthold, Krum, Tex., R. 1, Box 82.

What is Now the Fashion

8248-T. APRON WORK BAG.—The sim-
ple embroidery design is transferred to one
end of a pair of lawn 18x36 inches, then em-
brodered in flat satin stitch, and outline in
any soft, dainty color.

11-9-14. EMBROIDERED FOUR-IN-
HAND TIE.—Ramilie linen is most suitable
for this embroidered four-in-hand tie. The
figures should be slightly padded and then
worked in satin stitch with silk of a darker
shade of the same color as the linen, or
one contrasting.

6418. LADIES' SKIRT.—Serge or che-
viot can be used to make this skirt. It is a
two-gored model and it is gathered across
the back in the new manner. The closing
is at the left side. Cut in sizes 22 to 30
inches waist measure. Medium size re-
quires 2½ yards of 54-inch material.

6335. BOYS' DRESS.—Linen, gingham or
percale make this dress, with the collar,
cuffs and belt of contrasting material. The
dress has three box plaits in front and
back, high neck, with wide collar and bishop
sleeves. Cut in sizes 1, 2 and 3 years.
Age 2 years requires 2¼ yards of 36-inch
material and three-eighths yard of 27-inch
contrasting goods.

6332. MISSES' AND SMALL WOMEN'S
DRESS.—Linen, serge or cheviot can be
used, with the collar and cuffs of con-
trasting material. The dress is quite plain,
with the drop shoulder and a puff sleeve
joined to a two-gored skirt. Cut in sizes
14, 16 and 18 years. Age 16 years requires
3¼ yards of 44-inch material and one-half
yard of 27-inch contrasting goods.

4595. BOYS' RUSSIAN SUIT.—For the
little people we have a pretty Russian suit.
This suit is plain and is provided with small
trousers. The pattern provides for a re-
movable shield. Cut in sizes 2, 4 and 6
years. Age 4 years requires 2¼ yards of
36-inch material.

6309. LADIES' SKIRT.—Two gores,
gathered at the top in the back. It has a
drapery suggestion at the side front seam
that gives it dressiness. Cut in sizes 22 to
30 inches waist measure. Medium size
requires 2½ yards of 44-inch material.

6381. LADIES' DRESS.—Simple enough
for home wear, yet effective for the street.
This has the new arrangement of yoke pro-
duced by extending the back over the shoul-
der. Cut in sizes 34 to 42 inches bust
measure. Medium size requires 4½ yards
of 36-inch material.

6437. LADIES' SHIRTWAIST.—This
dressy shirtwaist has a seamless shoulder
yoke and a very full lower portion and

sleeves. Will make up beautifully in ac-
cordion plaited material. Cut in sizes 34 to
42 inches bust measure. Medium size re-
quires 1½ yards of 44-inch material.

6417. LADIES' SHIRTWAIST.—Linen,
madras or China silk can be used to make
this shirtwaist. The waist is made with
a removable turn-down collar. The long
sleeves and high neck are used. Cut in
sizes 34 to 42 inches bust measure. Medium
size requires 2¼ yards of 36-inch material.

5630. LADIES' APRON OR HOUSE
DRESS.—This garment may be made to
serve as an apron or dress, or both. It is
of princess design, fastening at the left
side of the front. Gingham, linen or cham-
bray can be used. Cut in sizes 32 to 42
inches bust measure. Medium size requires
4 yards of 44-inch material and three-
fourths yard of insertion.

These patterns are guaranteed;
there are none better at any price.
Full directions accompany each. Give
number and size. Write your name
and address plainly.

Price of Patterns, 10 Cents Each

FASHION DEPARTMENT
Up-to-Date Farming Indianapolis, Ind.

Scrapple

We have just completed our hog killing
and I am very proud of my great store of
scrapple, which we all enjoy unusually well.
I sell all we care to let go at good prices.
To make it I take the heads, hearts, livers,
kidneys and lean bits of meat. Remove
the teeth, gristly ears, snout and as much
of the jaw bone as possible. Throw all
the meat into a big kettle, cover with water
and cook until all meat is separated from
the bone. Strain the liquid into another
pot and keep warm on the back of the
stove. Be very careful to remove all traces
of bone. Add the meat to the strained
liquor and place over the fire. Season with
salt, black pepper and sage; then, when
boiling, stir in cornmeal and buckwheat
flour mixed in proportions of two parts
meal to one of flour until all is of the con-
sistency of mush. Pour into deep pans
and put in the cellar.

shown in this or any other issue of Up-to-Date
Farming we will send you the very latest issue of
"EVERY WOMAN HER OWN DRESSMAKER" for
2c. Just send 2c for postage when ordering a pat-
tern. Address FASHION DEPARTMENT, UP-TO-
DATE FARMING, Indianapolis, Ind.

Garden and Orchard

BIG FRUIT GROWING ON ONE-SIXTH OF AN ACRE

"I have a city lot 100x180 feet, and on this lot I have 97 fruit trees and 7 Norway maple, 100 blackberry, 20 grape, 60 currant, 5 gooseberry and at least 3,000 strawberries, besides the garden truck I raise after office hours each day," writes a Pennsylvania man in Green's Fruit Grower. "It is a diversion I love and a healthful change from office work. Through 50 years of age, I can easily outwork any help I ever employed, for they can't stick. This morning at 4 o'clock, while it was yet dark, I took out some 300 tomatoes by the light of the city arc light, put the stock on the muck pile, harrowed the land good and deep and sowed 15 pounds of crimson clover, which I do every fall to get the nitrogen and humus next May when I spade it under. I must spade it all, for we have trees (the neighbors laugh and make fun of me) 12 feet apart. But you should see their faces when I take them in the pantry and show them some 300 jars of all sorts of fruits done up for winter (and you know who puts it up). My five children know what is a good, square meal all through the long winter.

"I just want to tell you something of what a man who is in earnest can do on one-sixth of an acre of ground. The experience I have had from this lot in the past ten years has taught me what I could have done had I had a chance on a farm, or at least on a thirty-acre place of fruit. I have practiced budding and grafting on all varieties of trees and love to watch the young shoots respond. My boy of 17 years has learned enough from actual practice to take hold of a fruit farm. My son planted a private hedge around my lot from cuttings we collected when a man cut his fence. From our hedge last fall I set out 3,000 cuttings in a sand bed and sold 750 to one man

for \$24.50 and 500 to another for \$12.50. One of our neighbors says \$200 could not buy the private hedge my boy set out for him this spring. We use the same care and precision in the field that I do in my technical work in the office, and it works out just as sure."

THE LIFE OF GRAPEVINES

By C. A. Green

I do not know of any certain age when it can be said that grapevines have a tendency to bear the largest crops. The crop of grapes will vary in different years for various reasons. Grapevines live to a great age, a hundred years or more, if nothing interferes with their health or vitality. At present the vineyards of Chautauqua County, near Brocton, N. Y., are said to be attacked with root worms, which consume the roots much as potato bugs consume the foliage of potatoes, thus these vineyards are yielding less each year, so I am informed. I saw the vineyards recently and they did not look thrifty as in former years. But you can rest assured that if a vineyard is vigorous and productive, showing no indications of disease or insect attacks, yielding large quantities of fine fruit, the canes are not too old to be valuable. Bear in mind that some varieties of grapes are longer lived than others. The Concord, Worden, Moore's Early, Campbell's Early and Niagara are all long lived grapes. I would not expect Delaware, Brighton, Agawam, Lindley or others of that class to be so long lived as those I have named, but even these will live long enough to pay for themselves a hundred times over in furnishing the food supply for a family. It is in the family garden and climbing over the farmers' houses and other buildings where the grape is most profitable. I estimate the grape vine trailing over the arbor of the house worth \$10 each year where it fruits abundantly, where the wife, sons or daughters can pick clusters daily as they see them dangling before their eyes.

From a Gardener's Notebook

There's no spot too rich for the garden.

The damp corner of the garden, if properly drained, is ideal for celery.

Keep in your mind the fact that the Garden special number of UP-TO-DATE FARMING is due February 15.

Good seed, good preparation, good cultivation and good care will make a good garden in any good soil.

Good blood tells in strawberry plants as well as in chickens or cows. Get good plants when making a new bed.

Did you ever grow any Golden Bantam corn for early roasting ears? Do it this year, sure. They are super-excellent.

Well-rotted barnyard manure is the one ideal fertilizer for the garden. Put a little acid phosphate with it and then watch things grow.

Every person with pride in garden stuff should have the best seed catalogs at hand, and now is the time to put in your orders for seeds.

Have you plenty of material for trellises? Are your bean poles, tomato stakes and pea brush ready? Now is a good time to look after such things.

Plant a short row of peanuts for the youngsters, right alongside the popcorn, and then let the children have their time next winter with home-made crackerjack.

Don't let disease get in your potato seed. And use formalin before planting and Bordeaux and arsenate of lead on the vines. A spray pump is a necessity in good gardening.

Have you planned your garden out, so you know when the early, medium

and late vegetables are to be planted in order to save the most time, space and labor? Do it this evening.

So many people fail to have carrots, parsnips and salsify for winter use. It's a great mistake. They're easily grown, easily kept and they go far toward helping the housewife with her dinners in the winter when green vegetables are scarce.

SPRAYING SUGGESTIONS

All chemicals used in spraying should be kept correctly labeled and out of reach of children.

Never spray when the trees are in bloom. This will kill the bees, which are necessary for fertilizing the flowers. Spray just before the buds open or just after the bloom has fallen.

Never put the lime-sulphur wash in a copper sprayer. The action of the chemical is very rapid upon the copper and will shortly destroy a copper sprayer. For spraying this wash use galvanized iron or a wooden receptacle.

In spraying, great pains should be taken to cover all parts of the tree, shrub or plant. If a heavy rain immediately follows your application of the spray the process should be repeated. Do not spray when the foliage is wet.

It is difficult to keep quicklime if the atmosphere is at all moist. Under these conditions the lime should be slaked with water while it is yet fresh. When slaked it may be kept for months if a little water is kept over it. In this form use $2\frac{1}{2}$ to 3 pounds to each pound called for in the formulas.

Bordeaux mixture should be applied several times, once before the buds break, once after the bloom falls, then after a lapse of ten days or two weeks. A fourth application can be made a week later. With some fungus diseases the Bordeaux can be profitably used every ten days to two weeks. If the lime-sulphur wash has been used the first application of the Bordeaux may be omitted.

Information about insects and insect pests and fungus diseases will be glad-

ly furnished if specimens of insects and their work be sent to your agricultural experiment station. Place specimens in a box, wrap neatly and put your name and address somewhere upon the package.

Indianapolis, Ind.

spring. So we will be very lonesome, but we have an organ and my sister plays the violin, so we can thus pass some of our time. I would love to exchange cards and letters with the Cadet boys and girls; will try to answer all I receive.—Grace Scott, Hastings, Ia.

DEAR CADETS—I am a farmer boy, 20 years of age, and have lived on the farm all my life. I like to read UP-TO-DATE. We have had it in our home about two years. I live on an 80-acre farm and we raise all kinds of small grain, but the country is pretty rough and heavy to work. I would like to receive cards and letters from the Cadet boys and girls. I will try to answer all.—Henry G. Langlie, Ashby, Minn.

It would be a pretty big trip were we to make it, but in our Cadet letters is but a step from Minnesota to South Carolina:

DEAR CADETS—I am a girl 15 years old and live on a farm two and one-half miles from town. Our principal crops are cotton, corn and wheat. My father runs the city filter plant. I wish to hear from all the Cadet boys and girls and will answer all letters and cards I receive.—Eva Spencer, Gafney, S. C.

Another southern girl becomes a Cadet. All sections are in perfect harmony in the UP-TO-DATE family:

DEAR CADETS—I am 18 years old and live in a small village in the western part of Louisiana. We have a nice school here and I go every day. We have a basketball team at school and I am captain of the first team. The Baptist Church is almost in sight of my home, and we have preaching twice a month. I am very fond of music, and can play some on an organ. I would like to hear from all the Cadet girls and boys and also to exchange photos. I will answer all.—Annie L. Pacundas, Walker, Louisiana.

Now we get back into Nebraska, where the farmers are getting ready to irrigate their crops:

DEAR CADETS—I am a farmer girl, 16 years old, and live on a 300-acre farm nine miles from the Tri-State irrigation ditch, which was completed this year, but the water was so late in reaching the farmers that it was not much benefit to them. Our principal crops are alfalfa and grain. I have read UP-TO-DATE FARMING for more than a year and think it a fine paper. I would like to exchange letters and cards with the Cadet girls and boys, and will answer all I receive.—Lesta Henderson, Angora, Neb.

DEAR CADETS—I am a farmer boy, 19 years of age, and live on a 320-acre farm near Ceresco, Neb., with my brothers and sisters and mother. My two brothers and I have done all the work on our farm for the last five years. We have 19 horses and mules, 21 head of cattle and 28 hogs. We had last year 145 acres of corn, 20 acres of oats and 40 acres of wheat. The oats and wheat were good, but the corn only made about 20 bushels per acre. We also had about 30 tons of hay. This is my first letter, but I have been reading UP-TO-DATE FARMING for two years, and it is one of the best farm papers I ever read. I would like to hear from the other Cadets.—George W. Boydston, Ceresco, Neb.

DEAR CADETS—I am a city girl, 16 years of age. My father takes UP-TO-DATE and I enjoy reading the Cadet letters very much. I think they are as interesting as any good story book. I would like to exchange letters and cards with the Cadet boys and girls.—Blanche Plummer, Oshkosh, Neb.

Hunting and Trapping

For Pleasure and Profit

REMINISCENCES OF BOB SNOW

(Concluded)

We did not go out that day, as it was snowing and blowing "great guns." We overhauled our traps, cleaned our guns and were busy until late in the afternoon. Chief decided to do a little experimenting in the way of cooking and hunted up the cook book. I knew that I would have to get supper myself or eat raw bacon and bread, for when Chief tries to hash up a new dish he always tries to improve on the recipe, usually achieving startling results, so I fixed up a nice rabbit stew, and when it was done Chief announced that his biscuits were ready to eat. But they were not eaten. I slipped one into my pocket to test my ax on it later. About 8 o'clock we turned in. The next morning we were up before daylight, and after eating a hasty breakfast we packed up and went out to establish our trap lines. We each took fifty traps and Chief's line ran south from our camp and mine north. We had been over the route before and knew where the best sets were, but it takes a good while to set fifty traps, and by the time I had set two-thirds of them it was getting late. Looking at my wrist watch, I saw that it was 2 o'clock. I stopped a bit and ate the lunch I had brought with me. Then, turning toward camp, I started back, describing a half circle, and setting the rest of my traps. It was about 6 o'clock when I got to camp, and found Chief had arrived a little while before. We were both tired, and ate supper. I rolled into my bunk as soon as we had the dishes washed up, and Chief, after a few attempts to get noisy on a harmonica, did the same.

The next morning we were on the trap lines early. My only catch was a rabbit, and Chief had three rabbits and a skunk. I would never have suspected Chief of having the skunk had he not been carrying it. You can usually smell a man who has caught a skunk before you see him, but not so with Chief. He is one "heap big" skunk hunter. He can skin a skunk so slick he never gets a bit of scent on him. He says the trick all lies in carefulness, and after taking a few lessons from him I found that it was. Be careful not to cut deep and you

are safe. Rub a little clay on your hands first, and after you are through skinning wash them. What scent is on your hands will come off with the clay.

HARD LUCK YIELDS TO PLUCK

Dear Tim—I would like to sit on the log by your campfire, if it isn't on the smoky side, to chat awhile. My mind runs back a few years to when I was in Garvin County, Oklahoma, farming. Cash rent and a crop failure broke me up. The three horses I had died. So you can imagine me and a younger brother up against a hard proposition in the dead of winter to make a living for mother and five small children. We asked all the neighbors for employment, but there was nothing to do. The last of our provisions were fast going and no chance to get more. So I said: "Bob, it is up to us and the old hound, 'Drum,' to catch opossum hides to buy a sack of flour." Mother gave us the game sack, wished us good luck and a safe return and we started. Drum had gone about half a mile when he treed a small opossum. Away again, we soon heard him bark "tree," and we took a medium-sized opossum. Next he "treed" a short-striped skunk, a dandy. "Hurrah!" said Rob, "he's good for 100 pounds of flour. A hundred yards farther he located another short-striped one and was off again. He treed a small opossum on the creek and started up the Washita river bottom. We hadn't gone far until we had another. Went on up the bend, crossed back over the creek and found the biggest opossum I ever saw roosting on a low limb. We reached up, took him by the tail, sacked him and we started for home, happy and telling each other of how we would do some trapping and make a little money. All of a sudden we heard old faithful Drum again. He only had a small civet cat, which ended the sport. We had five opossums and two skunks. We sold the furs of the night's catch for \$7.75. We bought a supply of grub and a dozen No. 1 1/2 Victor traps and put them down the river. We caught mink, skunk, opossum, coon, civet cats and two bobcats. We occasionally bought a few more traps till we had fifty-six traps. I would get up early every morning, walk the line and come back around the river, making a distance of seventeen miles a day, but in ten days caught \$49.80 worth of furs. We hunted three nights out of the week and ran the traps every morning. You may say that was some walking. Yes, it was, but it takes work to accomplish anything. We began hunting and trapping December 10 and by March 20 we had made a good living all the time, bought some clothes, bought a milk cow and had \$235 in the bank, which paid for a team and left some money to live on while making a crop. So you see where there's a will there's a way.

Well, the wind must be changing, for the fire is beginning to smoke. Good-by, Tim, and good-night, boys, I must be going. Say, Tim, tell the boys that trapping for profit is no lazy boy's job.—Lon Wilson, Lohoma, Oklahoma, R. R. 2.

We will close our department with the February 15th issue, when the prizes will be announced and the rewards sent to the various Nimrods who have contributed to the department. Letters to be published in the last issue (February 15th) should reach me not later than February 1st.

TIM.

C. B. Lozier, District Manager, Robertsedale, Ala.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the F. S. E.

For years the great farm problems have been:

1. How to increase the productivity of our acres.
2. How to reclaim our abandoned farms.
3. How to keep the men and boys on the farms.
4. How to secure farm help.

Much has been written and spoken for years on these subjects. They have been the chief themes of farm papers, and hundreds of millions of dollars have been expended, and plans almost without number have been proposed and some tried, to solve them.

So vital is a solution of these problems to future American agriculture—yes, to all of the people of America and all its business—that naturally everything that is done should tend toward their solution. But are we nearer a solution today than any time before? Or are we farther from a solution than before?

Since these questions are asked suppose we examine the case in all seriousness to determine whether we are going in the right direction for a solution, or whether we are headed in the wrong direction.

First, we believe we may accept as a self-evident truth that that business will not be abandoned that is as profitable and pleasant as any other business requiring equal application of time, intelligence and money. If this is true, then the reason the farms were abandoned, and the reason the boys and men did not remain on the farms, is because farming has not been as pleasant and profitable as some other lines of business.

If a manufacturer hopes to increase the output of his factory, or to hire more and better help, he knows that he must sell his products at prices that will give him enough profits to build larger, or buy more or better machines, and employ more and better help. True, he may borrow money to do these things, if his credit is good. And this is the plan some people propose for farmers. And if the manufacturer is selling what he makes now without enough profit to make the improvements, and then, when he has

more investment of borrowed capital he markets under the same system that does not protect him in the profits, it is easy to predict where his business will land.

From numerous evidences brought out by rural surveys, investigations, census reports and reports by the Department of Agriculture, the farmer who has been raising average crops has not been more than making his expenses. The only farmer, then, who made money was the one who raised considerable above the average yields. And, since nearly all the effort to help farmers has been confined to greater production, the greater the number of farmers who learned how to get bumper crops the more they pulled those down who had preceded them as successful producers. In other words, if the average farmer, who produces the average yields, and those below him, could be helped to produce the big crops, it would not be a boost to any one, but all would be pulled down as far as farm prosperity is measured by money receipts.

A luminous illustration of how this works is shown on our market page in this issue. Great success in producing in 1912 resulted in farmers being penalized \$534,359,000 on eight crops. That is, they produced the extra bushels and pounds and tons and gave them all away for nothing and lost more than half a billion dollars besides, as a penalty for their success in producing, when they could not control the crops when produced.

Our purpose in saying this is not to decry big crops, but the condition that permitted farmers to be robbed of a just reward following their successful performance in producing.

So, the solution of the four vital problems at the head of this article will not come through greater production alone, but it must come through greater production, accompanied by such selling of the crops as will always insure good profits.

Secretary Houston said recently: "I do not entertain the thought for a moment that we have approximated the limit of our output from the soil. . . . but we can no longer rely on the bounty of nature. There is evidence that Providence is ceasing its protection of fools and Amer-

icans. . . . According to the best guesses I can secure, less than 40 per cent of our land is reasonably well cultivated and less than 12 per cent of it is yielding maximum returns. . . . The story that comes from every section is substantially the same; it is a story of increased tenancy and absentee ownership, of soils depleted and exploited, of inadequate business methods, of chaotic marketing and distribution.

Then what is needed, according to the secretary, is to increase the output of our soils; to rebuild our soils; to adopt better business methods in marketing and to reduce tenancy and absentee ownership.

These are some of the conditions that are deplored and some of the conditions that must be remedied before American agriculture will be what all good people hope it will be, and which it must be if we hope to feed our own people instead of turning the contract over to foreign countries.

And now let's see whether farmers' friends and the government are leading in the right direction, or in the opposite direction.

This is the condition: Production per acre has not increased in the last fifty years. Farms have been abandoned. The best men and boys have left the farms and it is difficult or impossible to secure farm labor at prices farmers can pay.

With this condition staring us in the face the last Congress removed the protection from farm products and put the farmers of the world on an equality with our own.

Thus, our high-priced farms that have been robbed of their natural fertility are put in direct competition with the cheap virgin soils of Canada

and Argentina. Our acres that produce meager yields of grain, vegetables and potatoes are brought into direct competition with the acres in Europe that produce double to four times the yield. Our country, which has land enough to feed the world, after its fertility has been drawn down to near exhaustion, and just at the time when prices were getting on a basis that would afford building up the soil, is thrown open and made the dumping grounds of the products of cheap labor, cheap soil and the highly productive soils of the old countries.

The crying need of our agriculture has been greater acre production. Every country that has a highly efficient agriculture protects its farmers from cheap outside production. But our lawmakers have done the opposite. We need a more efficient agriculture, but they say it must compete with the world.

The demand is for greater live stock production. But instead of protecting the American industry, it is made to compete with the cheap lands and vast ranges of Argentina and Canada. To illustrate: The Department of Commerce says: Food importations are showing marked increases. Importations of fresh beef were five and two-thirds million pounds in October, but increased to 10,856,000 pounds in December.

Importations of oats in November, 1913, were 5,132,000 bushels, against only 4,266 bushels in November, 1912. Similarly wheat, live cattle and potatoes increased, as shown by the same report.

A market dispatch of January 6th said: "Cheap offers of corn from the Danube country and Argentina caused

Startling, Exclusive Improvements Mark the 1914 Harley-Davidson

Step Starter Starts Machine With Rider in the Saddle and Both Wheels on the Ground

In case the rider accidentally stalls the motor in crowded traffic or on a steep hill it is no longer necessary to dismount, perhaps in the mud and find a level place to set the machine upon the stand in order to start the motor. Instead a downward push on either pedal—the step-starter does its work, and the motor begins again to throb.

Selective Type of Two-Speed

The Harley-Davidson two-speed gear (another patented feature) is located inside the rear hub, thus avoiding dust, dirt or damage. Its speeds are selective and the rider can shift from low to high, or high to low, or to neutral, at any time, whether the machine is standing still or in motion.

Ful-Floting Seat

For the third successive year the Ful-Floting Seat is standard. This patented device floats the weight of the rider between two concealed springs, assimilating all jars and vibration due to rough roads.

Double Clutch Control

The patented Harley-Davidson clutch can now be operated either by a foot lever on the left foot board or by a hand lever. The foot lever does away with the necessity of taking either hand off the handle bars, a great convenience when riding through sand or mud.

Double Brake Control

The new Harley-Davidson Band Brake (patented) can be operated either by a foot lever or by back pedaling on either pedal.

Folding Foot Boards

All models are equipped with Folding Foot Boards in addition to the regular pedals.

We will gladly send you on request our complete 1914 catalog giving full details of these and forty other improvements

Harley-Davidson Motor Co., 874 A Street, Milwaukee, Wis.
Producers of High-Grade Motorcycles for More Than Twelve Years

the price to go down 1@1½c today." The price of corn is lower in New York than in St. Louis and Kansas City.

Eggs are coming from Europe, Canada and China, beans from Canada and Europe, cabbage from Europe. And the only reason they do is because the growers in those countries are willing to take less for them than our own farmers have been growing them for.

The question naturally arises: How are our farmers to build up the fertility of the soil and increase the yields and reclaim abandoned farms under this system?

We fear that we have only made a beginning at abandoning farms if the present condition continues long. That is lack of organized marketing and lack of protection to American farm products.

The way we see it is all a marketing problem. And the problem of marketing can only be solved through an organization with a successful marketing system. Such a system as has solved the marketing problems of manufacturers, and such a system as railroads have to keep track of where their cars are, where the demand needs them, and enables them to be sent to the demand. Not two or three cars for each car load, but one car wherever there is a car load of freight to move.

And when farmers have such an organization for business, they can use it to get protection on their products again, if free trade does not prove as good as its friends hoped, and if it proves as bad for the country as we fear it will

Such an organization Secretary Houston looks forward to. We quote him further:

Through the right kind of an organization the prices of farm products can be maintained at a higher level without increasing the cost to consumers, and farmers will then be justified in increasing the output of their farms with a prospect of realizing a reasonable profit on their investment of time, labor and money.

This brings us squarely up to the question whether there is such an organization now.

The Farmers Society of Equity is such an organization. The Equity System of Marketing, now in operation, brings the successful business system to the aid of every community that cares to adopt it, and the broader scope of the organization, providing for a

THE BLANK

Farmers Society of Equity, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

This list was sent by

P. O.

Co. State

Write Distinctly and give Postoffice

- 1
- 2
- 3
- 4

(For more names attach paper. We will write a letter to all names and send literature.)

plan for established associations to federate, now puts directly before farmers the prospect of early completing their own business system and marketing machine.

If your community is not organized, send the blank below. If it has a farmers' club or association now, send the blank. We will send full instructions how to proceed to organize or federate, and at once connect up with the national marketing machine.

The whole country is aroused over the marketing problem, which is the key to the solution of all of the farmers' problems. The need for the right kind of organization to make co-operation fully effective is obvious. The task is not difficult when the right plan is at hand. We should not be surprised if farmers will solve their marketing problem this year, but rather we should be surprised and astonished if they do not.

Somebody in each community send this blank and get our proposition. We will pay for work done.

IMPORTANT NOTICE
To Members of the F. S. E.

Several copies of the pamphlet, Report of the Proceedings of the Fifth Annual Convention of the Farmers Society of Equity, have been sent to each local clearing house secretary.

The secretary has been instructed to read the report at the next regular meeting. If no regular meeting scheduled, he should call a special meeting. The proceedings should be discussed and headquarters will appreciate a report of any action taken on them for its information as to how the acts of the convention were received.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

Bruning Clearing House, Bruning, Neb., (E. Wilhelms, secretary) wants to buy corn and hay, and they have alfalfa seed to sell.

R. D. Rockwell, member of Maquoketo (Iowa) local, has five recorded Shropshire bucks and three lambs that can be recorded. Price \$15 each for bucks and \$10 each for lambs.

A. H. Pierce, member of same local, has four Buff Orpington cockerels at \$2.50 and seven Golden Red brood sows, weight 150 pounds, price \$15 each, for sale.

The same local (C. B. Breeden, secretary) wants to buy some Dorset ewes and some Buff Wyandotte cockerels.

QUESTION—We are in need of a canning factory. Please instruct us on organizing a company; also tell us where we can get the machinery.—C. A. Larson, secretary, Cedar Hill, N. M.

ANSWER—Incorporate your company. See a local attorney. Decide on capital needed. Raise the capital by issuing stock. Agree to pay the legal rate of interest on the money raised, but no dividends. Operate the factory for members only. Don't buy the crops, but work them up for the account of the members. Sell or store product. If stored, you can get cash advances. Decide on a per cent to be held out of all proceeds from sales to meet expenses and ultimately to retire the stock—pay the money back to those who advanced it.

Write to the following for machinery: Sprague Canning Machinery Company, 5 Wabash avenue, Chicago, Ill.

Vance & Aker Manufacturing Company, Twenty-second and Wood streets, Philadelphia, Pa.

Sinclair-Scott Company, Baltimore, Md. Burden & Blakesley, Cazenovia, N. Y.

A. L. Cross, who announced through these columns that he had dried peaches to sell, reports that he has sold all of his, but can supply any quantity desired from his neighbors at 4½ cents to 5 cents a pound. In his section they pay \$1.25 a bushel for milo and kafir corn for chicken feed. He wants to know if our members can supply it for less money. Address, Ingsbury, Cal.

No Wonder

"Blinks is real witty, but he inherits it." "Yes, that explains why his jokes are so old!"

Equity Field Work

Coming Right Along

The Farmers Society of Equity is doing a landslide business out here. Three locals have affiliated and employed an agent or manager, put in platform scales at Michigan, and we are now shipping a car of wheat and barley daily, getting an advance of about 15 per cent over prices locally paid.—S. R. Phillips, secretary, Crystal, Idaho.

Only Needs the Right Men

My great regret was not to be able to attend the national convention. It would have been a great help to me, and then I should have liked to help form plans for better work. I believe our society will, in the near future, become one of the grandest organizations in the world. Our local is growing. We have fifty members now, at seven months of age. We have earned profits to the extent of over \$600 already. The greatest difficulty I have is to find time to get to the places where organizations are wanted. All that is needed to make a great success in this movement is to put good men in the field to organize.—H. L. Click, Chadron, Neb.

Over \$150 Monthly Saving

We have been organized three months, and while, so far, we have not had much to ship out, we have had a great deal shipped in, notwithstanding we are but twenty-five or thirty members strong. We have purchased as follows: One car wheat, two cars oats, one car cottonseed meal, two cars corn, one car mixed feed, and a large supply of honey, on which we saved a total of \$450.45.—John A. Morrison, secretary, Thayer, Kas.

From an Old Friend

Dear UP-TO-DATE Friends—We are in the part of Oklahoma where it seems the drought hit the hardest, and things surely look dark for the people of this section, mostly all renters. The crops here are cotton, corn, oats and a sprinkling of kafir corn, all of which burned up in the drought, except oats, and only a small acreage of oats was put in. There is no hay or feed of any kind and the people, of course, have no money to buy with.

I can't see why our agricultural advisers and teachers don't try to help Mr. Everitt in the fight for the farmer. They continue to work at the lower end of the streams to cleanse the fountain, when the way is so plain and simple that a "fool" need not err therein. Control of the farmers' business, by the farmers, as every other business does. Easy, dead easy, to see how others do it! Why not the farmer? Because he listens to the wrong teaching and travels in the same old rut that leads to ruin and holds back the relief the organized farmers are trying so hard to gain for all. It looks hard to be taxed to support people who do the wrong thing for us. Instead of helping the farmer, they boost him on down the hill by causing him to increase his efforts in producing more stuff, when what they truly need is a system of marketing, in Equity, to build up a prosperous and a happy land. Go ahead, Mr. Everitt. The truth can never die, and you will win if the farmers will only help you. We know you are right. Your instructions are like Solomon's proverbs—great, deep facts.—Mrs. S. E. Sowers, Sharp, Okmulga County, Okla.

Institute Workers Dodge the Real Issue

After attending a meeting of the Farmers Institute today at Morristown, S. D., I feel like expressing a few comments on same. The speakers were very good talkers and had figures from various experiments to show the way to produce larger yields—namely, by more care in seed selection, deeper tillage and proper rotation of crops.

The deep tillage was demonstrated by charts and figures to have paid a profit at the experiment station, while shallow cultivation netted a loss. Proper crop rotation also was shown to have its benefits.

When it came time for questions the institute workers were asked if they did not think it wise and proper for farmers to study the price proposition along with the rest of it. That the total number of bushels of wheat produced in 1913 was greater than 1912 and the total amount paid the farmer for wheat was considerably greater in 1912 for the smaller crop.

The institute speaker said this was not true and was only some misinformation. I told him he certainly was too well informed a man to deny that—I had seen it in the secretary of agriculture's report. A second institute speaker then came to his rescue and said he had seen this and had studied over it until late hours at night and had come to the conclusion that it was unfair to compare last year's price with this year's price. It was only proper to take ten-year stretches, he said, and if we did that we would find that prices were getting better.

"But," I asked, "I mean would it not be good sense and business to study this price proposition along with the better farming ideas?" He answered, saying "I do not believe in producing less for the sake of rais-

LITTLE GIANT CORN SHELLER

Just Out and Entirely New

This sheller is a little wonder. Will do the work equal to any other hand sheller. No springs to jar loose, and a just adjustment simple and accurate. Impossible to get out of order. The sheller deposits the corn in the box on which it is mounted, and the cobs outside. Is made on honor and will last a lifetime. Will easily shell eight bushels per hour. Price 75c F. O. B. here.

O. K. SEED STORE
INDIANAPOLIS INDIANA

ing prices." Then one leather-headed farmer got up and said he thought he got more for his crop this year than last. The institute men, as they style themselves, all said a sort of "amen" to that and went on to tell the farmer he did have a hard lot, was much abused and called "hayseed" and other bad names, but they were here to help him and if he would only work harder, be more careful, plow deeper and take good care of his seed and the farm, maybe after a time enough would be produced to reduce the cost of things and the farmer would have cheaper things along with everybody else.

This is the lesson farmers are taught by the paid hirelings of I don't know who. I have given you the lesson as it was given to us today. I could say much, but I will leave it for you to discuss in your UP-TO-DATE farm paper if you see fit, as your ideas usually run in line with common sense and business farming.—Walter R. Cibart.

Idaho Equity Makes a Record

No other local in the state of Idaho promises better than the Richfield branch of the society. It started with the largest charter membership of any branch yet organized, and new members are coming in to warrant the belief that it will continue to be the liveliest of all the locals.

It is proposed that the local have a big social and business session about the first of February, with a banquet and a royal good time that will help bring the people together. An oyster feed is proposed, to which the wives and families of the members are to be invited the same as the men, and all will enjoy a whole day of good things.

It is expected that by next crop season the society will make advances to growers on all the crops that are consigned to the society, and can have its market arrangements so well perfected that no commission house combines can seriously affect its marketing of crops at the highest prices. The society promises to revolutionize the business of distributing Idaho's farm and other products at prices that will be profitable to the grower and still farther to the consumer than they have been heretofore.—From One of Them.

Young Men Wanted Out West

There is a scarcity of good farm help here at present. Wages are good, and there are good opportunities for young men who understand farm work, especially married men, as many farmers want a man for outside work and his wife to attend to the house work.

Stevensville is located in the Bitter Root Valley, which is considered a very desirable place to live, with its healthful climate and beautiful scenery. Further particulars will be furnished upon application.—Fred Reynolds, Stevensville, Mont.

Too Many Milk Wagons

Herbert S. Lucier, a "consumer" living in Chicago, went out the other morning to find seven milk wagons, each representing a different establishment, delivering milk in one short block. He wrote a letter to one of the city dailies stating that one wagon could have done all the delivering for the block, and advocated a municipal milk department for the city to cut down the cost of distribution.

New York vs. Chicago on Parcel Post

A New York postmaster states that the parcel post is making great inroads on the cost of living, because over 100 packages of poultry were received by the post at an office in New York city in one day. One hundred fowls will not go far toward feeding four million people. Daniel A. Campbell, postmaster at Chicago, says the effect the parcel post has on the cost of living is not worth considering, and believes it will not be until there is established co-operation among farmers for establishing a supply that will meet a permanent demand and for shipping facilities to insure the demand will be supplied. Mr. Campbell says that farmers are in need of education in scientific packing.

Argentina Pays High for Cattle

The champion shorthorn bull Americus was recently sold at auction at Buenos Aires, Argentina, for \$80,000 in South American money, equivalent to \$35,200 in United States money. Another one brought \$29,800. A total of seventy-seven head were sold in one day, bringing \$262,500 in American gold. This does not look as though Argentina expected to produce cheap beef.

Prior to the sale of Americus for \$35,600, the highest price ever paid for a shorthorn was paid for a cow, Eighth Duchess of Geneva, sold at auction in New York Mills in 1873 for \$30,600. The highest price ever paid in England for an animal of this breed was \$26,904, for the bull Duke of Connaught.

Indiana Farmers Add Another Co-operative Enterprise

Charles E. Eckerle, organizer of co-operative companies throughout the middle west, states that ninety-eight farmers' co-operative companies have been incorporated throughout his territory and are in successful operation. The last one organized by Mr. Eckerle is located in Madison County, Indiana, by farmers living in the vicinity of Frankton. One hundred and thirty farmers have taken shares in the new enterprise,

of the first enterprises to be undertaken will be to purchase and operate a grain elevator which will be capitalized at \$10,000. One at Frankton.

County Agent Butler of the same county is compiling the agricultural statistics of the county, including farm acreage, crop acreage, improvements, silos, stock, etc. It is the intention to use this information in the public schools of the county.

Cutting Out the Packers

William Burgess, a farmer near West Cairo, O., owns nearly 100 head of beef cattle, which he intends to butcher and deliver direct to the city instead of having the live cattle sold to packers, shipped to central packing houses and the meat shipped back. Other farmers are to unite in the movement, and the local supply is said to be equal to the local demand. The farmers expect to obtain better prices for their cattle and supply consumers at lower prices. This may be the beginning of a co-operative abattoir, a necessity to make economical use of the waste products.

Cincinnati Housewives Attempt Co-operation

The women of Hyde Park, a suburb of Cincinnati, O., are trying an interesting experiment in their Housewives' League, an organization pledged to buy from the producer direct, on the theory that the consumer might well save the profit which usually goes to the middleman. In the plan adopted the league has an agent who solicits orders for foodstuffs, such as bacon, eggs, butter, potatoes, apples and so on, and buys a very considerable quantity directly from the producer. On delivery the consignment is divided up into small lots and delivered to the individual buyers for cost price, plus a fair charge for delivery.

The idea is not new, but so far as Cincinnati is concerned the women of Hyde Park appear to be pioneers. To have any effect upon prices, such movements as these must be widespread and persistently pushed.

Farmers Employ a Traveling Salesman

At a meeting of the board of directors of the Ponchatoula Farmers' Association, Ponchatoula, La., J. E. Hudson was appointed bookkeeper and head of the office force at a salary of \$125 a month. During the dull season, when there is no shipping going on, it will be the duty of Mr. Hudson to travel through the north and east and acquaint himself with the different firms of produce buyers, and to find the best channels for the outlet of the half-million-dollar strawberry crop which is predicted for next spring. Last season's crop totaled \$300,000, sold in Ponchatoula, f. o. b. cars.

New Yorkers on the Warpath

Governor Glynn called together a number of prominent New York citizens to confer upon the high cost of living. Calvin J. Huse, state commissioner of agriculture; Mrs. Julian Heath, president of the American Housewives' Leagues; Oscar Strauss, known to everybody; E. P. Harris, president of the Montclair Co-operative Society; Edwin F. Howell, of the New York State League of Savings and Loan Associations; Hal B. Fullerton, of the experimental farm of the Long Island Railroad; F. S. Walsh, of the New York Central Railroad; Marc W. Cole, superintendent of the New York State Bureau of Co-operation; H. V. Bruce, of the Markets Commission; William Church Osborn, Miss Laura A. Cauble and R. B. Van Cortlandt of the American Agricultural Commission were in attendance. Committees were appointed to begin plans for the foundation of consumers' associations, and to reorganize the distributing system.

Uplift With Power to Pull

Ashland, Wis., has a co-operative company trying out a co-operative cow-buying and rural credit experiment. About fifty farmers are in the plan, which has the support of two local "national" banks and the Ashland Commercial Club. Farmers borrow the money at 7 per cent, on notes payable in monthly payments running three years. Improved cattle are bought with the money. Five car loads of high-grade and registered Guernseys and Holsteins have been put in operation, prices of butter fat are 2 cents above the Chicago market, and cream checks are in evidence in bank clearings. The old spirit of suspicion and misunderstanding has disappeared which formerly existed between rural and city residents, and banks are extending credit accommodations to farmers who a year ago were unknown.

Dairymen to Improve Cows

A Chicago live stock journal tells us the dairy farmers tributary to that city are going in for better stock to make each cow make higher profits. The expense of feed in keeping the average cow one year is said to be about \$60. Income from milk, calf and manure, \$160. Net profit, \$100. With better stock, profits could be greatly increased, says the journal.

A Fishworm Farmer

J. D. Moon, a Michigan man, is making a good living raising big, fat angle worms for fishermen. He raises them in hollow logs and feeds them twice daily on coffee grounds and cornmeal. Domesticated worms are said to be far superior to the wild variety for bait. Mr. Moon learned the business from a Shoshone Indian in the Big Horn Basin, Wyoming.

High Prices for Produce in Iowa

"A reward will be offered by statisticians for a Cerro Gordo County farmer caught hauling a potato to Mason City, the county seat" is the announcement of the Mason City Times, which complains that old High Cost of Living has encamped in that town. It gives the following schedule of prices: Potatoes are wholesaling to middlemen for from 70c to 78c per bushel. Cabbages sell for from 2c to 2½c per pound. Turnips, \$1.25 per bushel. Carrots in half-barrel lots wholesale at \$1.25. Parsnips are the same. Onions wholesale at \$2.50 per hundredweight. Eastern apples are scarce and are selling now at from \$4 to \$4.50 per barrel. Western apples wholesale from \$2 to \$3 per box, according to the variety and quality.

A Judge of Great Judgment

Judge F. T. Wilson of Stillwater, Minn., is out advocating that the state university train men to organize and manage agricultural co-operative societies and organizations, asserting that scientific marketing is just as essential as scientific production. Judge Wilson is strongly in favor of federating all agricultural organizations for co-operation in marketing.

Wages and Men

Minister—So you think, deacon, this church ought to pay its preacher a better salary?

Deacon—Indeed I do, for then we'd get better preachers.

BUSINESS EXCHANGE

CLASSIFIED DEPARTMENT

Real Money-Saving, Money-Making Opportunities—You Can Sell Anything or You Can Buy Almost Anything by Placing Your Offer Before Our Million Readers

FARM LANDS

IN THE SWIGART TRACT of western Michigan are some of the best general farming lands; good opportunities in stock, poultry, truck, dairying and diversified farming; center of fruit belt; large profits in fruit growing; Lake Michigan harbors; four railroads; 8½ hours from Chicago; \$10 to \$35 per acre, and most of the land \$17 per acre; \$10 to \$20 down and \$5 to \$10 per month on 40 acres. Annual terms if preferred. If you should die the land will be deeded to your family free from further payments. Prices higher in spring. Ask about privilege of exchange, seed supplying arrangement, instructions to settlers by experts, power dams to be built. A thousand 40-acre pieces from which you can choose; 10 and 20-acre tracts near growing towns. Write for my 72-page booklet and plans now. George W. Swigart, owner, Z-1250 First National Bank Bldg., Chicago.

296 ACRES of rolling Ohio farm land, suitable for stock, fruit or general farming, in a prosperous community, on good stone pike, half a mile from railroad station, 7 miles from county seat; fair farm house of about 8 rooms, barn and some other buildings; 500-tree orchard, 3 years old; neighbors, who should know, think it is worth \$30 to \$35 an acre. I bought it at sheriff's sale (debt was about \$9,000); live 100 miles away from it, so can not use it. Will sell for \$7,500; only \$25 an acre; \$2,500 down, balance \$500 a year. D. P. Cooke, Columbus, O.

FARMS WANTED—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis Minn.

ELEVEN HUNDRED and forty acres land; price \$7 per acre; will make ideal stock farm; good improvements, good soil, lies level to rolling; none subject to overflow; plenty running water, good grazing; three hundred acres in cultivation. Address W. S. Cameron, Pine Hill, Ala.

SIX HUNDRED and eighty acres land; price \$15 per acre; fine soil, lies level to rolling; three hundred acres in cultivation, balance good; good improvements; no subject to overflow; plenty running water, good grazing; will make fine stock farm. Address W. S. Cameron, Pine Hill, Ala.

\$10,440 BUYS 261 acres 30 miles from Buffalo; all level, rich black loam soil, 60 acres valuable timber, large orchard, buildings worth \$12,000. Free list. C. J. Ellis, Farmers Bank, Springfield, N. Y.

SUNNY TENNESSEE, where low-priced improved farms, health conditions, long-crop seasons welcome the farmer of limited means; 162 acres, \$1,200; 194 acres, \$1,500; free list. Jenkins & Son, Huntingdon, Tenn.

WANTED—To hear from owner who has good farm for sale. Send description and price. Northwestern Business Agency, Minneapolis, Minn.

SELL YOUR PROPERTY quickly for cash, no matter where located; particulars free. Real Estate Salesman Co., Dept. 6, Lincoln, Neb.

TWO HIGH AUTHORITIES ON MARKETING

Secretary of Agriculture Houston says:

In the field of marketing there is also danger that pressure will be brought to bear upon us to act everywhere before we are prepared to act intelligently anywhere. Not that assistance can not be given here and there, and not that the Department is not furnishing and will not furnish information of great practical value to individuals and communities. The Department has arranged its marketing investigations under five important subdivisions:

First, marketing surveys, methods and costs, including especially available market supplies in given production areas, demand at consuming centers, cold and other storages, marketing systems and prices, and costs of wholesale and retail distribution of farm products.

Second, transportation and storage problems, having in mind the elimination of waste and the study of problems connected with surplus market supplies, terminal and transfer facilities, including freight congestion, car supply, deterioration in transit, extension of the practice of precooling of perishable fruits and other special services.

Third, city marketing and distribution investigations, involving a study of the uses and limitations of farmers', municipal, wholesale and retail market houses, systems of city distribution, the promotion of direct dealing between producers and consumers by parcel post, express and freight.

Fourth, study and promulgation of market grades and standards; a consideration of sizes and suitability of packages and containers, methods of preparation of perishable products and the ultimate establishment, so far as practicable, of official market grades and standards for farm products.

Finally, co-operative production and marketing investigations. The Department has done much work in this field through various agencies. It has established standard cotton grades and has practically completed its standard corn grades. It has given much attention to the cold storage problems, to the packing and handling of perishable fruits. It is convinced, as you are, of the existing chaos and of the consequent wastes—waste resulting from faults on the part of the farmer in growing and handling of his products; waste resulting from the machinery of distribution, including physical equipment and physical handling; waste resulting from the manipulation of those middlemen who perform no clearful, useful and necessary service, and waste resulting from ignorance on the part of the consumer and of the producer and of the character of the product which is placed upon the market. The producer of any product is entitled to receive an exact price for the specific product which he offers, and the consumer is entitled to receive just the commodity he thinks he is paying for.

Dr. T. N. Carver, director of rural organization service in the Department of Agriculture, says:

As to organization in marketing in general, I think it is very important that the farmers remember that they are not likely to gain much by merely putting marketing experts out as though they were commercial travelers to sell stuff for the farmers. So far as I have discovered, the only marketing organizations that have succeeded permanently have succeeded for four reasons:

1. They have learned through their associations and discussion how to grow better products than they had grown before.
2. They have learned to grade and standardize their own products instead of selling them in a nondescript mass for others to grade and standardize.
3. They have adopted brands and trademarks for their graded products and protected the reputation of these brands and trademarks as carefully as business men protect their signatures.
4. They have taught the buying and consuming public as to the meaning of the brand or trademark and the quality of goods which it represents.

There is thus no magic about co-operation or organization. Its first beneficial result is to improve the quality of the service which the farmers themselves are trying to render. It makes them, therefore, deserve better success than they have been having before. Then by the use of intelligent methods the success which they have come to deserve is secured for them.

So the farthest the secretary has gone until this time is to investigate and continue to investigate. Any intelligent producer, and every business agent for a farmers' organization, knows now where the trouble is. They know that the trouble is in lack of control of their own products and lack of a definite knowledge of how much demand exists on each market and the lack of a system by which just enough supply, and no more, can be sent to each market. If these are the troubles, then why is it necessary to waste more time in investigations? If these are the troubles, and there is no cure for them, then let's submit and waste no more time and money that will find just these things. But if

there is a cure—if a system can be devised after months of further investigation—then why not devise the system now and put it to work at once? Such temporizing raises the suspicion as to whether the men are really sincere in their work. It looks a good bit like throwing sand in the farmers' eyes to bewilder them.

And Director Carver has not yet announced anything new. Everybody knows that choice products sell for more than inferior ones and that grading is important. But if a market is glutted with choice fruit or vegetables or grain, we have our old trouble of unprofitable prices. "Branded" and "trademarked" products are not a guarantee of profitable prices while the other fellows make the prices. What Dr. Carver means by "intelligent methods" we don't know. If he has a plan for intelligent methods of marketing he may hold the key to the problem. But he does not say so. On this important point he is vague, if he has touched on it at all.

Such declarations get farmers nothing and they go nowhere. Either the leaders don't know what to do or they are afraid they will hurt the "interests" if they go ahead and do something to bring the producers out of the wilderness.

We have often said that as long as farmers depend on other people, even the government, to give them a satisfactory business system, they will always be wanting it, but they will not have it. They must depend on themselves. They must be self-reliant. There are tens of thousands of them know now what their troubles are and they know better how to solve them than Dr. Carver will know in years. Farmers live with their business all the time and they have had their problems always with them. Secretary Houston and Dr. Carver are just learning as they admit—investigating. One farmer in each of one thousand communities co-operating with the Farmers Society of Equity can cure the disease before the doctors diagnose the case.

Meeting Dates

Emil E. Larsen, secretary Camino Local Clearing House, Camino, Cal., requests us to announce their regular meeting date, which is the last Saturday in each month

at 1 p. m. We are glad to do this, and we would like to do the same for other locals. UP-TO-DATE FARMING would be much more interesting and valuable if members and officers would use it more for society matters. The annual convention requested space for the news of the different parts of the country. The request was granted. We are now waiting for the news. Just think what it will mean to carry your announcements not only to all your members, but all the members in the country! Ready?

Bargains Depend

Nix—Yes, my wife is great for bargains. She won't buy a dollar's worth of anything unless she can get it for 90 cents. But when the dollar is coming from me she won't even take 99 cents

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

Milne's Stump and Tree Puller

clears a two-acre circle with one sitting—pulls stumps, green trees and hedges quick and easy. You can pull trees faster than you can cut them down, leaving the land clear for cultivation.

All Steel Combination Stump Puller

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package Is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to Mr. A. L. Rice, manufacturer, 59 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

Buy With Your Neighbors—Save Fence Cost

Write us for special low prices on co-operative buying of Empire Fences. Get your neighbors to join you in ordering. We will quote you lowest wholesale factory prices. Joseph Stangle, Constantine, Mich., writes: "Empire fence can't be beat. My fence, put up seven years ago, as good as the day I got it. Expect neighbors to go in with me to make up big orders." Ask for FREE BOOK of facts about fence quality; illustrates and describes.

No. 9 Empire and Empire, Jr. Open Hearth Steel, Big Wires, heavily Galvanized

This book will show you why the No. 9 Empire and the Empire, Jr., made of Open Hearth Steel, great big wires, galvanized as a wire fence should be galvanized, will outlast any soft Bessemer steel fence ever made. It illustrates our big wires—the strong Empire knot that holds good as long as the fence. It will show you why Empire fences are proof against any and all kinds of weather, rust, rot—proof against the hardest use—why they do not sag, why they stay hog-tight and cat-

tle tight as long as they are in use—why they are by far the least expensive fences to buy in the long run. Farmers, everywhere, are investigating fence quality. Users insist on knowing the quality underneath, just as they know how to judge a horse. You cannot fool an experienced buyer with an old horse doped up—look like a good horse. You cannot fool an experienced buyer with a poor fence doped up to look like a good fence.

Bond Steel Post Co., 61 Maumee St., Adrian, Mich.

NEW Edison Phonograph (Mr. Edison's Latest Invention) Now Shipped FREE!

WRITE today for our new Edison catalog—the catalog that tells you all about the wonderful new model Edison with Mr. Edison's new diamond point reproducer—the new parlor grand style. It will also tell you about our new Edison offer! Now read:

The Offer:

We will send you the new model Edison Phonograph and your choice of all the brand new records on an **absolutely free loan**.

We want you to hear all the waltzes, two steps, vaudevilles, minstrels, grand operas, the old sacred hymns, every kind of comic and popular music, also your choice of the highest grade concerts and operas, as rendered by the world's greatest artists. Entertain your family and friends. Give plays and concerts right in your own parlor. Hear the songs, solos, duets and quartettes, the pealing organs, the brass bands, the symphony orchestras, the choirs of Europe's great cathedrals, the piano and violin concerts, virtuoso—all these we want you to hear free as reproduced on the new Edison. **Then, when you are through with the outfit, you may send it back at our expense.**

Remember, not a penny down—no deposit—no guarantee—no C.O.D. to us—no obligations to buy—a full free trial in your own home—**direct** from us—**direct** to you. Returnable at our expense or payable (if you want to keep it) at the actual rock-bottom price direct from us.

The Reason: Why should we make such an ultra-liberal offer? Why should we go to all this expense and trouble just so you can have all these free concerts? Well, we'll tell you: we are tremendously proud of this magnificent new instrument. When you get it in your town we know everybody will say that nothing like it has ever been heard—so wonderful, so grand, so beautiful, such a king of entertainers—so we are pretty sure that at least some one, if not you, then somebody else, will want to buy one of these new style Edisons, especially as they are being offered now at the most astounding rock-bottom price and on easy terms as low as \$2.00 a month. But even if no one buys, there is no obligation and we'll be just as glad anyway that we sent you the new Edison on our free trial; for that is our way of advertising quickly everywhere the wonderful superiority of the new Edison.

Mr. Edison's Pet and Hobby

among all his wonderful inventions is his phonograph. He worked for years striving to produce the most perfect phonograph. At last he has produced this new model. Think of it: over 25 years of work on all these epoch-making inventions—then his pet and hobby perfected!

Endless Fun

Happiness is life—and real happiness is found only in a real home where the happy and united family gather together for mutual enjoyment and recreation. Do you realize how a phonograph will enliven a home, will remake a home?

Such a variety of entertainment! Hear the latest up-to-date song hits of the big cities. Laugh until the tears stream down your face and your sides ache from laughing at the funniest of funny minstrel shows. Hear the grand old church hymns, the majestic choirs sing the famous anthems just as they sing them in the cathedrals of Europe. Hear the pealing organs, the crashing brass bands, the waltzes, the two-steps, the solos, duets and quartettes. You will sit awestricken at the wonderful grand operas as sung by the world's greatest singers. You will be moved by the tender, sweet harmony of quartettes singing those old melodies that you have heard all your life. Take your choice of any kind of entertainment. All will be yours with the Edison in your home. **Send the coupon today.**

THIS PONY FREE

"WHITE SOX"

"WHITE SOX" is a beautiful 3-year-old Shetland, almost solid black, with four white "stockings" and long silky mane and tail. He stands about 42 inches high and weighs around 300 pounds. We have already given away 157 ponies to boys and girls who joined our Pony Club and "White Sox" is just as fine as any of these other 157 beautiful ponies. This is saying a great deal when you consider that we go around to all the big pony farms and pick out the very best ponies we can get for children. "White Sox" is as gentle and lovable as any pet could be and is thoroughly broken to ride and drive. Hitched up in his nobby little pony cart, with his nickel trimmed harness flashing in the sunlight he makes the prettiest picture you ever saw. Not only is he pretty, but he can carry along a whole buggy load of happy children at a fast clip—faster than many big horses can. "White Sox" and his elegant outfit, described in the opposite column, can be yours if you are willing to do us a favor. Send us your name today and we will tell you just how to get him. Don't delay, but do just as our 157 happy pony winners did and send us your name at once.

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY WITH COMPLETE OUTFIT

DO YOU WANT
THIS OUTFIT?

SEND US YOUR NAME TODAY

IF YOU WANT TO OWN "WHITE SOX"

THE OUTFIT

ALONG with "White Sox" we send the finest and most complete Pony Outfit that you ever saw. A stylish four wheeled pony buggy—strong and easy riding—a handsome black, nickel trimmed harness and a hand made saddle and Indian horsehair riding bridle. No matter how rich a child's parents might be they could not buy him a better or more complete outfit than we send with "White Sox" to you or some other boy or girl. The horsehair bridle is made especially for us by an old cowboy at Deer Lodge, Montana, and is hand woven out of many-colored horsehair—red, black, yellow, green and white. It is woven into beautiful Indian designs, mounted with fluffy hair tassels, and the reins end in a real cowboy quirt. You will be the first to have one of these bridles in your neighborhood if you send us your name and get "White Sox" and his whole Outfit. We had just as soon send this wonderful Pony and Outfit to you as to any other boy or girl but you must send your name and address right away so we can tell you all about our easy plan. Use the coupon below, and mail it now.

AS soon as we hear from you we will tell you how to go ahead and get "White Sox" for your own. We have a wonderful Pony Club that gives Shetland Ponies to its members and you can join this club without spending a cent of your own money and thus be eligible to get a pony free. Don't let anybody persuade you that you can't get this beautiful little pony and outfit because our plan of giving away ponies is different from others. The fact that we have already given away 157 ponies to boys and girls in 30 different states, from the state of Vermont to the state of California, several going over 1,800 miles from St. Paul, is proof that we give ponies away. The postmaster or banker in your town knows that the Webb Publishing Company of St. Paul, Minnesota, established for more than 30 years, is one of the largest publishing houses in the United States and can afford to give away ponies to advertise its papers. We never heard of one of the 157 members of our Pony Club to whom we have already given ponies until they wrote and told us they wanted a pony and that is why you must send us your name and address at once if you want us to send you "White Sox" and his dandy Outfit.

WE HAVE GIVEN AWAY 157 PONIES

HERE ARE THE NAMES OF A FEW OF OUR 157 LUCKY PONY WINNERS

"Bob," John B. Corn, Jr., Pulaski Co., Arkansas.
"Sweetheart," Lillias E. T. Howe, Nevada Co., California.
"Pippin," Doris Navarette, Fairfield Co., Connecticut.
"Pal," Julia Federer, Champaign Co., Illinois.
"Heinie," Clarence Niemoeller, Bartholomew Co., Indiana.
"Justin," Norma Thorsen, Palo Alto Co., Iowa.
"Jerry," Cleta Johnson, Douglas Co., Kansas.
"Keno," Vanessa Lykins, Bourbon Co., Kentucky.
"Merry," Isabelle Whitcraft, Baltimore Co., Maryland.
"Clipper," Adelaide J. Stever, Bristol Co., Mass.

"Peter," Charley Mahoney, Chippewa Co., Michigan.
"Star," Clarence Grover, Trail Co., Minnesota.
"Mac," Ruth Mead, Saline Co., Missouri.
"Reggie," Clifford Smith, Yellowstone Co., Montana.
"Bumps," Barton Lewis, Dawes Co., Nebraska.
"Busy," John H. Albrecht, Jr., Camden Co., New Jersey.
"Sultan," Donald M. Robinson, Saratoga Co., New York.
"Silver-Tips," Georgia Lee Barringer, Stanley Co., N. Car.
"Paddy," Grace McGogy, McIntosh Co., N. Dakota.
"Flo," Lloyd Thomas, Allen Co., Ohio.

"Peaches," Alicia M. Davenport, Klamath Co., Oregon.
"Dapple," Ernest L. Heckert, York Co., Pennsylvania.
"Irene," Colgate M. Searle, Kent Co., Rhode Island.
"Cupid," Edna Evans, Moody Co., So. Dakota.
"Lady," Marion Jones, Franklin Co., Tennessee.
"Zip," Ella L. Fullam, Randolph Co., Vermont.
"Lulu," Louise Damron, Benford Co., Virginia.
"Scotty," Catherine Rohrbach, Pacific Co., Washington.
"Princess," Geneva Holt, Nicholas Co., W. Virginia.
"Polly," Alfred Hokenstad, Dane Co., Wisconsin.

NOTICE WE PRINT THE NAMES OF 30 OF OUR 157 LUCKY PONY WINNERS. We would gladly print the whole 157 names if we had room for them here, but we will send them to you just as soon as we hear from you. Possibly some of these happy children live in your county or a county near you and, if so, you probably know them because our Lucky Pony Winners are the best known children in their neighborhoods. However, it doesn't make any difference where you live; if you send us your name and are the lucky child to get "White Sox," he and his whole outfit will be shipped without one cent of cost to you. If you send us your name the day you read this, we will send you 1,000 votes for "White Sox" and also a big surprise that will double your chances of getting a Shetland Pony. We haven't room to explain it here, but we will tell you as soon as we hear from you. Remember, you can't get "White Sox" until you send us your name and become a member of the Pony Club, so sit down and write us at once. Don't miss this grand opportunity!

EVERY CLUB MEMBER GETS A PRIZE.

Every single child who sends us his name and joins our Pony Club will receive a handsome prize of his own choosing. Besides the Pony Outfit (and the Big Surprise we have for you), we will give bicycles, diamond rings, sewing machines, rifles, cameras, gold watches, flashlights and many other wonderful rewards that you never could get until now. Of course, "White Sox" and his dandy Outfit is the best prize of all and you have the same opportunity to get him as any other boy or girl if you send us your name now.

SEND YOUR NAME TODAY.

Our ponies are given away so quickly that you will be more sure of getting this one if you sit right down now and send us the coupon with your name and address or a letter (either way will be alright). The work we require you to do to be a full-fledged Pony Club Member, eligible to get "White Sox," is so easy that any child who could drive a pony can do it. We shall write you promptly just as soon as we hear from you.

ADDRESS ALL LETTERS TO

THE FARMER'S WIFE PONY CLUB
549 WEBB BLDG. ST. PAUL, MINN.

THE FARMER'S WIFE PONY CLUB,
549 Webb Bldg., St. Paul, Minn.:

Please send me pictures of "White Sox" and tell me about your Pony Club and also tell me how to take care of Shetland Ponies. I have no pony and want to belong to the Pony Club and own "White Sox."

Monarch Guaranteed Steel Stump Puller

Best in the World—Send for Proof
It's best in the world, best in construction. Far ahead of all on improvements. Made in our own factory, backed by 20 years' experience.

MONARCH STEEL STUMP PULLER

Guaranteed for 5 Years
Send for copy of this guarantee.

Stump Pulling now easy work
Our new double and triple power machines with latest improvements make stump pulling easy. Clear from 1 to 6 acres per day.

Don't Buy the Ordinary Kind—Investigate the Monarch
Compare the Mighty Monarch with the ordinary stump puller. Test it. Find out about the improvements and equipment we give you. Send for catalog and guarantee, Zimmerman Steel Co., Dept. U-F, Lone Tree, Iowa.

Milne's Stump and Tree Puller

clears a two-acre circle with one sitting—pulls stumps, green trees and hedges quick and easy. You can pull trees faster than you can cut them down, leaving the land clear for cultivation.

All Steel Combination Stump Puller
Unbreakable—handy—rapid—powerful. The only machine on the market that can be set either stump-anchored or self-anchored. Double, Triple and Quadruple Attachments. Also Rotary Power Attachment for sawing, grinding, etc. Write for free catalogue.

MILNE MFG. CO., 835 Ninth St., Monmouth, Ill.

Get My Big FREE BOOK OF Buggy Bargains

BOHON'S BLUE GRASS BUGGIES
FROM FACTORY TO YOU

I am proud of it! It is the best buggy book ever issued. I want you to have it, even if you don't think you will buy a buggy this year. It tells the story—how my buggies are built, how they are tested in ways no "store buggy" can stand, illustrates many finished "jobs" in colors, tells how to select your own choice as to style, color, upholstery, etc.; best of all it proves that when you buy a BOHON "BLUE GRASS" BUGGY, you

SAVE \$25 TO \$50

You see I sell direct from my factory—no dealer, agent or salesman to draw profits or expenses. It's all explained in this book, together with my 30-day free road trial offer, etc. Send for the book—a postal will do, DO IT TODAY.

D. T. BOHON
146 Main St., Harrodsburg, Ky.

The Old Way Was a Good Way

All the grain came out when the straw was beaten with a pitchfork. We have built the same principle into the Red River Special Thresher. The Red River Special beats it out.

Hire a Red River Special And Save Your Thresh Bill

William Marsh, and six other farmers of Langdon, North Dakota, say: "It beats all the grain out of the straw and saves time and thresh bills for the farmer." Insist upon having a Red River Special. Your thresherman will be glad to get this machine if you tell him you want it to do your work. You have the privilege of specifying the machine. It's your grain. Look for a man who owns or will buy a Red River Special—the only thresher that beats out the grain. Write us for "Thresher Facts."

Nichols & Shepard Company
(In continuous business since 1848)
Builders of Threshers, Wind Stackers, Feeders, Steam Engines and Oil-Gas Tractors
Battle Creek, Michigan

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

EVERY MAN has an ambition, and that ambition is to accomplish some certain work. Ambition is not that which impels us to work for food and clothing. Nature does that for us. Hunger makes us work for food—comfort makes us work for clothing and shelter. After these are satisfied then ambition comes along and stirs our souls to do something more. Our ambition, dear readers, is to help make farming more profitable. It is our greatest ambition not only to help along as many individual farmers as we can through the columns of UP-TO-DATE FARMING, with information they can use profitably, but to bring about a new condition of affairs in the business world that will make farming, or agriculture, as a whole, superior to anything it has ever been. We want to see agriculture organized and in control of its own affairs in the world's business. This ambition is not impossible of realization. In a few short years the great work can be accomplished. We believe that the co-operative idea is just beginning to be understood, and as soon as it is understood and the great body of farmers know conditions as they are in the business world, so far as those conditions affect the welfare of the farmer, they will be able to act in co-operation, nation-wide, and will do so. It is our ambition and purpose, therefore, to discover the facts of the great business world which deals with land and the products of land and give them to our readers so they may know and understand, and thus be able to act intelligently and with effect.

First, we want farmers to know what other farmers are doing in the way of raising crops, breeding live stock, increasing fertility of the soil, improving methods and equipment, and finding markets. The best known methods should be made a matter of common knowledge. We are doing what we can to make them so, for not only is every farmer entitled to the best there is in method, for his own and his family's welfare, but the time is at hand when the nation needs all his farm is capable of producing profitably.

Second, although farming has long been considered an independent avocation, it is far from being so today, and becomes less so each year. Farming, or rather successful and profitable farming, depends as much or more on other things than it does on the farm and the farmer. Legislation has something to do with it. Banking has something to do with it. Railroads and transportation have much to do with it. Big Business, such as manufacturing machinery, fertilizer, and the raw materials of the farms for consumption, has much to do with it. Marketing, which includes the whole gamut of local buyers, commission men, brokers, wholesalers and retailers, has a very great deal to do with it. Farming, in its present disorganized condition, is anything but independent. It should be—must be—made independent before it can be as profitable as it should be. But it can not be made so until the farmers know just how to relieve it of its dependence on these many outside influences, and this in turn can not be possible unless farmers as a class know what these other interests are doing and how they are doing it. Realizing the great necessity of this kind of education, UP-TO-DATE FARMING is engaged in teaching its readers the facts of their dependence, under present conditions, upon others.

Third, with full faith in the ability of the farmers once in possession of the facts to so manage their affairs, both individually and collectively that they can organize their great industry on a basis which will give them the greatest possible degree of independence and making farming wonderfully prosperous, and give them an honored and enviable position in the affairs of civilization, we try to point out the paths of agricultural endeavor that will lead us up to this higher plane. They way appears plain, and when all have seen it it will be made easy.

So we have undertaken to teach facts as we find them; what the state and national departments of agriculture are doing; what the lawmakers have done and are about to do, and how their action will affect farmers; what is done with the products received from farmers; and last, and most important of all, build up an organization so that farmers can act both intelligently and effectively in the co-operative control of the great business of agriculture, both locally and nationally.

Our ambition is to see agriculture become the most influential, as well as the most important business in the world. It is a great undertaking and we sincerely believe it to be a worthy ambition.

What Should be Done With Them?

Men who set forth to do something out of the regular order of things have always had to contend with the professional croaker—the pessimist whose faith in anything is so small it could travel a thousand years in the shell of a mustard seed without reaching the center. They are avowed enemies of progress. A man goes forth with a spade to plant an apple tree, with hope in his heart. He chooses a spot and begins to dig when the croaker comes along, stops, lengthens his face and loosens his tongue. "You can't plant a tree there," he says. "The ground is too hard. If you do plant it it won't grow; if it does grow it won't bear fruit; if it should have fruit it won't be marketable in size or color; if it should be marketable you can't get anything for it; if you should eat it yourself it will give you the stomach ache." Ye gods! Would it not be justifiable homicide to plant the pessimist along with the tree?

Balanced Rations

'Tis the coward who quits at misfortune,
'Tis the knave who changes each day,
'Tis the fool who wins half the battle
And then throws his chances away.
The time to succeed is when others,
Discouraged, show traces of tire.
The battle is fought on the home stretch,
And won twixt the flag and the wire.

It is the fulfillment, not the promise,
that counts.

There never was an over-production
of kindness.

The middlemen are now right in the
center of things.

The measure of a farmer's ability
is found in the margin of his profits.

The man who makes his head save
his heels keeps both in good condition.

Quality crops are the kind to grow,
provided you can grow a quantity of them.

There's a new disease amongst potatoes
called "black heart." It's an old disease among men.

Sam Saxon says about the most disastrous
poultry disease he knows about
is chicken fever in a man.

As a rule, the man who thinks he
is "some pumpkins" is partly right.
He is at least mostly punk.

The oil well faker with the lubricated
tongue is a pretty smooth gent
who should be let well alone.

How the youngsters do enjoy the
Cadet's columns. They are making
things lively in their department.

A fellow wants to be mighty sure
he will not want to come back before
he burns his bridges behind him.

There are some things about poultry
we didn't tell in our Poultry Number.
Never mind—you'll get them all later.

Nearly every fellow who picks up a
pen and starts in to write an article
on farming begins by saying "Your
farm is a factory."

Over 64,000 farmers in Michigan
have long distance telephone connections
in their homes. Farmers are not
so much behind times, after all.

When a man has trouble with his
gasoline engine he blames the machine
when ten to one the source of the
trouble is mostly in his own head.

If your boy is hankering for a course
at the agricultural college, tell him
about the article on page 7. It may
give him hope and encouragement.

Sam Saxon says the farmer who is
slowest to believe what he reads in a
farm paper is quickest to bite at some
fool proposition of a slick-tongued fakir.

Three years ago we were about the
only people in the country preaching
co-operation. Now everybody's doing
it, and they'll all be teaching controlled
marketing soon. Verily, the world do
move.

The up-lift movement is contagious.
The tenant wants to raise the rent.
The farmer plans to raise a crop. The
railroads are trying to raise their rates.
Union labor is out to raise wages. Even
the wicked sinner is for the up-lift—he
goes out to raise the d—l. Onward
and upward ho!

UP-TO-DATE FARMING TEACHINGS VERIFIED

"The high cost paid by consumers * * indicates there is plenty of room for lowering costs of farm products to consumers and at the same time largely increasing the cash income per farm without increasing production. * * However desirable increased production may be from the consumers' standpoint, it does not follow that such increase would result in increased income per farm, or that prices paid by consumers would be lower. * * This condition is undoubtedly a marketing problem which will have to be solved by improved methods of marketing through better organization of farmers."—From the official report of Secretary Houston, U. S. Department of Agriculture. See editorial below.

Real Conditions and Actual Needs

The Facts Have Been Forced to the Top

WHAT we are going to print below is nothing new to readers of UP-TO-DATE FARMING. For many years we have told the public that increased production, however desirable, is no remedy for the "high cost of living," nor does the prosperity of the farmers or of the country depend upon that. Our argument was that the farmers already produced a surplus, and the greater the surplus the less it was worth to those whose labor produced it, and that it added nothing to the supply for those who needed it. This argument seemed so different from what the world had previously understood that it was ignored in official life, and the schools and the press continued to teach and urge greater production as the one thing for the farmers to learn and to do. Former Secretary Wilson's figures, in spite of the hands through which they passed, showed different, but the idea was so startling and so apparently absurd that the facts were ignored and agricultural "extension" trains gave forth their supposedly awakening sounds throughout the

country and scheme after scheme, backed by millions of money, was inaugurated to induce heavier yields.

No remedy came. The farmers worked, crops grew, surpluses were marketed and valuable products went to waste or were destroyed. Over the wasting piles of what the farmers could not sell they had to accept meager prices for what was taken, and the consumers were compelled to pay exorbitant prices for what they used. We kept up our fight. The people read and wondered and by and by believed. But not so the press and the schools. And not so the politicians who were seeking place and power. They feared the ruling forces, and dared not condemn what seemed to be popular in high places, nor to admit facts that powerful influences did not desire should be made known.

But ours is a government of the people, and truths that affect all can not always be hidden. If persistently, faithfully and honestly brought out they will be seen. The light will shine in spite of the clouds that may for a

(Continued on Page 5)

What Others Say and What We Think of It

"The maple sugar camp is not what it used to be."—The Country Gentleman. Well, neither is the maple sugar.

"It is foolish for any man to prophesy higher prices for fat cattle."—Farm and Fireside. It will always be foolish to prophesy prices on any kind of farm products as long as the present market system prevails.

"A liberal dose of ordinary old-fashioned honesty in the business world, that led men to sell things for exactly what they were, will clear up the commercial atmosphere."—The Breeders' Gazette. That's another product the demand for which is somewhat greater than the supply.

"City boys will figure in the future development of agriculture."—Isaac Coleman (a city-bred farmer). Ike, a lot of our farmers think some of the "city boys" are doing too much of the "figuring" in the present developments in agriculture for the good of the business. How about it?

"I have been interested in the great problem of dining from early youth."—Doctor Harvey W. Wiley. You've got nothing on us at that, Doc. The first thing we did after our arrival in this world was to hunt up a free lunch counter, and we didn't stop to notice whether the food supply was guaranteed under the pure-food laws or not.

"The United States Government spent four hundred and forty million dollars last year on the War, the Navy and the Pension Departments; it spent only about twenty millions in the interest of agriculture. Such a policy is shortsighted and unjust, neglecting as it does the nation's greatest material asset and the ultimate source of business vigor and public welfare."—The Atlanta Journal. AMEN!

"In a newly established home which is filled with love and installment furniture the cook stove is used for the first few years as a domestic science experiment station. As nearly all cook stoves are made of sheet iron, they do not feel these experiments nearly so much as the rest of the family."—Kimball's Dairy Farmer. In a home like this the top shelf in the kitchen safe should be reserved for a row of patent medicine bottles.

"The truth is there are both advantages and disadvantages in every farming region. If a man is going to move let him first investigate the difficulties of the new country, as compared with his own. When he has done that thoroughly, he frequently won't move."—Oklahoma Farmer Stockman. Anyhow, he won't move frequently. The moving bug, whose bite causes emigration fever has caused as much loss as the cattle tick or the chinch-bug.

"We must look on the cheerful side of things. When winter comes we must look forward to spring. In spring we must look forward to summer. In summer we must anticipate the joys of autumn."—Green's Fruit Grower. We do that, Brother Green, all of us, all the time. We always wish in winter for the summer, and when July's hot sun draws the perspiration from every pore, we are keen for January. But is that looking on the bright side of things?

Let's Take the Bull By the Horns

Why all this hesitation
And long deliberation?
Why stand in contemplation
When Duty points the way?
When there's work to do go do it.
Take right hold and wade right through it.
Our duty's plain, so let's go to it
Without any more delay.

IF THERE is one thing that stands out clear and strong, acknowledged by all thinking men, it is the fact that the present and future welfare of the farmer depends to a very great degree upon the organization of a co-operative marketing system. A few years ago, when UP-TO-DATE FARMING, as a voice crying in the wilderness, pointed out this great problem, and the way to its successful solution, not many men believed it. Not because they disbelieved it on well-defined grounds, but because they had not given it thought, or become acquainted with the inside facts. Today all the foremost students of agricultural conditions, all farmers who have given careful thought to it, are agreed that the one thing most needed is a reformed marketing system, and that such a system can only be built and successfully operated through the organization of farmers.

There may be, doubtless are many farmers, who do not acquiesce in this view. Some think such an organization is impossible. Some are discouraged by the failure of some organizations to make co-operative effort profitable. These opinions and beliefs are unnecessary impediments in the way of true progress.

In the past these obstructionist views were encouraged by the leaders of thought and action, for the leaders themselves held them to be sound and true. But now they see differently, as is evidenced by a few selections, taken at random from several sources. They show how definitely all thinking minds must come to the same conclusion. Read them:

Words of Francis E. McGovern, Governor of Wisconsin:

Better farming, better business, better living, but the greatest of these is better business. It is indeed the key to the other two. We can not have better living on the farm without increased prosperity that will come with the employment of more modern business methods and we can not hope better farming will continue long unless it is made to pay. Present waste in the distributive processes must be eliminated. A more direct line must connect the producer and consumer. All this means a reorganization of the distributive process as it is now conducted.

Dr. T. N. Carver, political economist of wide repute, and chief of the Bureau of Rural Organization in the Department of Agriculture, in a recent interview declared:

The first great problem is intelligent organization. Mere organization for organization's sake amounts to nothing. On the other hand, intelligent organization has done wonders in many industries.

Dr. Clarence J. Owens, managing director of the Southern Commercial Congress, and a man of unusual business judgment, acumen, and foresight says:

The movement in which we are engaged seeks added strength for our farmers. There have come changes in the organization of civilization today which our farmers have not adopted. Among capitalists it is called combination, among laborers unionism. For the farmers we speak of it as co-operation. But the farmers have not yet learned this lesson. Obviously our democracy can not maintain that balance essential to its existence if our rural forces continue in this state of disorganization as opposed to the astounding organization of the forces of capital and labor. It is essential first to better the financial standing of our farmers and increase their production through the influence of better prices. We must increase the control of the producers over the marketing of their products, strengthen the position of the farmers as buyers and weld force. Whether you see it or not now, this problem is of direct and vital importance to you—to every American.

Frank Blackford, Ohio State Farmer's Institute lecturer, said on January 2, at the Geneva, O., Institute:

Nowadays the farmer is obliged to sell at the middleman's price. Farmers should co-operate with each other; some one should be selected to care for the sale of all produce. Instead of all growers of crops taking

their produce to the cities every morning, for instance, why not one farmer see to the sale of the produce. The farmer must set his prices like the automobile dealer does. With co-operation the farmer would do this.

A prominent Oregon Granger's view:

I am assured that the farmers of Douglas County are ready to stand shoulder to shoulder with every other organization, co-operative or otherwise, in supporting any plan that will equitably solve the problem of marketing our farm products. This problem must be solved by our joint efforts, or not at all.—C. E. Blanchard in the Portland Oregonian.

Richard Dalton of Hannibal, Missouri, president of the Missouri State Board of Agriculture, said:

Individually the members of the board are back of the co-operative selling idea. It means dollars in the pocket of every Missouri fruit grower to realize the value of united effort in selling, for it gives the small grower the benefit of prices obtained by co-operation and also gives him the benefit of better freight rates.

From the Jackson (Miss.) News:

Not until there are more adequate and efficient methods of distribution with more economical means of exchange will the producer or the consumer enjoy the full benefit of abundant harvests. The pith of the problem lies in the marketing. Every city should have its central market, and every rural community some co-operative plan for reaching them.

What our present Secretary of Agriculture thinks along this line is plainly set forth in the cartoon in this issue and in extracts taken from the Annual Report of the Department of Agriculture, recently sent to Congress commented on elsewhere.

The path of progress to future success is plain. Our duty is clear. The way is open, and opportunity calls. But it tries the patience of the few workers in the field to hear so much talk, and see so little action on the part of others. Why stand idle, with hands in pockets, wagging tongues when there is wood to cut, and an axe leaning against the chopping block?

The thing to be done is to settle upon a plan for the rapid organization of every locality, so the crops from that locality may be properly graded, and shipped at the right time to the right place. To obtain the degree of co-operation necessary to properly distribute the products requires that all these local points be organized into a system. The work immediately before all who admit the need of organized co-operation amongst farmers, is to have men of ability in every community to form local organizations and make them parts of the great co-operative system.

We maintain that if all those who are now teaching the necessity of co-operation would unite in this work of building the actual machinery for co-operative work, lending their aid and influence, it could be accomplished quickly. Give the farmers a basic organization in which they can believe as fully as they believe in their government, and they will not hesitate to unite with it, and stick to it. We need no new organization of national character. We only need the adoption, by all organizations, of a federation for co-operative marketing, in which all members of local and general organizations can co-operate in the government and management of a national marketing system, as the citizens of each state in the United States take part in the maintenance of the national government.

This paper has reason to believe the plan we teach is correct, and that there is no reason why this plan should not be adopted, and the marketing reform built thereon. We believe fully that if all advocates of organized agriculture would lend their active support to this plan, and work together to complete it, the entire rural population

would follow their lead. Think what it would mean if all farm papers, all agricultural leaders were to act unitedly in promoting one great federation of this kind.

There's too much talk about co-operation in proportion to what is being done. Let those who talk co-operation do some of it. Let them get together, and work together along the same lines to the same end. Is not this what co-operation means? Gentlemen, there are enough of us to take the bull by the horns. Then why continue to bandy words?

It may be well to state here that UP-TO-DATE FARMING wants to hear from every farmer or other person who

wants to see such a system established. We want to hear from men who have the ability and willingness to aid in the organizing of rural communities. We want to hear from local marketing associations who feel the need of greater control of their products through a national system of distribution. For ten years we have been helping to build such a system. Organized associations, large and small, from coast to coast and from Canada to the gulf, are now in successful operation, and are prima facie evidence of the faith and works of the publishers and subscribers of this paper. We are willing to work with every one who will take an active, constructive part in the task before us.

The Enormity of It

SECRETARY HOUSTON, with the aid of his army of "experts," reports that the total value of the farm products of the United States, all products, including live stock, for 1913 were worth, at the prices paid, ten billion dollars. We are glad for farmers to be successful, and for their labor to be rewarded. This is the greatest report of values ever made for a year's farm production. Yet the production itself was by no means the largest. In almost all parts of the country the yield was reduced, and in many places important crops were nearly a failure. The live stock supply was decidedly small, and so was that great staple, corn. Nor were prices paid the farmers much larger than usual, and in many good farming regions, ordinarily successful farmers, instead of having a surplus, are actually short on home supplies. And yet the production is estimated at Washington to be worth ten billion dollars!

It is not our purpose to dispute the figures, but we wish our readers, especially the farmers, to understand what it means. There is not a billion of seconds in thirty years. If the estimate of the Department of Agriculture is correct, the farm crops of the United States during the year 1913 were worth more dollars than there are seconds in three hundred years! It is easy to write a million and it is just about as easy to write a billion, but when it comes to counting it is a very different

matter. No man, beginning at the usual age of work time and working the usual hours of the laborer, could count a billion dollars in single pieces during a lifetime.

The Department says about half of that ten billion dollars worth of products was surplus, and was, therefore, to be sold by the farmers. That would give the farmers a cash income for that year's work of five billion dollars, or as many dollars as there are seconds in one hundred and fifty years! The census shows there are six million farms in the United States. That estimate would make the average value of the products of each farm for that year \$1,666, and the cash income of each farm, the value of the surplus production, \$833. We shall not ask each farmer if he got his \$833 above the products he used himself, but we would like to ask those who are so determined that there must be a farm mortgage or bond loan system to enable the farmers to borrow money on their homes, if such a system is really needed? A class of people, those of a single vocation, that can CREATE in a year more money value than there is of money in all the world, ought to be able to get along without giving their homes into the control of the money lenders, the money power, the purpose of whose business is to absorb the values of the world, including the homes of the people. We want our readers to understand the selfish hypocrisy of these pretended friends.

Destroying the Surplus

THOSE in high official circles are beginning to admit that under the present marketing system surplus production adds but little to the abundance of the supply and does not reduce the price charged the consumers. Secretary Houston of the Department of Agriculture recently had a conversation with a number of congressmen on this subject and it is reported that Representative Taylor of New York said it was a common practice of the city dealers to throw overboard boat loads of fish so they could keep up the high prices because of an apparent scarcity. Mr. Houston is reported to have said he had heard of corn and cotton being burned for the same purpose. We have information that it is a common practice to send car load after car load of bananas and other southern fruits that had been shipped to the St. Louis market out from that city and dump them in the nearby rivers, not because nobody needed them in the city, but because adding them to the supply would compel the reduction of the retail price. Humanity would suggest that if they were worth nothing on the market a free distribution among the poor would be better than to destroy them, but the present market control does not listen to the voice of humanity.

It is a well-known fact, especially in the centers of production, that the market control not only dictates the prices to both producers and consumers, but that it limits the quantity to be purchased, and, no matter what the commodity, when enough has been received to supply the demand at the high prices, the market is practically closed and the remainder goes to waste in the fields, orchards or gardens, or, if already shipped, it is destroyed at the market centers. Thus go to waste every year in this country great quantities of fruits, vegetables and even the more substantial products.

We are glad the country's official life is beginning to discuss this feature of present marketing and distribution, for such discussion will inevitably arouse public indignation to the extent of compelling a remedy. It will also convince those who are so constantly urging increased production that there is something to add to their work if the world be at all benefited thereby.

We have only this additional remark to make: If those in authority, those having power to act in the interest of the whole people, know these things and fail to take effective action to prevent them, they are unworthy the positions they occupy and the powers the public has conferred upon them.

The Sterilized Milk Problem

SMART MEN must be constantly doing something—something that other people have not done. The world would not know they were smart if they didn't. For years now there has been much worry about the use of sterilized milk. Mothers were taught that it was dangerous to feed their children anything but sterilized milk. Those who could not get it were compelled to feed their babies on ordinary milk as it came from the cow, but they did so in constant fear that they were endangering the health or even the lives of their children. Those who could get it paid high prices for it, thus trenching upon their resources and spending money they seriously needed for other things. But at that cost some new industries were built up, sterilizing and bottling milk, which has become quite a business.

But there are other smart men. Robert Mond, a scientific chemist, now declares that sterilized milk is dangerous food for children, and Sir Almroth Wright says the same thing. These men, including Dr. Koch, argue that sterilizing the milk destroys its natural nutritive qualities so that it fails to nourish the infants to whom it is fed, and thus leaves them in a weakened condition and subject to the usual human ailments without the power to resist the attacks. This is at least encouraging to those who have had to bring up their children in the old-time way!

All this reminds us of the present rage for "expert" teaching. Farmers must be taught how to farm. Millions of money must be drawn from the people to pay these "expert" teachers to thread the country roads in their automobiles, as some one suggests, to tell the farmers what fools they have been all these years, and show them how they must do to make this field and that one do its best. All this must be done in spite of the fact that, as Secretary Houston himself says, the farmers of this country are producing enormous surpluses for export to foreign countries. They are now producing more than is needed, but we are told they are not doing it in the right way, and an army of "experts" need jobs. Taking a more serious view of it, how many of them would teach the same methods, and how many would teach next year as they taught this? And how long would it be until the theories of the "experts" would be found to be entirely wrong, as in the case of the sterilized milk?

And there are wise men in other nooks and corners of Uncle Sam's farm. They have discovered that the farmers must borrow money to help them in their business, and they must get it from some source different from the ordinary. It is not enough that the present opportunities for borrowing are open to the farmers as well as to others, and that there never yet has been a time when a farmer could not get money to meet actual needs. There must be a "string" of banks arranged for his special benefit that must have tied to it a "string" that will be at the other end attached to the farmers' homes. The dullest farmer, or patriot, of any calling, ought to see that that "string" is the chief attraction of the wise men who have discovered the great need of a special rural credit system. The farmers are the only creators of wealth in the world and last year, the worst crop year of many, they created greater value than all the money of the world would buy. But that offered no opportunity for the money power to get a hold on the farms, and a better way than the present has been discovered. How do we know it is a better way? A commission has been sent over to Europe to learn how it is done there. But we fought the great war of independence to win the right to do things different from the way they do them in Europe, and since then we have become a great

nation. We are doing very well, aren't we? Raising more than our people need, and sending millions to the hungry of other lands. When farmers need money they can get it, or will be able to do so when they learn to properly dispose of the great wealth they create. The children that are fed on the fresh milk as it comes from the cow grow and are strong, as they have been for hundreds of years, and their parents are not worrying about the sterilized commodity. Let onward and upward be the words of progress, but the farmers will possibly do just as well if these peculiar "experts" go a little slow.

The Farmer Who Thinks

THERE'S an old saying we've all made use of many times, and we may have believed we were voicing a great truth when we said it. Yet, fact is, we were putting our O. K. on one of the greatest falsehoods—the most damaging delusions of this or any other age. We refer to the saying "You can't teach an old dog new tricks." When ever we want to excuse ourselves, or explain some failure of our own or of others to do duties they are neglecting, or to take advantage of opportunities ahead. When we get to running in a rut and are advised to get out, change our way of doing things, become up-to-date and adopt new, improved methods, we say "Oh, what's the use? We've lived so far, and the old way is good enough. Besides, 'you can't teach an old dog new tricks'." The thing is neither literally or figuratively true. Old dogs, and common cur dogs at that, do often learn new tricks. Every man who knows much about dogs knows the truth of this. It is perhaps impossible to break some old dogs of old tricks, which is altogether a different proposition. And in some respects, men and dogs are something alike. It is not the old way of doing things that is a habit with us—it is the old way of thinking. What we need most is to get out of the mental ruts we've let our minds travel year after year, and begin to think deeper, reason more, and get a broader grasp on the affairs of the world as they effect us as individuals. We've been in the habit of setting down any new idea as some scheme or pipe dream, without taking the trouble to dig deep down into the details and see whether or not the idea is good or bad. That is a habit we must break. It's a rut we must abandon. Thinking is a new trick we must learn, not only learn to think but to think deep, and reach right conclusions.

Take your own neighborhood as an example. The farmers who are having the least success are those who don't try to learn anything from the work or experience of others. The progressive, up-to-date, money-making farmer is the thinking farmer, and he thinks because he reads the best books and papers, and they give him something worth while to think about. The man who reads is made to think. A brain that cannot get a good idea from a book or a paper, and then turn it to

good account is of little use to the head that holds it. Any man, with a spark of life or ambition in his brain cells, who reads a good book or a paper on farming will know more, and do better work than if he neglects reading. Buy a few good books on the kind of farming you are engaged in. Take a few good papers that will give you an idea of what others are doing. Read them thoughtfully, and after reading a chapter in the book, or an article in the paper, sit and study over what you've read, and try to see if there is not some way in which you can improve your own farm, or ways of farming along the lines you have been reading. Teach yourself the trick of thinking. The best way to do that is to read. If you read this paper each issue we will guarantee that you will have much to think upon, and if you act upon your thoughts you will find greater pleasure and profit in farming. Don't take our word for it—try it.

REAL CONDITIONS AND ACTUAL NEEDS

(Continued from Page 3)

time roll between us and the sun. Our words have caught the public ear, have engaged the public thought and have made their way to Washington. As a vindication we are glad to quote from Secretary Houston. Our readers must realize that it is very similar to quoting editorials that appeared in this paper years ago, and that makes us all the more ready to quote them now. In his recent report Secretary Houston said:

However desirable increased production on farms may appear to be from the consumers' standpoint, it does not follow that such increased production would result in any increase in the cash income per farm or per capita of farm population, or that prices paid by consumers would be any lower.

Had the total production in 1913 equaled or exceeded the 1912 production, it seems probable that the cash income per farm would not have been greater and might have been less than in 1912, but it is extremely doubtful whether the cost to the consumer would have been any less, because retail prices are promptly raised on a prospect of underproduction, but are very slow to decline if there is overproduction.

The long line of distributors and middlemen between the farmer and the consumer are in a position to take advantage of the market and to a certain extent control the market in both directions, because they are better organized to keep informed of crop and market conditions and to act promptly than either farmers or consumers, who are not organized and as individuals are helpless.

The high prices paid by consumers, ranging from 5 to nearly 50 per cent in some cases more than the farmer receives, indicate that there is plenty of room for lowering the cost of farm products to consumers and at the same time largely increasing the cash income per farm without increasing farm production.

This condition is undoubtedly a marketing problem which will have to be solved by better organization of farmers and improved methods of marketing.

When, as the result of such organization and improved methods, the price of farm products can be maintained at a higher level without increasing the cost to consumers, farmers will be justified in increasing the output of their farms with a fair prospect of realizing reasonable profit on their investment of time, labor and money, which in the aggregate is enormous.

"The report brings out," says a leading city daily paper, "that while this (last) year's crop was smaller than

that of 1912, its cash value broke all records with a total of nearly ten billion dollars."

"However," continues the daily, "Leon M. Estabrook, chief of the Bureau of Statistics of the Department of Agriculture and chairman of the Department's crop reporting board, says the greater part of the huge sum has gone into the pockets of the middlemen, who stand between the farmer and the consumer and levy tribute from both.

"Conditions as shown in the official crop review are astounding," declares the astonished public press. "Droughts and other factors reducing production bring farmers a greater cash return, thus putting a premium on a short supply. This fosters a rising market for the middleman."

Farmers, will you believe it now? Will you heed what Secretary Houston, at the head of the farm department of the government, says? "This condition is undoubtedly a marketing problem which will have to be solved by better organization of farmers and improved methods of marketing."

Lawmakers, will you heed the warning? Whom serve ye, the managers of the market, the speculators in farm products, because of the power they are supposed to have at the polls, or the people who really cast the ballots?

Smile Awhile

In Bondage

Willie—Pa, what is a slave to fashion.
Pa—It's a man that has women in his family.

Thought That Ought to Do

"Frankie, I don't believe you have washed your face and hands this morning."
"No, ma, but I've dusted them with the clothes brush."

The Way It Used to Be

Sip—The mothers' club is making a great hit these times.
Nip—The mother's slipper made the greatest hit in my time.

Felt Small

Mother—I am perfectly shocked, Willie, to think that you stole a penny. That makes you a thief, Willie, for it is as much a crime to steal a penny as a dollar. How do you feel about it, Willie?
Willie—I feel awful little, mother, for there was a dollar right where I got the penny!

Literal if Not Scientific

Teacher—"Mary milks the cow." Parse cow.
Pupil—Cow is a noun, feminine gender, singular number, third person, and stands for Mary.
Teacher—No, cow don't stand for Mary.
Pupil—Then I'd like to know how Mary milks her.

It Satisfied Him

Anxious Lover—I want to marry your daughter, sir.
Anxious Father—What! Are you able to support her?
Lover—Yes, sir, and I'm able to help her father if he should get in a tight place.
Father—She's yours, my son.

Only an Enlargement

Doting Mother—Here is my son's picture when he was a baby. I want a picture of him now that he's a man.
Photographer—Where is your son? I can't make it unless he is here.
Doting Mother—Why, I thought you could make it from this. I've heard of enlarging pictures.

Editor and Office Boy

Office Boy—The editor is sorry he can not print your story, but he thanks you for sending it in.
Fair Writer—Oh, how nice! Did he really say that?
Office Boy—Excuse me, but what he really said was, "Here, Jim, take this stuff away; it makes me sick!"

A Practical Fact

The teacher had been talking to the class about animals, and had particularly described the groundhog. "Now, boys," she asked, "who can tell me what a groundhog is?" Up went a hand. "Well, Carl, you may tell us," said the teacher. "It is sausage," said Carl seriously, but confidently.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

BRADSTREET'S summary of the state of trade on January 17, 1914, follows:

Improvement both in sentiment and demand. Industrial resurrections numerous following holiday shutdowns. Broader demand for iron and steel, cottons, woolen goods and raw wool. Retail trade lags, except North and East, where cold wave benefitted. Collections slightly better. Banks seek commercial paper. Wheat exports large. Argentine corn exports have an effect. Decreased clearings. Increased failures.

The chief activity of the Department of Agriculture continues to be, to impress us with the greatness of agriculture and the tremendousness of our crops. For instance, a report now in preparation estimates that there are 1,140,000,000 acres of tillable land in the United States, only 27 per cent of which is now under cultivation.

So here is the situation. This country, with tillable soil enough to support many times its present population, if made only as productive as some European countries, is importing wheat and corn and oats and eggs and butter and poultry and meat and potatoes, etc., from Europe, Asia, Canada, Argentina, Australia and other countries to help feed our population of 100,000,000 people. Germany, with a population of three-fourths as much as ours, and an area about the size of one of our states, Texas, is practically self-supporting, and of some crops exports large quantities.

Our old trouble was immense surpluses to export which kept prices down. Our present trouble is the free competition of countries that have cheap land and cheap labor and can produce cheaper than we can in this country, just at the time when we were getting to a point where the production could be nicely controlled for profitable prices. There never was a time when

and 292,737,000 bushels in 1911. Comparing the values of the crops the government says the 1914 crop was worth \$227,903,000; 1912, \$212,550,000, and 1911, the small crop, \$233,778,000. Prices of potatoes have fluctuated quite widely in the last two weeks. At this writing there is a better tone to the market. If the embargo against foreign potatoes is maintained we look for higher prices. Warm spells of weather will influence liberal shipments with temporary declines in prices. Southern sweet potatoes have not had the active demand that was anticipated and such as the short crops of food stuffs over the country would appear to warrant.

Advice

Wheat—Prices ought to be better before the next crop comes. Much depends on the prospect for the new crop as the season advances. Every condition is a bear element now. Any material damage to the growing crop will set prices up. If present conditions are maintained prices will very likely be lower. Wheat is too low and it ought to be held, or fed to stock. **Corn**—A great deal of corn has come in from Argentina and corn prices were badly broken. So far the shipments are from the old crop. That country will harvest a new crop next March and April and the worst may yet be to come. Considering everything we believe it wise to market some now and hold some for marketing next summer after the rush from Argentina is over. The crop of Argentina cannot be expected to be more than about 200,000,000 bushels while the shortage in our country from recent average crops is about 200,000,000 bushels. **Oats**—They are worth more money and ought to be held off the market. **Cotton**—We advise holding. **Beans**—Will probably be higher. **Potatoes**—Market gradually.

The National Clearing House of the Farmers Society of Equity and federated associations, Indianapolis, will at all times give marketing instructions by mail or wire.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on January 10, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease, X means increase.)

	Jan. 10, 1914	Change from two weeks before
Bushels	Bushels	Bushels
WHEAT	71,820,000	X 732,000
CORN	16,773,000	X 6,820,000
OATS	31,616,000	— 799,000
BARLEY	8,008,000	— 454,000

The visible supply of wheat in Canada on the same date was 57,417,000 bushels. This is 1,782,000 bushels more than two weeks before and 8,612,000 bushels more than a year before. The visible supply of oats was 17,852,000 bushels on the same date, which is 463,000 bushels less than two weeks before and is 9,499,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Jan. 21, 1914, two weeks before, and a year before as follows:

	WHEAT, No. 2 RED	Two weeks before	A year before
Chicago	96 @ 96½	96 @ 96½	1.12 @ 1.15
St. Louis	95 @ 96½	97 @ 97½	1.09 @ 1.14
Kansas City	90 @ 91½	91 @ 92½	87½ @ 96
Cincinnati	90 @ 91½	91 @ 92½	1.12 @ 1.14
New York	1.01½	99½ @ 1.01	1.09 @ 1.10
Minneapolis—Spring wheat—No. 1 hard	89½c	No. 1 hard, 89½c	No. 1 northern, 86½c @ 87c
Two weeks before	88½c @ 89c	and 86½c @ 87c respectively	A year before, 88½c and 87½c @ 88c respectively
	CORN, No. 2 WHITE		
Chicago	64½ @ 65½	62	49½ @ 50
St. Louis	69½	72 @ 72½	49
Kansas City	67½	68½ @ 69	49½ @ 50
Cincinnati	67½ @ 70	65½ @ 66½	54 @ 55
New York	70	71½	56½
	OATS, No. 2 WHITE		
Chicago	40 @ 41½	38½ @ 39	34 @ 35½
St. Louis	41 @ 41½	40 @ 40½	33½ @ 34
Kansas City	39	40½	34½ @ 35
Cincinnati			37 @ 37½
New York			38½ @ 39

Future Grain Prices

Chicago grain futures closed on January 21, 1914, and two weeks before as follows:
Wheat—May, 92c; July, 87½c. Two weeks before, 91½c and 87½c respectively.
Corn—May, 65½c; July, 65½c. Two weeks before, 68c and 67½c respectively.
Oats—May, 39½c; July, 39½c. Two weeks before, 40½c and 39c respectively.
Winnipeg, Can.—Wheat, May, 90½c; July, 91½c.

Cotton

New York, January 22.—Cash cotton closed: Middling upland, 13.00c; middling gulf, 13.25c. The price is 60c a cwt. higher than two weeks before and 10c a cwt. higher than a year before.

MOVEMENT OF COTTON—BALES

	Ending Jan. 16, 1914	Ending Jan. 9, 1914	Ending a year before
For the season...	4,589,525	4,598,090	4,394,664
For the week...	385,378	394,034	248,333

VISIBLE SUPPLY

	4,589,525	4,598,090	4,394,664
American	4,589,525	4,598,090	4,394,664
World's	5,983,525	6,030,090	5,984,664

The American visible increased 16,002 bales in two weeks, while the world's visible decreased 40,998 bales in the same period.

Chicago Produce Market

January 21, 1914.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets and instructions for marketing address the Farmers' Society of Equity, Department of Marketing, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, following:			
Monday	60	50	112
Tuesday	62	30	48
Wednesday	45	28	40

Total, 3 days..... 167 108 200
A further loss of 2c a bushel was made in prices today, and bulk of the business done was within a range of from 60c to 65c for good, sound stock. Trade was slow, and receipts of 45 cars did not find complete clearance.

Sales reported were: Per bushel—Wisconsin, in bulk —2 cars at 60c, 2 cars at 61c, 2 cars at 62c, 1 car at 63c, 3 cars Dusties at 65c. Sacked—2 cars Rurals at 64c, 1 car fancy Dusties at 67c.
Per bushel, bulk or sacked, Wisconsin, Triumphs, Burbanks and Kings.....\$ 56 @ 60
Round white..... 60 @ 65
Dusty Rurals, fancy..... 65 @ 67
Michigan, round white..... 60 @ 65
Idaho, Pearls..... 85 @ 90
Oregon, Pearls..... 85 @ 90

NEW POTATOES—Quiet and steady at former prices. Barrels, Bermuda, reds, No. 1.....\$6.25 @ 6.50
No. 2..... 5.25 @ 5.50
Hampers, Louisiana, white, said to be new.....@1.25
Wisconsin, Minnesota and Michigan potatoes are 5c to 8c a bushel lower than two weeks before. Idaho and Oregon are quoted the same as two weeks before. Bermuda new potatoes are 25c to 75c a bushel lower than two weeks before. Southern hampers are 75c lower than two weeks before. The price of old potatoes was about 10c a bushel lower a year before.

SWEET POTATOES—Market quiet. Demand is very tame and supply good. Illinois, both in barrels and hampers, are dull. The stock does not run so uniform as the Eastern. Retailers do not care for stock when, after selling a few good from the top, they have a lot of common left. Consumers have to be reckoned with. They want only nice goods.

Barrels, Illinois, depending on quality.....\$2.00 @ 2.50
Hampers, Delaware..... 75 @ 1.00
Jersey..... 90 @ 1.00
Illinois..... 50 @ 60

The price per barrel, Illinois, is from unchanged to 50c a barrel lower than two weeks before. Eastern hampers are 10c lower. Jersey hampers are 10c lower. St. Louis quotes Alabama short hampers at 59c, which is considerable lower than two weeks before. Kansas City quotes southern hampers at 90c, which is about the same price as two weeks before in that market.

BEANS—No changes were quoted. Nothing important to the market. Beans are reported firmly held in the country. Receipts are very moderate. No consignment lots to amount to anything noticed. Stocks in the hands of dealers are not large, but ample for made needs:
Pea Beans—
Hand-picked, choice.....\$2.10 @ 2.20
Common..... 1.75 @ 2.00

Change same period last yr.	Change from a year before	Change from 2 years before
Bushels	Bushels	Bushels
X 2,895,000	— 2,018,000	1,923,000
X 5,446,000	X 7,666,000	X 9,755,000
— 295,000	X 18,614,000	X 10,636,000
— 177,000	X 1,451,000	X 4,071,000

Mediums nominally about same as Pea Beans.

Red Kidneys, choice..... 2.90 @ 3.00
Brown Swedish long..... 2.00 @ 2.10
Round..... 2.25 @ 2.35

The price of choice hand-picked pea beans is 15c a bushel higher than two weeks before. Red kidneys 8c a bushel higher. Brown Swedish from 10c to 25c a bushel higher. A year before hand-picked choice pea beans were quoted at \$2.45 to \$2.50 a bushel.

HAY—Receipts, 2,689 tons. Market quiet. Offerings large and demand light for all descriptions.
Choice Timothy Hay.....\$16.50 @ 17.50
No. 1 Timothy..... 14.50 @ 15.50
No. 2 Timothy..... 12.50 @ 13.50
Iowa and Nebraska Prairie..... 12.00 @ 14.00
Illinois and Wisconsin Prairie..... 7.00 @ 8.50
The price of choice Timothy hay is 50c to \$1.00 a ton lower than two weeks before. Iowa and Nebraska Prairie hay from \$1.00 to \$2.00 lower than two weeks before. Illinois and Wisconsin Prairie hay 50c a ton lower than two weeks before. A year before choice Timothy hay was quoted at \$15.00 to \$16.00 a ton and Kansas and Oklahoma Prairie choice at \$13.50 to \$14.50 a ton.

STRAW—Rye straw quotable at \$7.50 @ 8.00. Oat straw at \$7.00 @ 7.50. Wheat straw \$6.50 @ 7.00. Rye straw is \$1.00 a ton higher than two weeks before. Oat straw 50c a ton higher, wheat straw is unchanged.

BROOM CORN—Demand is tame. Supply ample. Not much coming in. Few consignments on sale. Much of the corn is damp this year. Some Oklahoma damaged, damp, has been refused.
Per ton, Illinois corn.....\$120.00 @ 160.00
Oklahoma..... 100.00 @ 150.00
The price of broom corn is the same as two weeks before. A year before Illinois corn was quoted \$50.00 to \$100.00 a ton. Oklahoma \$50.00 to \$75.00.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:			
	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	3,265	3,772	5,994
Tuesday	3,526	4,342	4,507
Wednesday	3,649	4,573	4,526
Total	10,440	12,687	15,027

There is an easy feeling in the market for both fresh and storage, with prices for fresh ½c lower.

An irregular sort of business and not much of it at that. The demand for consumptive purposes is confined to supplying immediate wants and is not at all urgent, but there is some speculative movement, which is not without its influence on the market. Generally speaking, buyers are cautious about purchasing at present prices. Only a small percentage of the receipts are new-laid eggs. To satisfy buyers wanting fresh eggs, receivers find it necessary to rehandle nearly every lot coming to market.

Ordinary Firsts quotable at 28½ @ 29c.
Firsts are quotable 31c. To bring quoted prices eggs must run large to ne-laid eggs, 1th not over 24 eggs loss to the case.

Seconds—In good supply and in fair demand. Quot-

able 20 @ 22c per dozen for storage and about 24c for fresh.

Dirties—In good supply and in fair request. Quotable at 23 @ 24c per dozen for storage and 25 @ 27c for fresh. Refrigerator eggs are quotable weak. Demand only moderate and offerings fair. April Firsts quotable 27c. Extras quotable 27½c.

The price of eggs is about 2c a dozen lower than two weeks before.

Fruit

APPLES—Prices for barrel goods were quoted a shade higher. Dealers are now working on their own apples. These are coming out of coolers. They are being taken out as needed. Trade reported as very good. It is better in barrels than in boxes.

Some prices are as follows (barrels): Jonathans, \$5.00 @ 6.00; Northern Spies No. 1, \$4.50 @ 5.00; Ben Davis, \$3.75 @ 4.25; Baldwins, No. 1 to fancy, \$4.50 @ 5.00; Grimes Golden, \$3.50 @ 4.25; Greenings, choice, \$4.50 @ 4.75.

Some prices for box apples from the West follow: Arkansas Black, \$2.25 @ 2.50; Rome Beauty, \$1.75 @ 2.25; Jonathans, \$1.75 @ 2.25; Grimes Golden, \$2.00 @ 2.50; Delicious, \$2.50 @ 2.75; Spitzenburg, \$2.00 @ 2.50.

Big Equity Meeting in Idaho

Friday and Saturday, February 13th and 14th

The annual convention of the Inter-mountain Clearing House of the Farmers Society of Equity and associations federated for marketing will convene at Pocatello, Idaho, on Friday, February 13, for a two-day session. Special rate of one and one-fourth fare on all railroads. Every farmer in the district is cordially invited to attend this two-day feast of business co-operation. Great and important problems are to be discussed and acted upon. Come and learn how to sell farm crops for better prices and buy machinery and supplies at better figures. Every member of the F. S. E. and all other farmers who raise crops to sell are invited. —A. Y. Satterfield, President, Sterling, Idaho.

WRITE ME!

Get my new, low, factory prices on the Famous Galloway Engines and big, illustrated FREE catalog. My engines are standard, high quality engines. Made in sizes from 1 1/2 to 15 H. P. Over \$4,000 in use today. All sold on 30 days FREE trial, backed by five year guarantee and \$25,000 bond. Money back if not satisfied. Investigate! Quit paying exorbitant prices for inferior engine. Save middlemen's profit. Be your own dealer.

BUY DIRECT FROM THE MANUFACTURER

And Save \$50 to \$300 on Gasoline Engines

That comes about as near keeping your money at home as any way you can think of. Write me before you buy.

FREE Service Department that will help you select and install the best style and size engine you need for your work without cost to you. Let me send you my New 1914 Special Offer. Just write for my catalog and new, low prices today.

Wm. Galloway Co., Sta. 639 Waterloo, Ia.

farmers were treated so badly by the government and the ruling classes. If the government thinks flooding this country with foreign farm products will bring intensive farming they are making their calculations contrary to all precedents and rules of good business. If more abandoned farms are wanted and smaller acre yields, then we are headed in the right direction.

It is practically sure that Canada will soon remove the duty from agriculture products from this country and that will make our new law operative and Canadian wheat and other crops will come free into this country. Oh, but it was a great stroke for the millers, the removal of the tariff on wheat so they would never need to grind our wheat at a United States price and sell their flour in competition with a world's price.

The visible supply of wheat made only an inconsiderable increase since our last report against over two million bushels in the same period last year. Notwithstanding we are now contending with the largest crop the country ever grew, the visible supply is less than a year before and two years before. See the tables. The price is about the same as two weeks before, but is about 20 cents lower than a year before. The growing crop never gave finer promise.

The feature in the corn market has been the arrival of immense quantities from Argentina, which caused heavy declines in prices. Part of the loss has been regained. The prices average about the same as two weeks before and are about 15 cents higher than a year before. The visible supply made a large increase—nearly 7,000,000 bushels.

Nothing really new to report in oats except the prices are a shade higher than two weeks before.

Cotton is sharply higher than two weeks before, but another report on the crop is about due, which may change the trend of the market.

The final government report estimated the 1913 potato crop as 331,525,000 bushels compared with 420,648,000 bushels in 1912

Working My Way Through a Farm College

I WAS BORN the seventh child in a family of nine, and born a farmer's son. Up until my nineteenth year I lived the life of the ordinary boy on the farm. At the early age of 19, feeling the desire for a deeper insight into the governing principle of life, of endeavor and accomplishment, a broader education than I could obtain at our little country school, I took the teacher's route to reach my coveted goal. For one and one-half school years I attended the normal school at Chillicothe, Mo., and began teaching the young idea how to shoot in order that I might train my own ideas how to fruit. It was while teaching in the country schools that my ambition awakened and turned to scientific agriculture. I enjoyed teaching; and, seeing the growing demand for teachers of agriculture, I suddenly determined to fit myself thoroughly for that work, and decided to attend the agricultural college of the University of Illinois. Taking the full course seemed to be an utter impossibility, for, having had no high school education, it would be necessary for me to dig through four years of high school work in addition to four years of college work before I would be able to graduate. But so deeply interested had I become in the true science of agriculture I determined to take all the training I could to fit myself for my chosen career. I had saved some money from my teacher's salary, but not enough to meet the cost of a four-year college course. I was told by many that the expenses of the university training would not be less than \$400 a year. To make things harder, I had suffered an attack of typhoid fever and had undergone an operation for appendicitis. This ate so greedily into my savings it looked bad for a college career. My father owned the farm where I was born, and I might have obtained assistance had I called for it, but I was determined to pay my own way. An ambitious boy, I think, feels the desire to know that he can rely upon himself, and go it alone. It seemed to me that self-reliance, the ability to do things unaided, was the chief characteristic of all successful men, and I wanted to be successful. Therefore I felt I must measure up to the requirements for successful men, and prove my ability to succeed by successfully meeting my own expenses for college work.

I entered the university in the fall of 1909 as a special student in agriculture, high in hopes that I would be able to learn much of the science of farming, though I might not graduate. The day following my arrival I started out in search of work, hoping I could earn sufficient funds at odd tasks to pay my board at least. The first job I secured with the assistance of a friend who had been at the college for some time and was acquainted. The university employs students for some services, such as janitor and office work, paying from 15 cents to 17 cents an hour. I preferred work that would take me out of doors and give me exercise in the open, so I did not do any university work. Besides, I nearly always received at least 20 cents an hour on the outside. I did do janitor work for the veterinary science clinic, but as I was taking the course and had to be on hand I did the work and got paid for it. My first job was helping a dairyman, who let me put in all the time I cared to at 15 cents an hour. I milked, washed bottles, fed the cattle and did other small jobs. I did not remain long at this place, as I soon discovered I could get 20 cents

By Alfred Tate

Illustrated by O. Steward Imhoff

an hour doing odd jobs for people in the town and be nearer the university. Therefore I quit the dairyman and began to beat rugs, wash windows, mow lawns, fire furnaces—just anything people were willing to pay me for doing. I soon acquired a newspaper delivery route, and later on a laundry route, which I made pay me fair returns for my time.

My lack of orthodoxy gave me the paper route,

the druggist, which he did, and I secured the job. I liked the work, and the very fact that I could do it on Sunday increased my earnings by that much. I soon worked up a large route, supplying from 125 to 150 papers each Sunday—making many friends and increasing my opportunities for finding other work. I received 1 cent each for all papers sold, earning \$1.25 to \$1.50 each Sunday morning.

My laundry route also came to me in similar fashion. I secured a room from a student having his family with him, and who was like myself, making his own way. His wife was doing washing to help, and they suggested that I collect laundry, offering me 5 cents a bundle for the service. I found it an easy matter to collect and deliver twenty bundles each week.

Let me recount a bit of a humorous experience that paid me 10 cents quite unexpectedly. I had a small cart for delivering and collecting the laundry. Passing down a street one day with my "laundry wagon," I noted a stylishly dressed woman, with her arms laden with bundles, evidently returning home from shopping, stoop and pick up a large cat and resume her journey. The cat jumped from her arms to the ground, as all cats will do when carried. She was having trouble with pussy and the bundles. When I came up the lady turned to me and said:

"I wish I could take that cat home with me. Can't you help me?"

"I really don't know how I can assist you, madam," I replied, but after a moment's thought I reached down, caught up pussy and thrust her into one of the empty laundry bags and drew the strings and had the cat a prisoner. The lady led the way down the street and I followed. We traversed several blocks, and as kitty was nervous and was noisily and energetically objecting to such treatment, I had a very animated laundry bag in my cart, which attracted no little attention from passersby. Upon reaching the house I released a much insulted and dignified cat in the basement and was paid 10 cents for my part in the affair, though I told her I wanted nothing. She insisted, and placed a dime in my hand, which I kept more as a memento than as compensation for the service rendered. I have since wondered many times if I was guilty of being

an unwitting accomplice in the abduction of some one's pet.

During the vacation period I have always worked on a farm, to keep in touch with the practical part of my work. On two occasions I went to my brother's large farm ranch in Colorado, where I obtained much practical experience in irrigation and western methods. My other vacations were all spent on the home farm in Illinois.

I have had no trouble in obtaining all the work
(Continued on Page 9)

"I wish I could take this cat home. Can you help me?"

in this wise: A good friend of mine, who was an orthodox, was firing a furnace for a druggist to pay for his room. The druggist had the exclusive agency for this town for Chicago Sunday papers and offered my friend the opportunity to start a delivery route, assuring him good pay. But the work would require Sunday deliveries, and my friend declined the offer, saying his parents would never countenance such work for him. He told me of the circumstance, and as I had no compunctions on the matter, feeling it would not hurt either my conscience or religious standing, I induced my friend to take me around and give me an introduction to

Making Everlasting Good Roads

Country Road of Concrete

THE GOOD roads movement is one that will not down. While it is true that many do not support the movement, and many are opposed to it, yet the energy and enthusiasm of the advocates of better roads carries the movement forward and every year shows some remarkable developments.

We show on this page a photograph of the concrete road across the Illinois river bottom from LaSalle to Oglesby, Ill. The first concrete was placed in position on this road July 8. Construction is what is known as "one course." It is seven inches thick in the center and six inches thick at the edges, width twenty feet. Before beginning this road the county commissioners asked the county engineer for an estimate on cost of repairing the old macadam road and his answer was that at least \$3,500 per mile would be required to put the old road in a passable condition, and that the repairs would be but temporary. It was then decided to build a road on which there would be no maintenance cost. The result is one of the best pieces of concrete work that has been built in the country.

Although considerable of the material used in this road was donated by different firms, the cost would be approximately \$1.15 per square yard.

The LaSalle-Oglesby road was formally opened at daylight August 21. The citizens of LaSalle gave a barbecue. Prominent speakers, including Lieutenant Governor O'Hara, A. D. Gash, chairman State Highway Commission, and Norman D. Fraser, president Chicago Portland Cement Company, were in attendance, and the crowd was estimated at 20,000.

In view of the fact that under the old state aid law in Illinois the state must maintain all state aid roads, the highway commission has stated that it will not O. K. any road as a "state aid" road unless it is built of concrete or brick.

DOGS, SHEEP AND THE LAW

A GREAT DEAL of attention is being paid of late to the sheep-killing dogs and a way to protect farmers from losses they can not easily recoup by having their sheep killed by dogs. Many remedies have been suggested. Some have been tried with more or less effect, usually less. But because of the apparent fact that the sheep constituency of our live stock population is on the decline, and the demand for wool and mutton is growing larger, also because sheep are very efficient in keeping down otherwise useless and injurious vegetation and in building up soil fertility, those concerned in the welfare of the farmer in particular, and the public in general, are urging more sheep. The editor of one of the popular agricultural journals, not frightened by free wool, a farmer in

his own right, recently bought a flock of fifty, and in discussing the sheep industry said:

Almost every farm needs sheep, no matter what the price of wool may be. The dog question is a far more serious thing

for the farm flock than the tariff question, and the dog problem lies in the disposition of every man to believe in his own dog. I impeach the dog of causing scarcity of mutton, and of clothes; of high treason in causing waste, and hindering production; and yet, when he comes wagging his tail my compassion is his, for I love him—damn him! * * *

This farmer-editor has little faith in a dog tax law. It's not enforced, for various reasons. So he advocates a new law, to list every dog with its description, make a record of its ownership, and make it so expensive and difficult for any person to acquire a new dog that it would automatically shut off the everlasting supply of "new" dogs and thus rid the country of the worthless, the predatory and the ownerless dogs, yet would allow the "Pontos, Fidos, Neros, Gyps, Sheps and Rovers to live out their days" provided they were not caught red-fanged in a criminal deed.

An Iowa farmer, acknowledging the impotency of the dog tariff, high or low, to keep down the number of marauding canines, comes forth to propose a law permitting any one and compelling officers to kill any dog not wearing a collar of a certain description, bearing a plate with the name (not the initials only) of the owner, and a registry number. Then put a high protective tariff on all the good

dogs by taxing the poor dogs out of existence.

No doubt the hordes of useless dogs consume enough food supplies which, if fed to chickens or pigs, might have some effect on the high cost of living, and as this cost bears upon human beings it seems not unreasonable to make it apply to dogs as well. At any rate we all admit a worthless dog or a sheep-killing dog ought to be sent to the Indian's happy hunting grounds. We all agree—unless it be the owners of the dogs.

THE SIDE-CAR MOTORCYCLE

Ready for a Rapid Run to the Creamery

One of the most delightful, and at the same time inexpensive and useful machines a farmer can have, is what is known as the "side-car motorcycle," shown in the illustration. It is capable of a vast amount of hard usage in both work and play. It is very light in comparison with an automobile, and costs much less to operate, yet has as much speed and is exceedingly strong. No one who studies the picture needs to be told what different things can be done with this nobby little car. There will soon be scores of them skimming over our country thoroughfares.

SECOND-HAND POTATO SACKS

THE DEPARTMENT OF AGRICULTURE has issued a caution to potato growers against the use of second-hand European potato sacks unless thoroughly sterilized since they contained foreign potatoes.

A number of the most serious potato diseases, including the late blight, silver scurf, both dry and soft rots, common scab and the powdery scab, have been imported, and the germs of these diseases undoubtedly are carried in the sacks in which potatoes have been imported and are a source of infection to potatoes.

There is a considerable trade in such second-hand foreign potato sacks between dealers and potato growers. In some instances entire shipments from the great potato district have been made in foreign second-hand sacks. Farmers should require dealers to guarantee that the sacks have been sterilized. Purchasers of seed potatoes should specify that the potatoes must be in new, or sterilized second-hand sacks.

ALFALFA GROWS IN FAVOR

The West Central Minnesota Development Association recently put through one of the largest orders for alfalfa seed ever given in the United States. The contract calls for five car loads of registered seed, at a cost of \$30,000. This purchase will be distributed over seventeen counties, meaning about 100 bushels to the county, and will seed more than 5,000 acres of ground. All the seed is registered, of the hardiest variety, and has been tested by thirty years' growth. It was produced in South Dakota.

The Magic Flight of Thought

AGES ago, Thor, the champion of the Scandinavian gods, invaded Jotunheim, the land of the giants, and was challenged to feats of skill by Loki, the king.

Thor matched Thialfi, the swiftest of mortals, against Hugi in a footrace. Thrice they swept over the course, but each time Thialfi was hopelessly defeated by Loki's runner.

Loki confessed to Thor afterwards that he had deceived the god by enchantments, saying, "Hugi was my thought, and what speed can ever equal his?"

But the flight of thought is no longer a magic power of mythical beings, for the Bell

Telephone has made it a common daily experience.

Over the telephone, the spoken thought is transmitted instantly, directly where we send it, outdistancing every other means for the carrying of messages.

In the Bell System, the telephone lines reach throughout the country, and the thoughts of the people are carried with lightning speed in all directions, one mile, a hundred, or two thousand miles away.

And because the Bell System so adequately serves the practical needs of the people, the magic of thought's swift flight occurs 25,000,000 times every twenty-four hours.

Pastoral Paragraphs

Every normal man loves a good horse.

Are all the tools where they ought to be? If not, they will soon dig a hole in your pocket.

Sam Saxon says that new born pigs, calves, and colts all find a suckulent ration the most satisfying.

Bottles made of red colored glass have been found to keep milk sweet much longer than clear glass bottles.

Oh, yes, the city-bred boy has the same chance to succeed as a farmer as the farm boy has to win success in the city. But it takes the same grit and ambition.

It will soon be time to test out the seed corn. A farmer being by necessity a handy man can readily make a seed tester. But whether made at home or bought, the seed corn should be tested thoroughly, every ear of it.

Green's Fruit Grower tells of a "Skiddoo" orchard. Must have been one where twenty-three trees bore twenty-three fruits each, which were stolen by twenty-three rascals. No skiddoo orchards for us, thank you.

The Country Gentleman is running a series of articles entitled "Back to the Farm—Net." The city gentlemen who read it change one letter in the title, making it read "Back to the Farm—Nit!"

MINNESOTA CORN

THE CORN CROP of Minnesota for 1913, as estimated by Fred D. Sherman, commissioner of immigration, amounted to over 100,000,000 bushels. The average yield was 42 bushels to the acre. About 2,438,000 acres were planted to corn. Mr. Sherman bases his estimate on information secured at first hand from every county in the state, which he has every reason to believe reliable. All counties reported, and from the county reports the state average of 42 bushels to the acre was struck. The acreage was based on the official reports of the United States Department of Agriculture. The exact acreage being 2,438,666 acres, with an average yield of 42 bushels to the acre, at current market prices the value of Minnesota's corn crop would exceed \$70,000,000. The crop, however, is not marketed to any great extent in this state. It is fed to hogs and other stock.

While the bulk of Minnesota's corn crop is still grown in southern and central Minnesota, the corn belt is rapidly extending to the north and northwest. The prize corn exhibited at the Minnesota state fair this year was grown in Pine County, sixty miles north of St. Paul. A yield of 125 bushels to the acre, from a field of forty acres, is reported from Faribault County.

Forty years ago practically no corn was grown in the state. The farmer in a southern county who could point to a three-acre patch of matured old Indian flint corn thought it a remarkable achievement. The yield of corn per acre in the same section of Minnesota in 1913 exceeded that of the recognized corn states of Illinois, Iowa, Kansas and Nebraska.

The rapid extension of Minnesota's corn area northward warrants the conclusion that the time is not far distant when corn will be a staple, if not the principal crop in the state. It has already been brought to maturity in Roseau County on the Canadian border. The farther north they are grown the hardier do the hardy varieties become. A decade ago few believed that corn would ever mature in the Red River Valley. This year some of the best crops in the state are reported from there. To anticipate that corn will ultimately mature to the state's northernmost borders is warranted by the past history of corn growing in Minnesota.

BUILD ROADS AROUND THE HILLS

THE AVERAGE LIFE of horses and automobiles may be increased and the cost of hauling reduced, according to the office of roads of the Department of Agriculture, by relocating many old roads and the more scientific laying out of new ones. The natural tendency in road building is to build a straight road, whether it goes over steep grades or hills, or not, and pulling over these grades naturally adds to the wear and tear on horses and vehicles.

The doctrine of the office of roads is that the longest way around may often be the shortest and most economical way home, and that frequently by building a highway around a hill or grade but little appreciable distance is added and this is more than offset by the reduced strain of hauling.

The chief drawback from the farm owner's point of view is that the laying out of roads on this principle of avoiding grades necessitates, in some cases, running the road through good farm land or orchards or pastures, instead of going around the farm line and building the road through old worn-out fields and over rocky knolls. This, of course, must raise a question in the mind of the individual land owner as to whether the cutting up of his property by a road yields him individual advantages and so benefits his community as to offset the use of such land for a road, or to overcome the inconvenience of having his land divided. In this connection the office

of roads points out that the running of a road and the resulting traffic through a good farm, where there are good sheep, cattle, horses, grain, fruit or vegetables, has a certain advertising value and in many instances makes the land more valuable. In other cases the importance of such a level road to the community is so great that it might well repay those using the road to give the farmer the equivalent in land equally good in place of what he has sacrificed to the common welfare.

At any rate the office of roads is now taking special pains to make clear the economic advantage of avoiding steep grades in the roads, even at some sacrifice of better land. Investigation shows that the laying of such roads over hills has resulted more from attention to the preservation of farm lines than from scientific attention to the problem of road building.

According to the testimony of farmers consulted, where a horse might be able to pull 4,000 pounds on a level road, it would have difficulty in pulling 3,000 pounds up a steep hill. The size of the road, therefore, tends to be measured by the grade of the largest hill on the road to market. In a number of cases actual experiment shows that that the relocating of roads around hills has been accomplished either with no addition in road length in some instances and with the adding of only a few feet to the highway in others. The office knows of no case where a properly relocated road which has cut-out grades has led to any question as to its material reduction of hauling costs.

WORKING MY WAY THROUGH A FARM COLLEGE

(Continued From Page 7)

I could manage, and frequently had calls I could not fill. Willingness, courtesy, care and thoroughness gave me a reputation I capitalized to my advantage.

I soon became obsessed with the idea of graduating. By taking many examinations, attending the summer sessions and turning in some of my university work, I was able to satisfy all entrance requirements at the opening of school in 1911, and thereby became a regular instead of a special student in the college, and at the end of the third year I found that I had so far been able to do enough outside work to pay all my expenses; that my savings when I entered the school at first were still intact, and I had added a small balance to the account. So I saw my way clear to become a graduate and am now wearing a senior hat. With no great misfortune, I shall graduate in June, 1914, and will have \$1,000 at interest. I have no boast to make. I have neither unusual ability nor have I had exceptional opportunities which do not come to nearly all farm boys. Speaking from my personal experience, I am quite sure any normal, ambitious young man can get the education he needs if he is willing to work.

Earning my way has not prevented me keeping up with my classes, though I have always taken the full schedule. I have never failed in any study, and my grades have been above the average. I have had to sacrifice much of personal pleasures, for when I was not working for wages I was digging in my books. Being a firm advocate of early to bed, early to rise, I have burned very little of the midnight oil, though in the pinches I have studied late and was up and at it by 4 o'clock in the morning.

My purpose, as I before stated, was to prepare myself for the profession of teaching agriculture. I expect I shall follow that course, for a time at least. Possibly I may secure an advantageous position as manager of a stock farm, which I would prefer to teaching, as I have specialized in animal husbandry. But my fixed intention is to own and operate a farm as my business in life, a business to which I can bring a trained mind and a fair knowledge of the forces which make for success.

The course I have taken at the agricultural college has not only opened up a vista of greater opportunities, but has found for me new interests and delights in a vocation that my college course has dignified. To succeed, one must love his work, and the college has taught me to love the farm and its labor.

Farm Rentals in Indiana

A plan successfully used in Indiana is this: The owner puts up his farm against the tenants' work. They have equal interest in live stock, crops, implements and expenses. The owner pays the taxes and makes all the permanent repairs. The tenant hires all the extra help needed. All the returns, including those from garden and poultry, are shared equally. The tenant, as a rule, makes all the plans for the operation of the farm, although the recommendations of the landlord are considered. This plan tends to keep the tenant on the farm for a longer term of years than either cash or "grain" rentals. Cash rent in central Indiana is \$6 per acre. Grain rent usually calls for from one-third to one-half the grain and hay, the tenant furnishing everything.

Too Plain

"I think your preacher is a nice man and a good speaker, but I doubt if he ever makes a very great success."
"Why do you think that?"
"I could understand every word he said."

Burpee, Philadelphia,

side we shall be pleased to send THE LEADING AMERICAN SEED CATALOG, a bright new book of 182 pages, which should be read by all who would have the best garden possible and who are willing to pay a fair price for

Split-Hickory Vehicles

Buy With Your Neighbors—Save Fence Cost

Write us for special low prices on co-operative buying of Empire Fences. Get your neighbors to join you in ordering. We will quote you lowest wholesale factory prices. Joseph Stangle, Constantine, Mich., writes: "Empire fence can't be beat. My fence, put up seven years ago, as good as the day I got it. Expect neighbors to go in with me to make up big orders." Ask for FREE BOOK of facts about fence quality; illustrates and describes

No. 9 Empire and Empire, Jr.

Open Hearth Steel, Big Wires, Heavily Galvanized

This book will show you why the No. 9 Empire and the Empire, Jr., made of Open Hearth Steel, great big wires, galvanized as wire fence should be galvanized, will outlast any soft Bessemer steel fence ever made. It illustrates our big wires—the strong Empire knot that holds good as long as the fence. It will show you why Empire fences are proof against any and all kinds of weather, rust, rot—proof against the hardest use—why they do not sag, why they stay hog-tight and cat-

tle tight as long as they are in use—why they are by far the least expensive fences to buy in the long run.

Farmers everywhere are investigating fence quality. Users insist on knowing the quality underneath, just as they know how to judge a horse. You cannot fool an experienced buyer with an old horse doped up—polished up—to look like a good horse. You cannot fool an experienced buyer with a poor fence doped up to look like a good fence.

Bond Steel Post Co., 61 Maumee St., Adrian, Mich.

The Safest Breech-Loading Gun Built!

12 and 16 Gauge Hammerless "Pump" Guns

Six Quick Shots!

The Marlin

shotgun is a fine-appearing, beautifully-balanced gun, without any objectionable humps or bumps; no holes on top for gas to blow out through or water to get in; can't freeze up with rain, snow or sleet; its solid steel breech (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; it is the safest breech-loading shotgun ever built.

It is Hammerless with Solid Steel Breech (inside as well as out)—Solid Top—Side Ejection—Matted Barrel (which costs \$4.00 extra on other guns)—Press Button Cartridge Release—to remove loaded cartridges quickly from magazine without working through action) Double Extractors—Take-Down Feature—Trigger and Hammer Safety. Handles rapidly; guaranteed in shooting ability; price standard Grade "A" 12-gauge gun, \$22.60; 16-gauge, \$24.00.

Send 3 stamps postage for big catalog describing all Marlin repeating shotguns (hammer and hammerless), all Marlin repeating rifles, etc. Do it now!

Our Country Contributors

Semi-Monthly Prize Letter Competition:

First Prize \$3.00 Second Prize \$2.00 Third Prize \$1.00

This department is designed to induce subscribers to contribute accounts of their farming experiences, their most profitable crops, or their ideas on any subject of general interest to farmers. Every farmer is invited to contribute an account of his most profitable crop, telling what made it so, in figures and facts. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell your story in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, UP-TO-DATE FARMING, Indianapolis.

THE SQUARE DEAL FOR FARMERS

(First Prize)

I am glad of the opportunity to express a few of my thoughts in regard to your paper and what it stands for. Farmers should lend their assistance in the work you are doing. Farmers desire a square deal. If they don't get it they should demand it, and it is plain enough they are not getting it in all cases. Here in Nebraska the trend of affairs at present looks favorable to the farmer. The resolutions that were drawn up at the "farmers' congress" which was recently held at Omaha were good, but other things could have been added. Yet it was a step in the right direction.

Our agricultural college and state experiment farm are helping us all they can to improve the soil so as to grow better crops, also how to improve our live stock, etc. This is all right. Every farmer should grow all he can on each acre he puts in crops. But there still is a very essential thing lacking. After a farmer raises a crop is he going to be able to market it at a fair profit? A farmer must have a profit just the same as any other business man. Here is where your paper steps in and points a way for the farmers to solve some of these troubles. Co-operation is the key to the situation. We now have our parcel post. A co-operative plan should be established between the farmer and consumer so as to get all the benefit possible out of any produce that is or can be sent by parcel post. The consumer should be in a position to know just what the farmer has to sell at any time of the year, and the farmer should know just what the consumer in the city needs. By a co-operative plan a farmer can get more for his produce, deliver in better condition, the consumer will get the produce cheaper and also a quick delivery from the necessary middleman. If farmers must organize to get a square deal, the sooner they get at it the better. Farmers have different organizations. They organize and build elevators, so as to get a better price for their grain; have their county and state fairs, live stock exhibits, corn-growing contests for the boys, etc., but they don't take into account a plan and a system for the equitable distribution of their farm products.

This is a plan well worth looking into. Time after time have I seen local markets glutted with different farm products—no sale at any price to pay for handling it. Only in a short time this class of produce was gone. Farmers did not or would not try and keep it until there was a demand for it. Of course, some stuff is perishable and won't keep. Why can't the farmers, at a time like this, be prepared to operate a co-operative canning factory and can the surplus produced that is "cannable." It surely could be disposed of at a profit.

There was a shortage of potatoes here this fall. The merchants bought direct from the growers and sold to the consumers at an average price of 85 cents per bushel. What potatoes I saw were good ones. I don't know how much the merchants' profit was, but the farmers that had to buy could get them direct from the car in any quantity they wanted. But the point

I wish to bring out is this: If the merchant could always buy for the farmers and from the farmers at a satisfactory price it would save the farmers a lot of trouble, but in this I don't believe the merchant could always do this, even if he were disposed to do so. I believe in patronizing home industry as far as possible and in co-operation. I think it a good plan to include the home merchants and dealers of the different kinds in our country towns. A square deal is all any one should ask for. Our motto should be: "Better citizens at home, to make our county better, our state government better, also our national government better," for a government can be no better than the majority of its citizens. Every man, woman and child should be given a square deal.—John I. Morris, Nebraska.

A SELF-HELP CLUB

(Second Prize)

One of the inconsistencies of farm life, it seems to me, is the prevailing desire of so many parents to have John or Mary receive a good education in order that they may get away from the drudgeries of the farm. I well remember, when I began to plan for high school, how I was complimented on the good sense I was showing in preparing myself for something better than the calling my father had followed all of his life, and, boy like, I believed no drudgery could go with a white collar and a pair of patent leather shoes. But it is there just the same! And it is not on the farm at all if one does not care to have it there.

Drudgery is more a state of mind than anything else. If we persist in disliking anything the act of doing that thing becomes a burden. So I believe that instead of educating boys and girls into a distaste of their environment we ought to go at it the other way 'round. And no better plan can be followed than that of first making ourselves satisfied.

Now I do not mean to preach. Sermons are often obnoxious (which probably explains why so many people sleep through the Sunday services) and they are especially distasteful in fellows like myself trying to write for publication, but I could not resist the above before explaining a plan we have for whiling away the winter evenings and of getting rid of the idea of so much of our lives being spent in drudge work.

In the first place, none of us connected with our club believe there is any more drudgery on the farm than anywhere else, and we pledged ourselves to try to keep others from thinking it. We believe every calling presents more than one side, and so we take the bad with the good. However, chores and things of that sort do not appeal to us as being drudgery, because they are only the means to an end and absolutely necessary to success.

There were only four of us at first, but now we are practically a community. We meet occasionally—there are no regular meetings, except at the regular institutes held twice a year—but when any new thing comes up we meet and talk it over. Each member who has any literature on the subject

LITTLE GIANT CORN SHELLER

Just Out and Entirely New
This sheller is a little wonder. Will do the work equal to any other hand sheller. No springs to jar loose, and a adjustment simple and accurate. Impossible to get out of order. The sheller deposits the corn in the box on which it is mounted, and the cobs outside. Is made on honor and will last a lifetime. Will easily shell eight bushels per hour. Price 75c F. O. B. here.

O. K. SEED STORE
INDIANAPOLIS INDIANA

brings it and we try to discuss the question in a manner that will bring out the features that most benefit us. Men and women both take part in these discussions, because both as a rule are equally interested. Besides these talks, we have a reading circle that is both interesting and instructive. Each member or person who has any reading material of an instructive nature along our line of work donates it to the circle. The farm papers go the rounds the same way, and every year we purchase a few books on farm subjects that will be as interesting as possible to the youngsters. In this manner, and by giving them a certain department of the farm to look after, we aim to keep their interest alive to the everyday problems of life.

We are not a well-organized body and we do not even rejoice in a club name, but we feel that we are helping ourselves and helping our young folks to see farm work in a light other than that of drudgery, and we know that we are succeeding.

This idea can be made to help any community, and depends upon the individual's themselves for the degree of success it will attain. It is interesting because we are dealing with things that we know something about and it is more so because the more we learn about our work the easier it will be to take care of it.—W. C. Smith, Indiana.

WHAT IS WRONG WITH FARMING? (Third Prize)

Now that Up-to-Date has taken its patrons into its confidence and given every reader a chance to offer his opinion upon any subject pertaining to the welfare of the American farmer, there is no excuse for any one not being heard if he has an opinion to offer or suggestion to make. I, for one, think this a long stride toward solving the various and complex problems that beset agriculture at the present time.

The farmer knows, as no one else does, that there is something radically wrong with his business. Some tell us we don't raise enough stuff, others that we don't rotate our crops, don't mature enough or that we don't plow or cultivate our crops properly; that we ought to have this thing, that thing or the other thing to make it go.

There seems to be a prevailing idea among the press and public in general that the farmers have sufficient money. Now it would actually surprise many a city man to know the small income derived from an ordinary small farm. If he were to move on the farm its annual income would look like a monthly pay check to him.

I believe that the best crop grown in this country in the last twenty years was not sold for what it cost to grow it, if figured on a business basis. And I further believe that if the raising of crops and live stock were the only incentive to keep men on the farm that man would leave as soon as he could. Of course there are some, especially in the corn belt, and possibly some wheat and cotton growers, that may be making money, but, taking the country as a whole, I believe it takes about a year's crop to grow the next one.

So this question resolves itself into one of two things—either the price of products of the farm must be maintained or go higher, or the cost of farm operations must be greatly reduced.—C. F. Schneider.

"PICKLE PRODUCTION."

So far as I have experienced the production of cucumbers is the most profitable thing connected with the farm.

My plot of ground for "cukes" is never large; last summer five square rods would about catch it. The soil was prepared early as practicable and I guarded the tender plants against frost by the use of smudge fires on chilly evenings. When danger of frost was past I had to turn my attention to the bugs. These I put to flight by a liberal sprinkling of red pepper. When the vines once begin to bear it is marvelous the quantity of cucumbers they will produce. I pick them carefully when they are an inch to one and one-half inches in length. In this way they make the choicest sweet pickles. Last summer I put the finished product in pint glass jars. An hour a day usually sufficed for picking them and about two hours for the pickling process. I found that by careful handling of the vines that they bore all told a period covering about 40 days, and in that time produced a total of 240 pints, or an average of 6 pints of the finished product daily. These were sold readily to individuals at 35 cents per pint; many

bought 10 to 25 pints to put away. Of course greater quantities can be produced by letting them get larger but they would not be choice and are harder to sell. As nearly as I could tell there was a profit of 25 cents per can, so that the 240 pints netted me \$60.00 or about \$1.50 per day for the time in which they were bearing.—Mary W. Thornton, Dwight, North Dakota.

IN DEFENSE OF CANADA'S CLIMATE.

In your December number of Up-to-Date I was somewhat amused to see by one contributor a reference made to Canada's climate—"Nine months winter, no fruit grown but hardy berries"—and such talk. I am a Canadian and a fruit farmer of many years' standing. Our peach picking season was from the end of July until the middle of October. The part of Ontario where I farmed, although its village was only composed of two stores, two blacksmiths, postoffice, large school, two churches, and town hall, is a fruit center, and from which 152 cars containing 1,800 baskets to the car, was shipped in one week to the Canadian west, to New York state, and to England. I think the average American citizen generally thinks of Alaska when speaking of Canada. I have been asked since coming to California "whether Canadians speak the English language"—and that by grown-up young and intelligent people. Canada is large enough to have all kinds of climate and has it.—C. J. Pettis, California.

International Harvester Oil and Gas Engines

Have you a washing machine and a churn at your house? Do you pump water, saw wood, grind feed, run a cream separator? Probably most of these things are everyday chores with you.

Do you do this work by hand? If so, you will be able to save yourself a vast amount of work, secure much time for other work and live an easier life by letting an International Harvester oil or gas engine do this drudgery for you.

An International Harvester engine will last years after more cheaply built engines are worn out—working for you economically and without trouble. You will understand this when you are acquainted with International Harvester engine features—these, for example: Accurately ground piston and lapped rings, offset cylinder head, large valves, detachable valve guides, fuel pump, etc. The engines are of all styles—vertical, horizontal, stationary and portable; air and water-cooled; from one to sixty horsepower. They operate on the cheapest or most convenient fuel.

Learn all about them at the local dealer's. If he does not sell International Harvester engines, write us for interesting catalogues and full information. Drop us a postal card today.

Drenches, and How to Give Them

HOW, when and with what to drench a horse or a cow is what every farmer should know.

It is very easy to suffocate a cow by letting portions of a drenching fluid run down the windpipe into the lungs. Sometimes medicine getting into the lungs sets up irritation that results in mechanical bronchitis or pneumonia, which often terminates fatally.

Always hold a cow's head in a straight line with her back bone when giving a drench. Stand on the right side of the animal, pass the left hand and arm over the face of the cow,

insert the left hand in the side of the mouth, then insert the long neck of the drenching bottle in the right side of the mouth, not too far, and allow a swallow or two of the fluid to run into the mouth. If the animal coughs let her head down at once.

A drench usually should consist of about three pints of fluid. Don't be in too much of a hurry. Take your time and allow the cow the same privilege.

The favorite physic drench for a cow consists of one to two pounds of Epsom salts, one-half to two ounces of ground ginger root, a cupful of blackstrap molasses, one-half to one cupful of salt and three or four pints of warm water. Be careful not to mix coarsely ground ginger root, caraway seed, fennel or aniseed in a drench. The coarse particles always cause irritation and cough.

The average cow takes the smaller dose above mentioned; the large dose is for a big bull or heavy cow, or given in a case of great necessity or emergency; for example, when a cow has impaction of the bowels, or when she has taken some poisonous matter. It should be added that costiveness does not require the use of a physic drench. This is better relieved by alteratives such as calomel, rhubarb, gamboge, etc., along with stimulants, such as nux vomica. These drugs are best prescribed by the veterinarian.

Errors are quite as common in the drenching of a horse. First one should understand that medicine must never be given by way of the nostrils. So administered, it will be certain to flow into the lungs and cause fatal pneumonia. We have known of horses killed in this way.

The right way to drench a horse is as follows: Back him into a stall; then he can not back away. Put a running noose in a soft half-inch rope, cotton preferred, and place the noose around the upper incisor (pincher) teeth, just inside of the upper lip. Have the knot of the rope come directly in the middle of the front of the upper jaw. Throw the free end of the rope over a beam well above the horse's head. Raise the head and hold it there with the noose and rope. Get the head high enough to prevent medicine from running out of the mouth, but do not pull it up so high that the horse will be unable to swallow comfortably. Stand on a chair or box so that the right hand holding the bottle may insert the neck of the bottle into the right side of the mouth. Then pour in a couple of ounces of medicine and let the horse swallow that before more is given. Do not grasp and squeeze the horse's throat. This makes it difficult or impossible for him to swallow. Tickle the roof of the mouth with the neck of the bottle or fingers and swallowing usually will occur. If not, then pour a teaspoonful or so of cold water into the nostril and the medicine will be gulped down at once.

Be sure that the medicine is not so strong that it will burn the mouth. Be certain that it is the right medicine to give. It is always well to go slow in drenching a horse.

LIVE STOCK NOTES.

Never try to make a pet of the bull.

It takes a record of a year's production to tell the value of a cow.

Alfalfa is undoubtedly the best hay for cattle of any kind, for any purpose.

If there's any place where cleanliness is goodness it is in and around the dairy.

Equal parts oats and bran, with one-fourth the amount of corn added makes an excellent ration for the brood mare.

The last 200 pounds put on a horse being made ready for market is the

most profitable "meat" produced on the farm.

On Sundays and holidays, if the horses are kept standing in the barn, put them on half rations so far as grain is concerned.

An Illinois farmer who fed a herd of hogs put on them an average gain of 80 pounds each in 54 days. Have you ever done as well?

How many of our readers, in teaching a young calf to drink, put the hand over the nose when putting the finger in the calf's mouth? This interferes with the breathing, and the calf resents it. The way to do is to put the hand underneath. Try it, and you will have far less difficulty teaching the calf to drink.

The Butter Business

A. E. Potter is an Ohio dairyman with a 91-acre farm, on which he handles twenty Jersey cows. The cream he produces is made up him into butter, which he markets direct to consumers in the little city of Athens, nine miles distant from his farm. The butter is packed in crocks of different sizes, holding from one to ten pounds, and he makes deliveries once each week. He makes a superior article, and the demand is so great he has a long list of waiting people who want to become regular patrons, but can not be supplied. Mr. Potter is able to command prices for his butter at from 3 to 4 cents per pound above the retail price of creamery butter in the same market.

THIS O.I.C. SOW WEIGHED 932 LBS. AT 23 MONTHS OLD

IONIA GIRL

DE LAVAL

Butter Triumphs as Usual At National Dairy Show

BUTTER made from cream separated by De Laval Separators made the usual clean sweep of all highest awards at the 1913 Chicago National Dairy Show and Annual Convention of the National Buttermakers' Association, just as it has always done every year since the organization of the National Association in 1892.

Whole Milk Creamery Butter The highest score in this class was awarded to O. N. Peterson of Rapidan, Minn., a De Laval user, as were 187 out of the 200 whole milk creamery entries.

Gathered Cream Creamery Butter The highest score in the gathered cream factory-made butter class was given to R. O. Brye of the Readstown Creamery Co., Readstown, Wis., this prize-winning butter being made from the cream of farm patrons all using De Laval Separators.

Farm Dairy Butter The highest score in this class was awarded to Mrs. D. H. Turnbull of Monmouth, Ill., whose family has been using De Laval Cream Separators for over twenty years.

De Laval Superiority Indisputable The evidence of the superiority of De Laval cream and butter as demonstrated by the winning of all highest awards the world over for thirty years is so overwhelming as to be indisputable and unanswerable. A De Laval catalog, to be had for the asking, will make plain the reasons for it.

Overdoing the Poultry Business

By H. H. Johnson

Occasionally it is suggested that half a million incubators lead towards overdoing the poultry business. Has any one found prices going down or a market that is flooded? I looked for such things once, but have given it up. The increased production of poultry merely stimulates the demand. While the production is nearly double that of ten years ago, the demand is keener than ever and prices have advanced accordingly.

From the thirteenth census of the United States, 1910 bulletin, I find that the average price for eggs in 1899 was 11 cents to 12 cents per dozen; in 1909 it was 19 cents to 20 cents per dozen. When we think of all the big packing houses handling poultry, the ever in-

creasing prices, we get a glimpse of poultry-raising possibilities. Poultry is replacing other meats. It will have to. It is adaptable to small farms, requires no capital or special equipment and is a real, live, money-making business.

Some feel that there is a time, a best time, to start raising poultry or to buy incubators, but waiting usually means loss of time or money.

The farmer who actually waits for spring to begin his farming is seldom ready when spring does come. He finds his harness needs repairs, his plows need brightening and seed needs cleaning. He waited when there was lots to be done towards getting ready.

The raising of poultry is no exception. It's an all-the-year-around business, with a steady market and a beginning place every day. Early hatching makes high-priced spring chickens and fall and winter layers. Late summer and fall hatches go to a profitable market or can be held to increase the early spring egg production and then marketed. No big capital is required or special equipment.

Poultry is the quickest meat produced and is rapidly replacing beef and pork. Also it is produced cheaper and sells higher. It means no risk. Think of losing a bunch of fat hogs after one's crop has been fed to them. Many years ago I had just that kind of experience, only I had bought mill feed.

In the droughty years of 1894 to 1897 mother hatched chicks all summer. She made no fortune, but she made something and helped keep the household. Both poultry and eggs are higher now, so there is a bigger margin.

"As soon as possible" is as near to saying the right time to start as any time I know of. A really good incubator does the work in zero weather just as well as in May or June. It's made right for any climate or season.

WEE CHICKS ARE GOOD TRAVELERS.

In the current issue of Farm and Fireside a contributor shows how little chickens one day old can be sent safely by express from 200 to 1,000 miles, and reach their destination alive and in good condition before they are fairly dried off. Today the shipping of day-old chickens has become a leading branch of the poultry business. Thousands and thousands are shipped all over the world, all times of the year. The following extract from the article explains why such small chickens can be shipped so far:

"Some people do not know that a chick, which escapes from the shell in which it has been a prisoner for three weeks, will stand a lot of abuse and live, provided you are not too harsh with it. Nature has provided a supply of nourishment for the little fellow in the form of the yolk of the egg from which it is hatched. As the chick comes from the shell with the undigested yolk yet in its body, it furnishes all the food that the chick needs for the first forty-eight hours of its life. When the little chicks are packed away for several hours during shipment they continue to gain strength and are much better off than if they were exposed to the sudden changes of running in and out of the hover of the brooder. And these are the reasons why so many are sent and reach their destination in safety."

One of the most foolish things in the world is to lose the temper over anything a hen does. It only makes matters worse to tear around and set the whole house in an uproar. We all do more foolish things than any hen ever did.—The Farm Journal. And, what's more, we knew better all the time and the hen didn't.

Poultry Pickings

Feed well, but make the birds exercise.

Sprouted oats gives wonderful results at this time.

Now is the time the incubator and the broody hen are in demand.

Without plenty of water for drinking and washing ducks can not thrive.

Turkeys can be made profitable where there is plenty of free range.

The first three months of a fowl's existence determines its life's usefulness.

Chicks hatched this month and next require good care, but they will pay for it.

Now is the time to market the old heavy gobblers you failed to dispose of earlier.

A suitable house and range should be the first consideration in making poultry pay.

The secret of winter eggs is early-hatched pullets, well grown, well sheltered and well fed.

Careful and constant attention to details is the chief requisite of successful poultry keeping.

Good food can not make up for poor quarters; neither can good quarters make up for poor food.

It is overcrowding, not lack of meat or salt, that causes feather eating amongst fowls. Give them room, and this bad habit will not develop. Once started, there's no stopping it. Get the ax, the only sure remedy.

43 VARIETIES poultry, pigeons, ducks, geese, waded fowl; incubators; feed and supplies. Catalogue 4 cents. MISSOURI SQUAB CO., Dept. A. L., Kirkwood, Mo.

Tells Why Chicks Die

J. C. Reefer, the poultry expert of 1609 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should write Mr. Reefer for one of these valuable FREE books.

Your Name Please?

So Johnson Can Send You the Old Trusty Book Johnson wants you to get from it the same ideas that helped half a million other people make big profits with chickens. It will show you how easy it is to get started and how simple the work is with the Old Trusty Hatcher. There is no mystery about chicken raising once you get acquainted with the Johnsons, and that's easy—just your name and address on a postal will do.

OLD TRUSTY

Makes biggest average hatches in coldest or warmest weather—over 80 per cent guaranteed—in every state, everywhere. Now used by three or four times as many people as those who use any other. The reason is—the Old Trusty is simple and easy to operate and always sure of success. No highfalutin' instructions needed.

It's the highest grade hatcher made. But Johnson's direct factory price is low because he operates the largest incubator factory in the world. Every buyer saves about \$5 because of this big factory.

Write your name today—get the book so you can give your income a good big boost with chickens. Johnson pays freight and ships immediately.

JOHNSON, Incubator Man, CLAY CENTER, NEBR.

Fireside Social Chats

By Aunt Sophia

I BEL'VE I shall do what I suppose every other woman has done who has had charge of the feminine department of a publication, and start something about the rights and privilege of man and wife in the finances of the house. It is an old but very popular topic, this "who carries the key to the money box?" It has been a rock in the matrimonial sea that has shipwrecked many a home-craft, from the humble cottage in size to the mansion. And it has made suffering of soul in innumerable other homes that held together.

Not many women willingly ask for every cent of money they need to expend in keeping up the household. It is not right that any sensible woman should, and women are surely as sensible as men. The woman who has a share of the income to bank in her own name, providing for her household from her own funds, is usually the woman who takes the greatest care and exercises the greatest judgment in her expenditures. The income should be divided, in a fair manner, according to the needs of the husband's business and the wife's household. When money is received, then should the division be made, the wife getting her share, putting it in a bank in her own name. May we not hear from some of our friends who have adopted this system, or a better one? Tell us how and when you came to adopt the plan, and how it has succeeded.

You who have both sons and daughters, do you ever go and compare the rooms of each? Has the boy as good, comfortable a room as the girl? Or do you think any corner big enough to hold a bed is all the "room" the boy needs. Possibly you think the boy will not take an interest in a nice room, well furnished. Boys are not good

housekeepers as a rule, it is true, but because of that very fact, shouldn't you take some extra pains on his account? Many a boy is not much more than an outsider in his own home. Possibly that is the one chief reason why some boys find their chief pleasures elsewhere. Make the boy's home as comfortable and cozy as you can. Give them good rooms, well furnished, and then help them take care of them so their rooms will always be a cheery place for them, where they can find genuine enjoyment. You will not only be helping your boy, but you will be doing a most kindly service to somebody's daughter who will some day become your son's wife.

Read the wise little note from Pearl Chenoweth on the important subject of baby's digestive ills. And I feel strongly that it is true, every word she says. My only grandchild, a bright little fellow of 2 years, is sleeping alongside his grandfather because he ate rich sausage. Babies' health and life depend on their food, so be careful.

AUNT SOPHIA.

THE BABY

An awakening is taking place in the civilized world in behalf of the baby. It is going to be a bright day for his majesty when mothers everywhere realize that the mere process of teething is not responsible for any disorders of digestion, but that they themselves cause them by allowing a heterogeneous and unsuitable diet during the early months. The child needs and should have no food but milk during its first year. The second year it may be well nourished and at the same time kept perfectly well by the following diet: Juices of peaches, prunes and oranges; beef juice, scraped rare beef, long-cooked oatmeal, graham crackers, soft egg yolks, nonstarchy breakfast foods with cream and sugar, baked apples and milk.

The child kept to this diet and given abundant fresh air and sunshine, in addition to cleanliness, will not, can not have cholera infantum or other dreadful ills which make the "second summer" so much feared.—Pearl Chenoweth, Jennings, Kas.

HOME-MADE CEDAR CHEST FOR MOTHER.

Mrs. W. C. Palmer.

The boy who is handy with his tools can make his mother a chest that will protect clothing, furs, hats, etc., from destructive little clothes-eating moth.

All that is needed to make this chest is a dry goods box of the desired size, a pair of pliers, a hammer, a generous supply of brads and cigar boxes.

With the pliers separate the little boards carefully and remove the small nails.

Line the box with these small boards, using care the while to have them fit as snug as possible over the bottom and sides and corners. Line the cover the same way and fasten to the box with hinges and a clamp to hold it down firmly in place.

The result is a good home-made chest for almost nothing but the labor it took to make it and the trouble it took to get the boxes.

The cigar boxes are made of cedar and the odor of the tobacco in the cigars combined with the odor in the cedar makes the very best protection for clothes against the moth.

Then mother will not find the odor hard to get out of the clothes. A few hours in the air and sunshine removes all traces of the odor from the clothes.

What to Wear and How to Wear it

With reference to materials, figured goods are preferred to plain, but self figures in woollens and delicate rubbed patterns in silk. Crepe surfaces are preferred to all others and later will be found even in cottons.

Ratine is a material which wears well and which is liked, and it is made in brocade effects at no great cost.

Blue is to be the leading color and it will be figured in self tone or in one a little darker, perhaps with a satiny ground.

Description of Patterns Illustrated on Next Page

No. 8238-T—Bow Set

A pretty set of bows which meet the new requirements is shown in No. 8238-T. These are hand embroidered and may be done in colors or in all white. The solid white has the advantage that it can be used with little ribbons of different shades according to one's waist.

No. 6516—Ladies' Costume

The general style in dresses is loose and graceful, with long lines of drapery even when there is very little, as is shown in the costume at Figure 6516. This has the very loose blouse that is now the rage, the material bagging under the arm where the sleeve is arranged in one with the bodice. The surplice closing is practically universal and the Medici frill finishes the open neck. The skirt of this dress is a one-piece design, closing in front and with a little fullness at the top. No. 6516 is cut in sizes 34 to 44 inches bust measure. Medium size requires 4 yards of 44-inch material.

No. 5944—Ladies' House Dress

The loose lines which are so attractive in a dressy frock would be a nuisance in a house dress worn when one is more or less actively occupied, and therefore trimness of effect has been sought in the frock shown in No. 5944. This has a neat bodice, fitting the figure and closing at one side. It has an extra wide armhole and the upper edge of the sleeve is also enlarged to fit in without gathers. It may be made full length or shortened to the elbow. The skirt of this dress has four gores, a side front closing and a reversed box pleat in the back. It may have the high or regulation waist line. No. 5944 is cut in sizes 32 to 40 inches bust measure. Medium size requires 4½ yards of 44-inch material.

No. 6397—Ladies' Blouse

Keeping to the idea of looseness, the blouse shown in No. 6397 is a very desirable one. The plain back is extended forward

TERRIFF'S LAST and most perfect INVENTION

The New Gravity Washer

The master effort of a lifetime devoted to the study and manufacture of Washing Machines. It is an undisputed fact that Wm. W. Terriff invented and put on the market more and better washing machines than any other man. The New Gravity Washer was his master piece. It will wash anything from a pocket handkerchief to underclothes and the heaviest bedding perfectly clean, and the gravity principle makes it run so easily that a child can operate it even with a heavy load. The last year of Mr. Terriff's life was largely devoted to writing his biography, which he published under the name of "Twenty-Four Years Hustling in the Washing Machine Business Under Two Flags." We will send you this interesting and instructive FREE and tell you how you can get your first washer without costing you a single penny. Don't delay—write today to **WOLVERINE WASHER COMPANY, 221 Canal St., PORTLAND, MICH.**

 this complete 35-piece Embroidery
 Transfer Outfit for a NEW three-
 month trial subscriber at 10 CENTS.

This offer may not appear again.

UP-TO-DATE FARMING, Indianapolis, Ind

What is Now the Fashion

Pattern Descriptions

(Continued From Page 14)

to form a straight, square yoke. The fronts
 are gathered where they join the yoke and
 may close in surplus style or with the regu-
 lation shirtwaist box pleat closing. The
 neck is trimmed with an ornamental collar,
 attached to small revers, and a very loose
 sleeve completes the blouse. Such materi-
 als as crepe de chine, messaline, voile and
 the like will be ideal for this waist. The
 pattern is cut in sizes 34 to 42 inches bust
 measure. Medium size requires 3 1/4 yards
 of 36-inch material.

No. 6364—Ladies' Skirt

One of the favorite skirts for practical
 purposes is the pegtop, which fits snugly
 at waist and foot and flares a little at the
 hips. This shape will hold throughout the
 summer. A good example of it is shown
 in No. 6364. This has two pieces and is
 made with flat back and front. It may
 have high or normal waist line as preferred.
 Plaid materials are in great favor at pres-
 ent and the darker shades are very rich
 and serviceable. Besides, they require no
 trimming except, perhaps, a few buttons.
 The skirt pattern is cut in sizes 22 to 30
 inches waist measure. Medium size re-
 quires 2 3/4 yards of 44-inch material.

No. 6421—Dressing Sacque

A pretty dressing sacque for morning wear
 has the ever-present kimono shoulder and
 surplus closing. It is cut in one piece,
 but may have a seam in the back if the
 material be narrow. The pattern is cut in
 sizes 34 to 42 inches bust measure. Me-
 dium size requires 3 1/4 yards of 36-inch
 material, for sacque and cap.

No. 5917—Work Apron

A work apron which may answer for a
 dress, if desired, is shown in No. 5917. It
 closes in front and is held in at the waist
 by a belt. It may be high or low in the
 neck. The pattern is cut in sizes 32, 36, 40
 and 44 inches bust measure. Medium size
 requires 5 1/4 yards of 36-inch material.

No. 6385—Child's Frock

In the remaining designs the children are
 well taken care of. Beginning with the
 little daughter, there is a pretty frock shown
 in No. 6385. It is a sacque design, no
 division of waist and skirt, and it also has
 the kimono shoulder. At the low neck
 there is a little shield with turnover collar
 attached. The pattern is cut in sizes 6, 8,
 10 and 12 years. Medium size requires 2 1/4
 yards of 44-inch material.

No. 6399—Boy's Russian Suit

For a little boy there is No. 6399, a
 Russian suit with a low front closing, show-
 ing a deep vest. There is also a wide collar
 and plain sleeves tucked at the wrist.
 Bloomers are provided with this suit. The
 suit pattern is cut in sizes 2, 4 and 6 years.
 Medium size requires 2 1/2 yards of 36-inch
 material.

No. 8215—Baby's Cap

For the baby we offer a cap, No. 8215.
 This is entirely plain, with a center disc
 in the back. It will depend for its beauty
 upon the material used and any needle
 work added. The pattern is cut in one
 size. The transfer pattern for the em-
 broidery design is 10 cents.

These patterns are guaranteed;
 there are none better at any price.
 Full directions accompany each. Give
 number and size. Write your name
 and address plainly.

Price of Patterns, 10 Cents Each

Dear Reader:— Listen to Me!

YOU may believe every
 word I say. If you will,
 the time you spend in
 reading this advertisement
 will be the most profitable
 period of your life. I can put
 you in the soap business where
 you can easily make \$150.00 per
 month. Any bright man or
 woman can make more money
 working for me than in any other way. I
 have hundreds of agents making \$2,000.00 a
 year. I have always been in the agency
 business, myself, and I know it from A to
 Z. I will teach you how to make sales and
 make you successful. I have made money in the
 agency business, and many of the agents I have
 taught have made their pile and retired.

I now have a much better proposition than ever
 before—one that makes my agents more money,
 and I like it better myself. The reason my agents
 have been so successful is that I do not handle
 junk, tinware or cheap John goods of any kind
 that never lead to repeat orders. I do not pay my
 agents with premiums, but they get hard cash and
 soon have money in the bank. It is repeat orders
 that make money in any business. Go into any
 home on Monday morning and you will find them
 washing; go to the neighbors and you will find
 they are washing too. It is the same thing all
 over the country. The demand for soap is unlim-
 ited, and repeat orders never cease. Now, what
 does this all mean? It means that someone is
 getting the enormous profit from your territory
 which should be yours.

There is big money in the soap business and I
 give my agents the big end of the profit—a profit
 so large that I hesitate to state in this public
 manner what it is, but will be glad to advise you
 confidentially when you write me. Suffice it to
 say for the present that you will be satisfied. I
 can give you a chance to make such a big profit
 that you will be more than satisfied with your
 income and willing to stay with me year after
 year and be one of my loyal representatives. I
 personally teach every agent how to make money
 and make it fast. My plan has been a great suc-
 cess, and I will give it to you FREE. Now, I want
 to say to every man or woman who is anxious to
 make money and better their condition, write me.
 Don't lose a moment's time, but write me at once,
 and address your letter to **JOHN B. HECOX,**
General Manager of the Wolverine Soap Company,
218 Water Street, Portland, Michigan.

FEATHER BED BARGAINS

Queen 1914 Model Incubator

Simple, honestly built, self-regulating. "Temperature did not vary more than one degree during entire hatch," says W. H. Gray, Canfield, Ohio. See the low-priced 1914 Queen. You cannot buy an incubator, at any price, that will do better hatching for you. Send for free catalog now.

QUEEN INCUBATOR COMPANY BOX 19, Lincoln, Neb.

Garden and Orchard

PREPARATION AND USE OF SPRAY FORMULAS

By G. M. Bentley

Insecticides are substances which kill insects. Fungicides are substances which destroy fungus diseases. When insects and fungus diseases prevail upon the same plants insecticides and fungicides may be combined and the two results gained from one application. Variable results have been obtained from the use of insecticides and fungicides, due largely to climatic conditions and to the quality, age and preparation of the ingredients used and the combinations made. A knowledge of the pest being treated and the nature of the plant infested is an important consideration.

For remedial treatment, insects are divided, according to their manner of feeding, into biting and sucking groups. Hence, in the economic application of insecticides, a knowledge of the mouth parts of insects is essential. To obtain this one has only to notice carefully the damage being done or study the insect and observe whether its mouth is provided with jaws for biting (chewing) or a beak for sucking. Until a distinct familiarity with insect anatomy and general classification is procured it may be better to send specimens to the state entomologist for identification and remedial suggestion. Specimens should be accompanied by pieces of plants upon which they feed, and, if possible, some samples of the character of the damage done.

Paris Green (dry)

Paris green, 1 pound; flour or land plaster or slaked lime, 20 to 50 pounds. These should be mixed thoroughly. The best results will be obtained if applied while there is dew on the leaves.

Arsenate of Lead

Acetate of lead (sugar of lead), 12 ounces; arsenate of soda, 4 ounces; water, 50 gallons. Put the arsenate of soda into a wooden bucket with 2 quarts of water. Put the acetate of lead into another bucket with 4 quarts of water. When these two are dissolved, mix well with the water and spray.

Arsenate of lead (made as above), 2 to 5 pounds; water, 50 gallons. Arsenate of lead is also used with the Bordeaux mixture instead of the Paris green.

Arsenate of lead will not burn foliage, it mixes more readily and is held in suspension longer than Paris green. Prepared arsenate of lead is much more convenient. This comes in the form of a thick paste, which can be readily reduced to the proper strength. Arsenate of lead also comes as a powder, in which case it is dusted on at full strength.

FROM A GARDENER'S NOTEBOOK

Apples succeed best on a clay loam. Good fruit can be grown on almost any kind of soil.

A hilltop or hillside looking south is best for a vineyard.

Success in spraying is a question of method and material.

The right location accounts for a lot of the success of some fruit growers.

The hotbed should be prepared now and put in good shape for the seeds of early plants.

It is time now the business of pruning was completed. If you have not finished, do so with a rush.

You can add to the capital stock of your farm by putting good tile drains in the wet places. Good drainage is a necessity in good farming.

Either the Paragon or the Stone are top-notch varieties for dependable crops of tomatoes.

Be sure you get some good popcorn seed and save a rich spot for it. The same P that begins popcorn spells pleasure.

Sunflowers thrive in good, rich garden soil. Plant a row of them. The poultry will pay you good prices for the seed.

A hand spray pump is a very handy tool to have about. Get a good one while you are about it, and give it good care.

The Ben Davis apple should have been named Zachary Taylor. Why? Because it is of a "rough and ready" character.

Sort over the potato seed early and look out for disease. Don't forget to treat the tubers to a formalin bath just before planting.

Get your orders in now for trees and vegetable plants to be used this spring and see that your nurseryman and seedsman are A No. 1.

Those north of Mason & Dixon's line should prime grape vines during this month. February is the right time for grapes, March for berries.

A good well and a gasoline engine can make a garden grow right through the long spells of dry weather which come with nearly every season.

Every farm should have an excellent fruit and vegetable garden, so the home may be well supplied with plenty of fruits and vegetables the year around.

Every one likes asparagus, yet few have it. Buy 100 roots this spring and put out a bed. It is easy to sell a surplus of fine asparagus at a good price.

In Boston they've put the "boy scouts" on vacant lots to teach them how to raise vegetables. They can thus use their scouting ability in hunting potato bugs and chasing the cabbage worm.

To succeed in fruit growing one must spray, and to spray right one must know exactly what he is doing. No guesswork succeeds, except by accident. Get posted.

If you have wild cherry trees near your orchard, cut them down and use them for firewood now while firewood is needed. Cherry trees are great harbors for worm nests.

Fetches Big prices by ripening in May. Large deep red, delicious. Fruits freely at 2, heavily at 3 years old. Carefully bred cross between early ripener and late persistent bloomer. Enough blooms always escape frost to make full crop.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

UP-TO-DATE FARMING is in truth "a paper with a mission," and in that feature it is different from all other papers. Its mission is to build up and make better. Its field is the world, and the object of its solicitude and hope is the human race. But our work is specially directed to the improvement of agricultural conditions, and our unfaltering purpose is to help the farmers in their heretofore one-sided struggle, in a business sense, with the rest of the world. In this we feel that we are helping everybody else, and in its accomplishment we see before us a great work of education. That sends us to the young people as well as to the old—to the brightly developing minds that, like the glowing rays of a rising sun, portends a more brilliant day. The letters written us by the young people of every portion of this great country not only promise but guarantee a brighter future, and our only sorrow is that, because of the other fields we must cultivate in the accomplishment of our great purpose, we can not print them all. Equity, equal business opportunities and advantages for all is the unfading star that leads us on, and our great army of Cadets of Equity, learners and students of those important

truths, bring us confidence and hope. We feel that they will do their best to help us, and when they grow into leaders of sentiment and action the world will enjoy their more profound thought and nobler purpose.

What better can we do this time than to begin with this letter from a place in Pennsylvania around which clusters some dear historic memories? I suppose that is the mill on his way to which Washington contracted the cold that resulted in his death:

DEAR CADETS—I am a country girl and will be 16 years old March 19, 1914. I think UP-TO-DATE is a fine farm paper, and I enjoy reading the Cadet letters. I attend school in Perryopolis, and my sister Lila Belle and myself will graduate from it this spring. I like to work as well as to go to school, and there is lots of it to do on a farm. I help father with the farm work as well as mother with the house work. I have two sisters older than myself and two brothers younger. Perryopolis is a small town and is noted for historic buildings and surroundings, among which I may name the old state bank, the old Quaker church and cemetery, and the Washington grist mill that was built by George Washington in 1776. There is a large dam which forms a waterfall that runs the mill. The run that supplies this water also bears the general's name, and we have the Washington Coal and Coke Company, the Washington Run railroad and the Washington cemetery, but the latter are more modern than to date back to Washington's day. My home is a mile and a half from the town and I will answer all view cards with views of the buildings I have mentioned and others.—Reba J. Lynch, Perryopolis, Pa.

UP-TO-DATE is a favorite in Ohio:

DEAR CADETS—I am 14 years old and my father lives on the same farm where I was born. I go to town to school and ride a wheel. My brother and I have two pet lambs that know almost everything we say. My father has taken UP-TO-DATE FARMING for about fifteen years, and we all enjoy reading the Cadet letters as well as the rest of the paper. Father says he would not be without it, because he thinks it is the best farm paper published.—Violet Suhr, Norwalk, O.

Many Cadets will recall the case of friend George Alderson, a cripple, whose life has been cast in hard lines. His new chair has made his days brighter and his sleep sweeter, and he writes to express his joy and thankfulness to the Cadets who have helped him with words of kindness and cheer:

George Alderson, the Crippled Cadet, and His Chair

DEAR CADETS—As there was an appeal to the Cadets in UP-TO-DATE FARMING for aid to get me a rolling chair, and as I am so glad to say I have it, I want to thank the liberal-hearted people for their aid. I don't think we may meet on earth, but may we meet in that happy place where Equity, joy and peace are forever and ever more. I am crippled for life. But I am so thankful that I can move myself about. Those who contributed to my joy may want to see my photograph in my new chair. May God be as good to you as you have been to me.—George Alderson, Hall, La.

Suppose we open the door to this young poet from Washington?

DEAR CADETS—I'm a boy of seventeen And live right on the farm; It's the best place I've ever seen To keep a boy from harm.

I live in the state of Washington; The climate here is fine; The crops we grow I'm sure there's none Surpass them in their line.

I like to read the letters. And think them very nice, Because we all are fretters— Keep fretting 'bout the price.

I'd like to be a Cadet; I think that, too, is nice; To sell our stuff and know we'll get An equitable price.

This letter, then, will let you know I like dear UP-TO-DATE; And now I'll ask you leave to go, For it is getting late. —John Rice, Vancouver, Wash., Rt. 5.

Nearly all countries have advantages and drawbacks. What would the farmers in many of our states think if they had to dip their cattle?

DEAR CADETS—I am what people call a "cowpuncher," and am at present working on a ranch in the west end of Cimarron County, Oklahoma, in what are called the cedar brakes, which are hills and canyons, the hills being solid rock covered with cedar and pine timber. Within the last few days I have helped dip 400 head of cattle to kill the lice on them. We also vaccinated 100 head against blackleg. I am 19 years of age and like to read the Cadet letters, and would like to exchange letters and cards with the Cadet boys and girls. I will promptly answer all I receive. —Charles R. Moyer, Kenton, Okla.

DEAR CADETS—I am a country girl, 16 years old, and have three sisters and two brothers. I live with my parents on a fruit farm, where we raise peaches, plums, pears,

\$25 FOR A NAME FOR THIS PONY

I WILL give \$25.00 FREE for the best name for a beautiful prize Shetland Pony. Send the best name you can think of right away, for not only do you have a chance to win the \$25 prize, but

You Can Win the Pony Too

for I am going to give him to some boy or girl who will do a little easy work for me. I have just given "Dandy" and "Patches," other beautiful ponies, and now I am going to give away another pony. But first I want a name for him. Just as soon as you send me a name for the pony I will tell you all about my great offer and I will also send you a special coupon good for 1500 free pony votes. Remember, I will give \$25 for the best name for this pony, and I send you 1500 free pony votes and full particulars about the pony as soon as I hear from you. Only one name from each family accepted. Write me today.

A. M. PIPER 965 Popular Bldg., Des Moines, Ia

cherries, apples and quinces. Our orchard comprises 23 acres. I keep house for the whole family, for my mother is not well and my sisters are too young to help me. I love to read UP-TO-DATE FARMING and find it very interesting. My father likes to have me read it to him evenings. I would like to exchange letters and cards with any of the Cadets that will write to me.—Dora Acquistapace, Rock avenue, San Jose, Cal.

Here we have quite a newsy letter from Nebraska, where so many people read UP-TO-DATE:

DEAR CADETS—I am a Nebraska girl, 17 years old, and my father has been a subscriber to this paper for several years. There are five in our family, and I am the only girl. I live on a 160-acre farm, two and one-half miles from town. My oldest brother is married and lives on our other farm of 320 acres just three miles from our place. My next oldest brother joined the navy almost two years ago and is now in Washington. He has been to South America and has seen the Panama Canal. My other two brothers, one older and one younger than myself, are still at home. We have two little gray Indian ponies that I drive to school. My oldest brother at home has an Indian motorcycle with a back seat, on which I ride sometimes. I am a senior in the high school, there being fourteen in the graduating class. I study literature, geometry, Caesar, ancient history and botany. Every morning except Friday we have a half-hour singing period, and on Friday morning each gives a current event. I would like to hear from all the Cadets and will do my best at answering.—Elizabeth M. Lichty, Carleton, Neb.

Good-by. A month of the year is now gone and I trust a month's real progress has been made by each of you.

Hunting and Trapping For Pleasure and Profit

Our next issue will be our last for this season. The farmers are getting ready for spring and summer work and the other editors say they want our camping ground for a garden spot. As there's nothing much to do but wish the winter had been longer and a bit kinder, I reckon we might as well divvy up the spoils and hike. But we'll all have one more round before the fire dies out. Next issue Bob Snow will tell how he came out with his fox traps, and then, as master of ceremonies, your humble servant will give you boys a little token of appreciation as we part.

TIM.

REMINISCENCES OF BOB SNOW

Bob Finds Fox Dens, but Loses a Bet

For several days, as I passed by a certain creek when "running" my trap line, I had noticed a well-beaten rabbit trail leading up it. This creek led

Bob Snow on the Trail

into one of the wildest parts of the woods and I had long intended exploring it, but the "line" kept me busy and I did not carry out this intention. One day, however, not making a single catch, I packed up a dozen traps and some grub and, buckling on a heavy .32-caliber Colt six-shooter, I left for the creek. I reached the place in due time and took up the rabbit trail. After following it for about a quarter of an hour I stopped to rest and get my bearings. The land was becoming rougher and higher. The creek bed was rocky here, and at two places water falls of considerable height occurred. I could see where the rabbit trail led up a little rise and disappeared down the other side. I walked up the rise

and looked over into a little basin-like depression in the land. On the opposite side was a high bank to which the rabbit trail led. Upon closer examination I found several holes in the bank which were occupied by rabbits. Deciding that there was nothing of more interest than rabbits in the vicinity, I left the creek and entered the woods and tramped around for half an hour without seeing anything unusual until I happened to see a little opening in a bluff. Upon examination I was surprised to find fox hairs clinging to the sides and three well-defined paths leading from the entrance. I got busy at once and set six traps around the hole. The traps had not been smoked or otherwise treated to have the iron smell removed, but this is not always necessary, though I would advise trappers to prepare traps beforehand if possible. After setting the traps I left for camp. When I came out of the woods in front of the "shack" Chief was cutting wood, using the doorstep for a chopping block. I had spent a good half day making that step and I made haste to remonstrate. Chief politely listened to me and agreed to cease such damaging stunts, but I saw that he had cut about all the wood he wanted. At that Chief's an accommodating cuss when you ask him to do something he happens to be thinking of doing anyway. We went into the shack. We cooked supper, ate it and cleared up the dishes in a very short while. When we were sitting around the fire I broke the news of my find to Chief. He seemed to have doubts regarding the fox tale and promptly wanted to make a bet that I would not catch so much as a mouse in the trap I had set. I declined to bet, and then he looked at his watch and said "Well, Bob, you seem to think you found a ten-strike."

I replied with some heat: "When the dickens did you ever have anything better to show?"

"Oh," he replied carelessly, "I could find the goods if I wanted to."

"Then," I replied, "suppose you find a fox den or a lion's lair or an elephant's nest if you're so all-fired smart."

"Would coon answer the purpose?" asked Chief.

"Well," I replied, "provided you bring the coons home I guess they'll do."

"I can go out now and within ten minutes bring a couple back," asserted Chief, and, glancing at his watch again, he slipped on his coat, took his rifle and started for the door.

"Here, wait a second," I called, "was you talking about betting awhile ago?"

"A good pair of socks against a pair of mitts," he answered.

"That's a funny wager," I said, "but I'll take it. Remember two coons will be enough; no use killing 'em all in one night."

When Chief had gone I settled back in my chair and took out my watch. It was exactly 8 o'clock. Six minutes after 8 I heard two shots ring out. At nine after 8 the door opened and Chief came in. Over his shoulder hung two big coons.

"Chief," I said, "I hereby swear off all betting with you. You've got luck tied to you with whang leather. How'd you get 'em?"

"This evening," said Chief, "when I was coming back from the traps I saw a coon run into a hollow tree back of the shack. I went up and looked at the tree. It had but one hole, near the butt. I was about to rout mister coon out when I decided to wait till I had made a bet with you." (Here he grinned and eyed my favorite pair of mitts lying on the table.) "I'm glad I did, for you proved to be as much a sucker as ever, so tonight when I hiked out I just cut another hole above the first, and as the tree was hollow only for a few feet I had no trouble in punching my coon out with a stick and another one besides, and there they are. Right good pair of mitts these, Bob."

(Concluded Next Issue)

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.00; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.
C. Hayes Taylor, Indianapolis, Ind., treasurer.
A. Y. Satterfield, Sterling, Idaho, national organizer.
S. W. Morris, Rochester, Minn.
C. B. Lozier, Robertsdale, Ala.
J. Harris Lenker, Sunbury, Pa.
David Holmgren, Tremonton, Utah.
Wm. Grisenthwaite, Oregon City, Ore.
A. O. Weber, Geneva, Neb.
O. E. Scott, Pocatello, Idaho.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, William Grisenthwaite, Oregon City.
Secretary, F. G. Buchanan, Oregon City.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Gulf Coast District

Florida, Georgia, Alabama, Mississippi and Louisiana—
C. B. Lozier, District Manager, Robertsdale, Ala.

A little later the second tier of producing districts for potatoes, Virginia, Tennessee, Arkansas, Oklahoma, etc., has its crops ready. The same condition of local organizations and exactly the same troubles are experienced, and if the crop is a good one unsatisfactory results are reaped.

And in the fall and winter the heavy producing states of the north claim the market. Again we find the same conditions as regard organization, blind direction and fierce competition, with just as unsatisfactory results. There are hundreds or thousands of local organizations, but they are absolutely unable to get away from the ruinous competition that destroys profits to the growers but make the ideal conditions for the long line of distributors to exact their handling and storage tolls. And it is the same way with all of the other crops. Beginning in the Gulf Coast District and coming north, the different sections producing vegetables, fruit and grain and cotton cannot co-operate with each other as now organized. It is perfectly clear that a local organization, or even an organization for a district doing business alone, can not hope to completely solve the marketing problem for its community or district.

Then what is needed?

The organization to successfully handle the marketing of farm produce must be a comprehensive one. The Farmers' Society of Equity recognized this fact years ago when it declared for one organization, one marketing system, one central clearing house for the whole country, for all of the farmers, for all of their crops.

The Farmers' Society of Equity and this paper have certainly been faithful in teaching this doctrine and in organizing the farmers with that end in view, and in establishing such a system. We have through these columns and in other ways expressed in strong language the absolute inadequacy of fragmentary co-operation and as persistently pointed out the necessity for National Co-operation and have shown so clearly that no person could make a mistake, how these things can be brought about. All of this time we have, day after day and year after year, been actually building such an organization and establishing such a business system, and for the last year have had such a system partly in operation to the immense benefit and advantage of thousands of producers.

The organization of the Farmers' Society of Equity has gone far enough, and its marketing system—the Equity System—has been tested and proven beyond a doubt that it is sound and will do what is claimed for it. Being convinced of these things the last annual convention of the Farmers' Society of Equity, being the fifth annual convention, took what we believe are the necessary steps which now make it easily practical for all organized bodies of farmers to IMPROVE their methods of marketing and make their organizations BETTER, as Secretary Houston says is the thing needed.

One important step was to provide ways for federating present local associations for unity of marketing with the Farmers' Society of Equity. The convention's action is expressed in Article X of the amended by-laws of the Farmers' Society of Equity as follows:

Any established local farmers' association, having as one of its objects the marketing of crops, may federate with the Farmers' Society of Equity on terms prescribed by the board of directors of the national clearing house. Such federated associations shall have the same representation in meetings of the higher clearing houses and unions, and enjoy all the benefits of the marketing system, as full local clearing houses of the Farmers' Society of Equity.

Better Method of Price-
Making and Marketing

By the President of the F. S. E.

It is universally admitted that we have arrived at a place where agitation and propaganda for greater production in agriculture has given way to an acute need for a more rational way to market what we do produce.

Most farm produce is grown now in sufficient amount to supply all needs. And oftentimes there is such a quantity of some crops that the prices paid are ruinous to the producers.

Notwithstanding this, or regardless of how large the crops are, or how low the prices are to the producers, or how much of the crops waste in the field, or orchard, there is a constant wail from the other side that the demand is not fully supplied, while the prices to the consumer is usually oppressively high. Because of these anomalous conditions the people have gradually arrived at the conclusion that what is needed is a new marketing system. The thought today is turning more to giving agriculture a satisfactory sales department or marketing system. This is not a new thought with this paper. But it is comparatively a new thought, or a new conclusion, reached by most other farm papers and farmers' institutions.

Former Secretary Wilson rarely said anything about marketing crops, but the Department of Agriculture under his administration and former administrations was exerted exclusively to greater and better production. Present Secretary of Agriculture Houston says, regarding the conditions referred to above "The condition is undoubtedly a marketing problem, which will have to be solved by BETTER organization of farmers and IMPROVED methods of marketing."

And the Secretary voices the thought of every present farmers' organization and all of the unorganized farmers. Organizations that farmers have had were not able to cope with the problem of marketing and the call is for a better organization. The marketing methods used heretofore were not correct, and were not sufficient, as the conditions that obtain in this day are proof. The question then arises, is there a plan for a better organization? Is there an improved method of marketing ready

to be used? Let us make the questions still broader. Is there a plan before the people that farmers can adopt and on which they can build a sound and permanent organization? Also is there a successful marketing system, a practical business system, that can be fitted to such an organization?

The weakness of the present organizations is in the fact that they are local in their character. They undertake to do marketing for the producers of a community or of a limited district. Each one has its own little zone, and each one naturally comes in competition with all of the others, where the same crops are produced, when it comes to marketing. As there are hundreds or thousands of them marketing the same crops at the same time, it follows that there is not a systematic direction of the marketing, but markets are over-supplied or under-supplied. It is evident then that an organization that will solve the marketing problem must be a comprehensive one, one that will overcome this condition of competition among the different organizations as the different local organizations have attempted to overcome the competition in marketing by their members.

To illustrate: The first early potatoes are grown in the Gulf Coast District of our country from Florida to Texas. The growers are now organized in local associations. These local associations have from a few to many members. Each association has its business manager, whose duty it is to market the potatoes of the association. Each business manager is expected to find the best market and to beat the neighboring organizations to it. Rarely is there any attempt at co-operation among these local associations. But frequently there is fierce rivalry. No one association knows what its neighbor is doing or where they are shipping to. Much less do they attempt to know or have they any facilities for knowing what associations that have early potatoes to market are doing in the other states. The result is a chaotic condition and the returns to the growers under such conditions are dependent on the mere elements of chance, in finding a profitable market and in getting honest returns.

of Equity are now charged with the duty to make federating equally important with organizing new local clearing houses. For their information and the information of others, we give these instructions:

—O—
If there is a local association established now at a marketing place or shipping point that will federate for unity in marketing, it is recommended that our organizers do not organize a new local there, but that all of the producers, not in the established association, do now join with that association on its regular terms. Also if there are two or more associations at one place, presumably representing different crops, the thing to do is for them to combine so that there will be just one association for all of the crops and for all of the producers, as is the plan of the Farmers' Society of Equity and which has proven to be the correct plan. After thus combining, the next step is for them to enroll all of the outsiders or as many as possible on terms of their own making. In event that it is impossible to federate the present association for co-operation in marketing then organizers of the Farmers' Society of Equity are instructed to organize a local clearing house of the society at such place and invite the members of the other association to become full members of the Farmers' Society of Equity and through the Farmers' Society of Equity clearing house and get the benefits of our national system of marketing.

—O—
It will be seen from the above declaration that the Farmers' Society of Equity does not attempt to tear down established organizations, but rather by opening up to them the national system of marketing. The membership of such association can be greatly increased because of greater efficiency of the local associations and the increased benefits that the members will receive. Also the terms made by the last convention and our Board of Directors for federating are equally liberal with the policy of helping established locals to build up their membership rather than to attempt to take it away. The terms, with full instructions for organizing, are supplied to organizers and others interested on request to the National Clearing House of the Farmers' Society of Equity and associations federated for marketing, Indianapolis, Ind. There is evidence already that the federation plan is going to meet an existing need in the number of federations being reported. One of the largest is the Oneida Farmers' Union of Malad City, Idaho, 396 members, federated January 23, 1914.

—O—
We mention some of the farmers' associations that can advantageously federate on this plan: Any independent association; any local association even though it is affiliated with a district or crop association; any local union of a national farmers' organization; any local farmers' elevator, which is independent or a part of a state or district farmers' elevator association; the local granges, or farmers' clubs, or of any other farmers' society or organization. In equipping these local associations, local unions or local bodies, with the Equity System of marketing which is a national co-operative system, they immediately become possessed of greater interest to the members and they immediately come in a condition to render greater service and deliver more benefits to their members in this way. The federation brings an element into the organization that will make it possible for them to increase their membership and organize new local units much more rapidly than they have been able to do without it. Here again the federation idea is not to antagonize or to injure any present farmers' organization, but rather to supply it with what it has lacked in the past, and which can be made of the greatest value for the upbuilding of such organization, whether national, sectional, district or local.

We have been thus explicit in explaining these matters because we are writing this as an answer to many inquiries that have come to this headquarters, and in anticipation of like questions that will be coming up in the future and for the information of such people as may not have given the matter any particular thought.

—O—
Having thus explained how the federation is being brought about, the reader will like to know more about the Equity System of Marketing as it is being operated.

—O—
Let us repeat what we have frequently said before in these columns, about the operation of the Equity System of Marketing:

—O—
The member of a local association reports to his business manager what he has to dispose of. This, understand, comprises both the local clearing houses of the Farmers' Society of Equity and federated associations which now stand as local clearing houses as far as marketing is concerned. The manager of the local clearing house then, instead of seeking the market for the produce, reports the crops of his members to the next higher clearing house. This may be a county clearing house, or a district clearing house or a section clearing house, or if none of these, then to the national clearing house. All of this is explained in the literature of the Farmers' Society of Equity. If it is reported to a county, district, or section clearing house, such clearing house will co-operate with the national clearing house in making the sales and in directing the marketing, along lines and following out plans that have been decided among them. As a part of the Equity System of Marketing there are selected representatives on the principal markets that are under contract to the Farmers' Society of Equity and

associations federated for marketing, to buy or handle the produce on the most favorable terms to the organization that could be made. These representatives are bonded, whenever it is deemed necessary. Also the national clearing house has agents that call on the representatives frequently to check over the business, audit the accounts and give personal attention to complaints and claims of its members and subordinate clearing houses.

—O—
To illustrate the actual workings: Taking again the Gulf Coast District of the country, as far as the organization and federation extends, the producing communities are brought into full co-operation with each other. As far as the organization and federation extends competition in marketing is at end and the produce, no difference what crop it is, of all the members is directed to the market with an intelligence that can only be arrived at when all of the produce is known at one central clearing house, where the demand can find it. Isn't it clear then that just as soon as the Gulf Coast District's organization and federation is completed and practically all of the crops of that section are reported to the central clearing house for marketing, that on that day, when this point of development is reached, the perfect condition of marketing will have arrived for that section? Then, instead of any produce being started out to find a market, the demand will be compelled to go to the place where the authority is given to market the produce. The producers' own prices will be paid and more will be taken and more consumed than under the old system. In fact it will not be necessary to have near all of the produce represented. The buyers and handlers of produce prefer to buy from the central clearing houses than to buy in dribs all over the section. The expense to them is immensely less, while the superior

grading will end many of the evils now existing in the present marketing system.

And what we have explained about the Gulf Coast District applies to all other producing sections of the country and for the whole country.

Of course any system of marketing will cost some money. Under the present system of marketing, where each local or district association is a unit by itself in marketing, it must incur a very heavy expense. We have report of the expenses of marketing of a number of associations where the expense ran as high as 25 per cent of the gross sales. A government department estimated that it cost seven billion dollars to market six billion dollars' worth of farm produce. That is seven dollars for marketing six dollars' worth. While there is no pretense that all of the expense of marketing can be eliminated, yet we believe that it is perfectly safe to estimate that one-third of the present expense can be saved through a federation, such as is now being organized, or a saving of two billion, three hundred million dollars (\$2,300,000,000). Local clearing houses and federated associations are expected to fix their own charges. It is very evident that as the national clearing house does its part, that the locals and districts will be relieved of much expense for telegrams, salaries, traveling expenses, etc., etc. The service on a national basis can be performed at only a small fraction of the total expense, when each association maintains its own marketing system, while the results are much more definite and profitable. The saving that can be made by local and district associations, in this way federated, in many cases will amount to a good profit to the producers.

In conclusion we claim that a local association standing all alone is nearly helpless in marketing. Even district associations are not much better, because there are other districts that "butt" in on the same market and effectively destroy the profits. But these associations in a federation, and using the Equity System, immediately are equipped with the one thing lacking—a definite marketing system that at once reduces competition and in a short time will end it entirely.

Every community feels its weakness under the old plan, but federation immediately brings an element of strength, security and confidence that only a nation-wide movement, a great

national federation and a tangible system for business can give.

Agriculture is very well organized now. Probably four million of the farms out of about six million in the country are in organizations now. Who can fail to grasp the stupendous possibilities that are all ready for farmers to reach out their hands and take to themselves?

Farmers, far more than enough of them, are in organizations now. A successful national marketing system that will end competition, that will positively enable them to be their own price makers, that will find demand for immensely more crops than at present, that will market their crops at a small fraction of the expense now incurred, which represents a good profit in itself, is ready for them to use. An organizing and federating plan is ready for acceptance on terms that involve only a nominal expense. With these things true, how long are farmers going to take to establish their sales department completely? Since we are so well started, why not assemble the thousands of local units around the federation idea and complete the federation this year? Any present organization, so connected up with a thousand or five thousand others all over the country, will command greater respect at once and can get from railroads and others, services that a single association can not get.

We have had the benefactors who made two blades of grass grow where only one grew before. Shall we now recognize and follow the ones who are plainly showing how we can get as much money for the two blades of grass as we formerly got for the one?

We can do it, if you say so.

This paper circulates in every county in the country and in nearly every agricultural community. If YOU will take the lead in this matter, to complete the organization and federation this year in your community, let us know on the below blank and let us co-operate with you.

We can do it, if YOU say you want it done.

Send the blank.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION—We were about ready to organize here when a party asked the question whether the local banks would vouch for the reliability of the officers of the Farmers Society of Equity. I am satisfied with the plan, so will you answer this question?—R. H. Wilson, Brattleboro, Vt.

ANSWER—You are referred to the Union National Bank, the Capital State Bank and the National City Bank of Indianapolis. All officers who handle the Society's money are under bond. The Farmers Society of Equity never comes into possession of any crops but acts in a directing capacity.

Q.—It was one year December 20th since we organized. Is it necessary to organize each year, or what shall we do?—R. E. Harris.

A.—See constitution and by-laws. You perpetuate the organization by paying annual dues of \$1.50. Your dues-paying date is January 1.

Q.—Some of our members want to buy clover seed. Please direct us where to get it.—E. L. Leonard, secretary, Lockwood, Mo.

A.—We have asked parties to quote you. Any members having clover seed to sell should send sample and quote.

Q.—Laurel Ridge Local Clearing House wants to hear from locals in California, Kansas, Oklahoma and Nebraska. Object, exchange of business.—George L. Baker, secretary, Sherwood, Ore.

Q.—(1) There is a merchant in this community who is fighting our local and calls the members anarchists and other names. (2) Also we have a member who acts all right when in meetings, but outside of the meetings he reports everything that takes place to the merchant. What should be done?—Secretary.

Farmers Society of Equity, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

Farmers Interest White Dent Seed Corn

Each corn grower should send for full particulars and price of corn before he lays this paper aside.

You can start where corn breeders have brought this corn after eighteen years of systematic breeding. This is the best-bred corn in the country. No doubt about it. For you to breed up your corn to equal this would require many years of painstaking care and cost of more than a thousand dollars to get a bushel. For a nominal price you can buy seed of this corn to plant your

Twenty Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1908.

1914 crop and you can depend on a big increased yield over any other seed you can plant.

Farmers Interest Corn is the best quality and greatest yielding corn in America. Thousands of customers have enthusiastically testified to this. We print many such letters. Some of them live in your own county. Our seed was never better than this year. Guaranteed. This corn

Ten Most Perfect Ears. First Prize. Indiana State Fair, 1908.

might be called THE ALL PREMIUM corn, because it has almost invariably been awarded the highest prizes wherever exhibited. See some prize exhibits illustrated on this page.

Most Perfect Bushel. First Prize, Open to World. Illinois State Fair, 1911.

Most Perfect Bushel. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1903.

The general farmer can not afford to take the time and go to the trouble of breeding corn like our Farmers Interest has been bred. But he can profit by the years of work of the breeder by planting this great variety. This corn was bred like cattle and horse and hog breeders breed the fine stock that any farmer can get today.

Mr. Corn Grower: The cheapest way and the best way for you to quickly get that improvement in quality and yield of your corn that you are thinking about is to buy Farmers Interest Corn of us this year. An increase of ten to twenty-five bushels per acre in your crop in a normal season can be depended on if you plant this corn. Send for reports from others who are doing it right along with Farmers Interest. REMEMBER, THE EASIEST WAY TO IMPROVE YOUR CROP IS TO LET THE OTHER FELLOW DO THE BREEDING.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

Catalogue free. It will cost you only a post card. A great many farmers must buy seed corn this year, so why not start at the very tiptop of perfection by getting Farmers Interest Seed Corn?

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Columbus, O., 1911.

No other corn has such a record for premiums won. We show only a few of the prize lots. No other corn has such a record for drought resistance this last year and good yields. Send for catalogue and read. Every farmer who plants this corn will reap all the benefits of eighteen years of breeding by the most scientific corn breeders in the country.

Send today, before you lay this paper aside. THE OTHER FELLOW DID THE BREEDING. YOURS TO REAP THE FULL BENEFIT AT SLIGHT COST.

O. K. Seed Store, Desk 2, Indianapolis

This 3½ Foot Telescope Nearly Given Away

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for \$5 to \$8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

Tell Time Two Miles Away

Received the telescope O. K. It is fine. Can see the count house clock two miles away and tell the exact minute.—JENNIE BEERS, Columbus, Ind.

Best for the Money I Ever Saw

I have a word to say in regard to the "Wonder" telescope which I received some time ago. It is the best for the money I ever saw. Would like to know if the price is still good, as my neighbors are worrying me to death about it. I want to order more.—JAS. W. RAINES, Sedalia, O.

A Source of Never-Ending Interest

I have great pleasure in informing you that I have received the "Wonder" telescope. The children, who are forever asking to be allowed to see through it, seem to find it a source of never-ending interest. Please accept my thanks.—CLASSTON C. SWIFT, New York City.

Can See Ten Miles With It

Received telescope last Friday. It is a dandy. Am well pleased with it. I can see ten miles away.—W. E. DICKERMAN JR., Chatham, Mass.

Better Than a \$5 One

I received my telescope in good condition. I think it is better than a \$5 one. I am sending for another for one of my friends and I know of more that want them.—THOMAS MOSMAN, Hafford, Ind., R. 4.

Would Not Take \$10 for It

I received the "Wonder" telescope and it is just standy. I wouldn't take \$10 for it if I couldn't get another one like it.

I can see ten miles with it and can read 2½-inch printing easily a mile away. I can count cattle at five miles.

No farmer should be without one. It would have him many a long walk to see about his stock.—W. A. ESKRIDGE, Ammond, Ky.

Count Windows in House Seventeen Miles Away

I wish all to know how satisfactory the "Wonder" telescope is. Our farm is on the highest point in the surrounding country. From our place we can see with the aid of the telescope over into the Kansas Indian reservation, nearly twenty miles; count the cattle and tell a horse from a cow; can see a large ranch seventeen miles east that can not be seen with the naked eye; can see the color and count the windows with the telescope.—F. G. PATTON, Arkansas, City, Kas.

Finest Thing I Ever Had

I received the telescope and will say it is the finest thing I ever had. I would not take \$5 for it. I think every boy and man on a farm needs one of these telescopes.—CHESTER HOUSEN, Minden, Ga., R. 3.

Our Offer

To advertise the "Wonder" telescope we will send one for only \$1, provided you send 2 names of friends you think will be interested in it. Send 10c extra for ordinary postage, or 20c for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. Full instructions free with each telescope.

A.—(1) That merchant is working his own undoing. The opposition should weld the members together. Merchants co-operate, so why should they not freely grant the same right to farmers. (2) See "Grievances," on page 7 of by-laws, how to handle the case.

Q.—(1) Does a county organization, when it incorporates as a county organization, lose its right to be governed by delegates from the different locals and be governed by a vote of the stockholders of the corporation? (2) If there is any book or pamphlet that will throw any light on the details of the Equity Marketing System, as it now exists and as it is expected to be when completed, I wish you would tell me how to get it.—Purl D. Long, Idaho Falls, Idaho.

A.—See Article V of National Clearing House by-laws. When a county clearing house incorporates it must provide that the directors and the executive committee be selected from the locals as provided for unincorporated county or district clearing houses. (2) The booklet "Crop Rich, Money Poor Farmer" explains the best of anything we have. (Note—See also "Personal" in this number.)

Q.—The last annual convention changed the membership fee from \$2.00 to \$2.50. Now we have some members who signed at the old rate. What shall we do?—C. F. Ridding, Gettysburg, Pa.

A.—Admit them at the old rate.

Q.—Our local has decided to erect an elevator, a coal shed and other facilities for conducting our business. We will not sell stock, but will issue notes or bonds to be held by the members who furnish the money. We will provide a sinking fund, to take up the bonds as they mature, out of the business done. Now the question is, do we have to incorporate?—Local Clearing House, Nebraska?

A.—It will not be necessary to incorporate, but it will be advisable in the interest of the people who furnish the money and all the members must eventually pay the bonds off. We recommend that you consult a local attorney who is familiar with your laws.

Q.—M. R. Leydens, Taintor, Ia., has a car load of corn to sell and will quote price on request.

Q.—Chas. E. Ottoman, Tama, Ia., has one or two car loads of corn to sell and wants offers. He prefers to sell it, but will sell in the ear.

Q.—I notice in our paper where you say western farmers want to buy corn direct from growers. I have a car load to sell and will ship direct if it will pay me. What do you think I can get on the car and who will pay the freight?—Walter Brown, R. R. 24, Jamestown, Ind.

A.—Parties wanting send for samples and Mr. Brown should name his price f. o. b. his station or delivered. Direct dealing should be profitable to buyer and seller.

Equity Field Work

TRUTH IN ITS NAKEDNESS

LACK OF KNOWLEDGE, or information, is one of the most potent reasons why the farmers of this country have not been in position to take effective steps in controlling conditions of markets and price. Below are given two letters, one from California, the other from New Mexico, which disclose conditions that should be made impossible. With the plan of the Farmers Society of Equity in operation throughout the country such conditions would be impossible. Can't you get that idea firmly fixed in your minds, brother farmers? And can't you see that with a little work, a little money and a little patient waiting for the movement to invade new territory and close up the gaps, the new system, owned, operated and directed by farmers, will become a glorious reality, and never need a crop be sold for less than its value? Read these letters and ponder them:

Kingsbury, Cal.

UP-TO-DATE FARMING:

Some time ago I wrote you concerning peaches I had for sale. Since my little note was printed in your paper I have received many letters, one of which I enclose, inquiring about fruit and prices here. In the meantime I had shipped my peaches, so I had none, but there is a liberal quantity still here in the hands of the growers, as the price offered by local dealers is not worth considering—it is no market at all. The market for dried peaches yesterday was 3½ cents per pound. Now I am wondering what the readers of UP-TO-DATE are paying their grocers for standard, choice and fancy dried peaches? Do you get them? Keep you are overfed on them? (The Indianapolis price on January 22 was 15c for choice.—Editor.) A young man who has been working in the east said he recently paid 35 cents for a can of peaches containing nine half-peaches (four and one-half whole peaches). These could not have weighed over two pounds at best. Now we receive \$20 a ton, or 1 cent per pound, for the fresh fruit.

We are in an almost exclusive fruit-producing section, and must buy many of our necessities in the way of farm products. Bacon costs us 35 cents a pound, milo maize for poultry feed costs us \$1.25 per bushel. Other things in proportion.

Referring to the letter from Mr. Estlack (printed below), it seems to me he and his neighbors should have organized, built and operated their own cannery if, after first organizing, they were unable to make a satisfactory contract price. I am a great believer in the small local co-operative institution, such as creameries, cheese factories, canneries, etc.—A. L. Cross, Kingsbury, Cal.

Mr. Estlack Wrote Mr. Cross as follows:

Monument, N. M.

A. L. Cross, Kingsbury, Cal.

Dear Sir—I have just read your letter in UP-TO-DATE FARMING. I have been a party to "leg pullings" and "skin games" where I was the one who furnished the raw material. I know we farmers are robbed of the greater part of the value of what we produce. Recently a local company put in a cannery and advised us to raise tomatoes, and we bowed our backs to the blistering sun for many moons and then were offered \$6 a ton, delivered! I fed mine to my hogs. Durned if I furnish my hide for every fellow to tan!

See what it will cost you to deliver dried apricots to Midland, Tex. I can help you sell a few tons if you can put them there at a reasonable figure after the overworked railroad capitalist gets HIS.

I am a poor, physically disabled farmer who spent the best years of his life over a set of corporation books. Now I am making a specialty of seed beans and have every variety that will thrive in the southwest. We are trying to organize for better prices. I irrigate and am sure of a crop, and can contract a year ahead. The seed houses do not seem to want me to live, so I sell seed on my own hook to farmers direct.—Yours truly, J. C. Estlack.

Saving Dollars in Hundreds

We have had a hard tussle in the past to get into the way of things, but now we are making good progress. We have just placed our second car-load order for flour and are ordering our third car of coal. We saved \$54 on our first car of flour and \$50 on each car of coal, over the best offers made us by local dealers. We have a number of new members waiting to be obligated. We have a few cars of corn and a large number of horses to dispose of. A. O. Alexander, secretary, Arnold, Nebr.

A Minister's Views—With His Coat Off

"Will you kindly send me full details as to the F. S. E. organization and its work? What are your terms to active organizers?"

I am pastor of a Congregationalist Church at Dwight, Richland County, North Dakota, adjacent to both Minnesota and South Dakota. I supply another church at a point 10 miles distant. No one who has studied the social aspect of the rural situation, as we ministers must, can doubt the urgent need for co-operative marketing. It will solve to a great extent the most critical problems of the country church, problems now agitating the Christian world. The time has come for action. Do not understand me as advocating the induction of religion into the F. S. E. To be successful your organization must be non-partisan, non-religious, strictly business, for business purposes only. But when farmers or any other class are laboring under adverse circumstances they are in no condition to build up their spiritual natures. They have less of faith, hope and charity, the three fundamentals in Christian thought and action. They are, very naturally, more concerned with economic injustice than they are in soul salvation.

If you need me, and the work will permit me to devote three or four days each week to it, I am sure I can develop the organization in this locality. I am 27 years of age and in excellent health. Please let me hear from you.—Rev. J. A. Thornton.

Progress in Pennsylvania

We held a very enthusiastic meeting of our county clearing house on January 17, and now have our county organization practically complete. We have a group of men on our executive committee who are practical business men of ability, and we are gaining ground fast in this section. Now we want you to send us a district organizer's contract, made out in the name of our county clearing house, so we may have supervision or organization in this and adjoining counties, and a county organizer's commission to Reuben Ressler, who has been chosen organizer for Northumberland County.

We've had a call to go to Gettysburg and capture the famous old battle ground for Equity. Send literature for distribution, including copies of the January 1st issue of UP-TO-DATE FARMING. Mr. Everitt's speech hits the nail squarely on the head.—W. S. Kerstetter, County Secretary.

A Word From "Farmer Bill"

Just a word to say we organized Gannett local, 40 strong, Tuesday night. We injected the spirit of Equity until the meeting house was aglow with the light of co-operation radiating from their countenances.—W. S. Parkhurst, Idaho.

An Oregon Local's Way of Winning Members

Oscar Whitecotton, county organizer for Marion County, Oregon, sends in a very pleasing account of a New Year's dinner given by the members of the R. S. E. local in the Keiser School House. The entire community was invited. A literary and musical program was given, and several members gave talks on co-operation. Mr. Whitecotton making an address on "What is Wrong with Farming." The affair was a great success, many new members being added to the local.

Up-to-Date Farming
Indianapolis, Ind.

Nebraska Farmers Make Money Through Co-operation

At Crete, Neb., is a Farmers' Co-operative Elevator Company. It has 192 members—farmers of that neighborhood. Based upon the average value of Saline County farms as returned by the last census, these 192 farmers are worth \$3,297,408. This is more than twice as much as the combined resources of all the banks in Saline County. These farmers have been running a co-operative elevator successfully for years and bucked the grain combine to a standstill.

What Farmers Should Receive

"The average farmer of Illinois gets about \$12.50 a month for his labor," said B. F. Harris, chairman of the Agricultural Commission of the American Bankers' Association before the farmers' convention at Columbia, Mo.

"The farmer ought to be able to get at least 6 per cent interest on his investment, besides a salary for managing his farm. If he can't do that he ought to sell out and work for somebody else."

Mr. Harris praised the new currency bill, which, he said, will make it possible for the farmer to get all the loans he needs for legitimate purposes.

Texas Onion Growers' Troubles

The Southern Texas Truck Growers' Association are still wrestling with their problem of handling locally their crop of onions in 1914. A committee representing the banks met with them to consider the financial end. When all local shipping associations become members of a national federated system they will have none of the difficulties which now confront this local independent association.

A Municipal Abattoir in Texas

Paris, Tex., built a municipal abattoir in 1909. It is a mile and a half from town and cost about \$10,000. It can handle thirty hogs and rather more of sheep and cattle per day. Nothing is wasted, although naturally the by-products are not as numerous as are turned out by the great packing plants. The city charges \$1.25 for killing cattle and 75 cents for sheep, calves and hogs. The patron gets the hide, liver, heart, caul, tail and brain. Carcasses may be left in the cooler free for five days, and if left longer the charge is but 10 cents a day. For the first six months, during which it was expected that the plant would be run at a loss, it netted \$701 per month, expenses were \$562, leaving a profit of \$139 a month. At this rate the net profits for the year would be \$1,668, a very satisfactory dividend on a \$10,000 investment, besides the one big feature of leaving twelve times \$562 (the amount which would have had to be paid to the packers with interest added) in the city, giving employment and living wages to home people.

Hemp Growers to Hang Together

A group of Wisconsin farmers in the hemp belt have organized, with the help of the State College of Agriculture, an association for the purpose of handling and marketing their hemp in a business way. It is expected that this year's crop will average from 1,000 to 1,200 pounds an acre, worth at ordinary prices from 5 cents to 7½ cents per pound.

A Successful Co-operative Store in St. Paul

St. Paul, Minn., has a successful co-operative venture in the St. Paul Coastal Co-operative Association, operating a grocery store at 14 West Ninth street. This store has been in operation three months, has 165 regular customers, whose gross business totals 5,000 for the three months. The largest individual account was \$160, and the average account was about \$80. The first quarterly dividend was declared, amounting to 5 per cent on all purchases. "We put 6 per cent of our profits into a sinking fund, which reduced the amount of our dividends for this quarter," said Secretary A. W. Williams. When organized producers and organized consumers begin dealing with each other, as they will under the Equity System, one big division of the marketing problem will be solved.

Short Items of Interest

Nebraska has fifty-five different organizations of farmers, which comprise organized agriculture in that state. They are coming to recognize the advantages of greater co-operation, and recently 5,000 delegates, coming from all organizations and from the ranks of the unorganized, met at the Nebraska state farm to consider matters of common interest, for the general welfare.

Muscatine (Iowa) County farmers have a county crop association, a county farm adviser and are now deeply interested in co-operative marketing. Leaders are at work to effect systematic organization.

The vegetable growers near Elgin, Ill., the great dairy center, have organized the Elgin Vegetable Growers' Association, with two definite objects. One is to do co-operative buying of supplies and the other is to co-operate in marketing for better prices.

Thirty farmers in the vicinity of Lafayette, La., have organized a shipping and marketing association for the handling of live stock and sweet and Irish potatoes. Most of the farmers in that vicinity have abandoned the cultivation of sugar cane.

SPORTING GOODS, cards, dice, books, etc.; catalog free. D. O. Smythe Co., Newark, Mo.

WATCHES repaired; best work. Free case protector. W. G. Landt, Jeweler, 7531 Normal Ave., Chicago, Ill.

WE WERE surprised when we read in the report of the last census that there were grape vines on only 14.5 per cent of the farms in the country. Grape vines are expensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And, in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming: Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes" received. As you probably know, the census reports on agriculture are based on a farm-to-farm canvass, and if a farmer grew but one grape vine he would be reported. The intention is to get a report of every farmer who grew a grape vine. Very respectfully,

E. D. DURAND, Per W. J. B. The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

One-Half Dozen Grape Vines on Every Farm

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free

Send a club of three at 75c —\$2.25, and we will send you the paper one year and the collection of six vines free. That is four for the price of three. Paper four years and 24 vines all to one address for \$2.25 if desired. Paper and vines will be sent to separate addresses if requested.

is the biggest boon to stock owners ever discovered. It stops losses from worms, prevents disease, aids digestion, tones up the system, helps food do your animals more good, gives them sleek coats, bright eyes and plump bodies. It pays for itself several times over in extra profits and protection against disease. It enables you to feed new corn safely and greatly lessens the danger from hog cholera and other destructive plagues. Read these letters:

"My neighbors lost 25% of their stock from corn fodder and kafir fodder poisoning and altho' I fed the same feed that they did, with the addition of the 'Sal-Vet' which I gave, I lost none."
—Frank Frame, Sawyer, Kansas.

"Before I started to feed 'Sal-Vet' my hogs were sick, and I had lost 6 of them; since feeding 'Sal-Vet' I have lost none. All now have good appetites and are thriving."
—Ernest Triebe, Rt. No. 2, Clearwater, Minn.

"The benefit which my horses, cattle and sheep derived from the use of 'Sal-Vet' is such as to make it almost indispensable." — A. L. Martin, Director of Institutes, Department of Agriculture, Harrisburg, Pa.

Sal-Vet is a medicated salt which expels the deadly stomach and free intestinal worms without bother to you. You place it where your animals can run to it freely and

THEY DOCTOR THEMSELVES

It requires no dosing, no drenching, no starving, no trouble at all. Surely you cannot afford to turn down this opportunity I give you of seeing for yourself on your own farm how Sal-Vet will save and make you money. Remember I don't ask you to send me a cent of money in advance—you have nothing to pay when the shipment arrives except the freight charges. At the end of 60 days report results—tell me what Sal-Vet has done for you. If it fails to do what I claim—if it don't rid your stock of the profit-eating stomach and intestinal worms, I'll cancel the charge—you won't owe me a penny. Send the coupon today.

and inspected Red Clover. Also Mammoth, Alsike, Alfalfa and Sweet Clover of choicest quality. **TIMOTHY Blue Grass, etc., at low prices.** Now is the time to buy. Ask for samples and copy of our Special Clover Seed Circular. Large illustrated catalog of Seed free. **IOWA SEED COMPANY, Dept. 50 DES MOINES, IOWA**

Grass Seed

MEDIUM RED CLOVER

O. K. Brand Best Seed.....\$9.50 per Bushel
Prime Seed, Fine..... 9.00 per Bushel

MAMMOTH OR ENGLISH CLOVER

Extra Fine Seed.....\$9.50 per Bushel

TIMOTHY

O. K. Brand.....\$8.25 per Bushel
Prime Brand..... 8.00 per Bushel

Good Brand..... 2.75 per Bushel
Bags extra at 23 cents; 2 1/2 bushels to the bag.
O. K. Seeds are "all right" seeds. They are planted by farmers the country over.

O. K. Seed Store, Dept. A, Indianapolis, Ind.

STEEL Shingles Underpriced

On Steel Shingles, we underprice everybody. We sell direct from factory to user. And our enormous business permits a very low profit per sale. We pay the freight and guarantee safe, prompt delivery.

Edwards Steel Shingles can't rot or burn. And the Edwards Tightcote Process and Patented Interlocking Device positively prevent rust. Outwear best wood shingles, cost less and are easier put on. Send Postal for latest prices and see for yourself what you'll save. Give dimension of roof if you can. If not, send the Coupon below. Write today and you'll hear by return mail. Ask for Book 291

This Brings Big Offer

THE EDWARDS MFG. CO.
241-291 Lock Street, Cincinnati, Ohio
Please send Book on your Steel Shingles, together with latest Freight-Paid prices.

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

Organized Chambers of Commerce

IF THERE is any special class of people in the business world who know and take advantage of all the helpful things (for them) in the possibilities and management of their business, it is those who compose the boards of trade and the chambers of commerce in the various cities of the United States. A board of trade or a chamber of commerce is a local organization to facilitate business, do more and better business at greater profit. The business men who make up these organizations first learned the great advantage of local organization. Then, after a time, they discovered the fact that local co-operation was not sufficient—that far greater results and larger profits could be obtained through the co-operation of all these organized bodies. Like the good business men they are, they organized a federation of the many various boards of trade and chambers of commerce, which federation is known as the "Chambers of Commerce of the United States of America."

The boards of trade and chambers of commerce are as widely separated as the farmers of this country are separated. Yet they can organize, federate and co-operate. So can the farmers. In fact, since these others have federated, it is all the more essential that the farmers should, as most of the business of the boards of trade is dealing in farmers' products. The one way now to cope with this gigantic business organization is through another gigantic business organization, where the heads of the one can meet the heads of the other on equal ground. If the farmers do organize and federate, then they can meet the organized business world on equal ground and with far greater power.

The second annual meeting of the Chamber of Commerce of the United States of America will be held in Washington, D. C., beginning the second week in February, and much of its affairs will be taken up with the consideration of matters which are directly important to every farmer. Keep your eyes open, neighbor.

Express Companies and Farmers

Not many farmers make a very extensive use of the express companies, except those in the fruit and trucking districts, where this method of transportation is necessary for the proper marketing of perishable fruits and vegetables. One reason why farmers have not been larger patrons of these companies was the cost of transportation, which was too great to permit its extensive use by the farmer in his business. Up until the arrival of the parcel post the express companies had so much business they had no desire to increase the amount of it by decreasing the rates to encourage new business. Now that the parcel post has made its entry into the world of commerce, and millions of packages which otherwise might have gone by express are now being sent through the postoffice service, the express companies are making a strong bid for some of the new business, voluntarily reducing rates in some instances and improving the quality of the service all along the line. A new ruling on rates by the Interstate Commerce Commission reduces express charges and now there are opportunities for farmers to make profitable use of express service. We call your attention to an editorial containing more definite information along this line, information every reader should have.

The Farmers' Life Insurance

Insurance has long been recognized as something more than an expense from which no return is ever made unless a loss first occurs. Business has come to look upon it as a necessity and an asset. Some large corporations insure their officers, making the policies payable to the corporation. They realize that if an important member of their executive force were to be suddenly removed, there would be a break in the business that might mean heavy losses financially. Corporations consider it a splendid business policy. The same general laws of business enterprise, thrift and success which apply to business in the commercial field apply also to business in the agricultural world. The farmer himself is the biggest asset the farm has. Everything depends upon him. Let that dependence be removed, and all the affairs on the farm must suffer. A life insurance policy is not only a help in time of distress, but it is an aid at all times. Farmers need credit, almost without exception. Especially is this true with farmers who have ambition to make great progress in their work. A paid-up life insurance is an aid to credit. When a farmer can go to his banker, and place before him a policy in a strong company, he has an asset of undoubted value. Life insurance and fire insurance are quite as important to farmers as to other classes of business men.

By the way, have you a policy, and are all premiums paid?

The Farm House Kitchen

"The kitchen," says the Department of Agriculture, "is the most important room in the house. The housewife spends her lifetime in this, her 'workshop.'" That is not the only reason, either, why the kitchen should be considered the most important of all the rooms in a farm home. Where mother is, there will the children be, and, most of the time the father is in the house, he also is in the kitchen. All the editors of this paper grew up in the kitchen. It was the place to read, to talk and to eat, and to learn the really important lessons of life at mother's knee. God bless the kitchen, and if the big department down at Washington can do anything to make the kitchen a better place, better for mother and the girls, it will also be better for the boys, the men and the nation. Look over your own kitchen, neighbor, and see if it is as conveniently arranged as it might be.

**1913
RECORD**

Magnificent Crops in all Western Canada

All parts of the Provinces of Manitoba, Saskatchewan and Alberta, have produced wonderful yields of Wheat, Oats, Barley and Flax. Wheat graded from Contract to No. 1 Hard, weighed heavy and yielded from 20 to 45 bushels per acre; 23 bushels was about the total average. Mixed Farming may be considered fully as profitable an industry as grain raising. The excellent grasses full of nutrition, are the only food required either for beef or dairy purposes. In 1912, at Chicago, Western Canada carried off the Championship for beef steer. Good schools, markets convenient, climate excellent. For the homesteader, the man who wishes to farm extensively, or the investor, Canada offers the biggest opportunity of any place on the continent.

Get Your Canadian Home From the Canadian Pacific

The Home Maker

We will make you a long time loan—you can move on the land at once—your Canadian farm will make you independent and

We Give You 20 Years to Pay

Rich Canadian land, \$11 to \$30 per acre —one-twentieth down. Long before final payment comes due your farm will have paid for itself.

We Lend You \$2000

For Farm Improvements Only

No other security than the land. You are given twenty years to pay with interest at 6%. In case of approved land purchaser, we advance live stock to the value of \$1,000 on a loan basis.

Or if you want a place already established, you will find one on our Ready-Made-Farm. All planned by our experts, and our service and advice is yours free.

This Great Offer Is Based On Good Land

Finest on earth for general mixed farming—irrigated and non-irrigated lands. Located on or near railway. The famous Canadian West has magnificent soil, good climate, churches, public schools, good markets, good hotels, unexcelled transportation—and 20 years to pay. Time is precious. Write today.

Balanced Rations

"Go, make thy garden fair as thou canst,
Thou never worketh alone;
Perchance he whose plot is next to thine
May see yours, and better his own."

Study the seed catalogs.

A farmer need not necessarily be a "Bull Moose" to be progressive.

Sam Saxon says the thing most liable to go broke about an automobile is its owner.

Good ventilation is necessary to good health. Nature made us to breathe free air.

The garden should be in a spot where the soil dries out and warms up early.

Down south they have Jim Crow laws. Out west the states are passing Jack Rabbit laws.

The girl who belongs to a canning club is going to make a better housekeeper than one who doesn't.

The index to an orchardist's character is found in the bottoms of his apple barrels, not on the top.

Efficiency is the middle name of all successful men, farmers included. Look the word up in the dictionary.

Cross-bred animals are excellent for all purposes except breeding. Never use a cross-bred animal for breeding.

Be strong in your belief that 1914 will be your best year. You will then have a much better chance to make it so.

People who work at the job a little can always make home happy. Co-operation helps in this as well as in other things.

The man who gets your attention with a brass band don't always carry around a golden opportunity, even if he does say so.

Next issue we will have something to say about this good roads business that will, we feel quite sure, be worth your while to read.

Sam Saxon says one reason why more corn grows in crooked rows than in straight ones is due to the fact that there are more of them.

The farmer who has so much work to do he hasn't time to read a good farm paper seldom has the ready cash to pay for a year's subscription.

A boy naturally likes the business game. That's why farm boys leave the farm for town. Make farming more of a business and more boys will take to it.

The real difference in men is the difference that exists in their brains. Brain farming is always more profitable than brawn farming without brains.

Paint and whitewash are good materials to use in the rural uplift. We feel better when things about us look well, and we do good work when we feel good.

We hear much of the bulls and the bears and lambs down in Wall street, but no one ever mentions the hogs, though Wall street has prize-taking animals of that class.

WHICH HORSE?

The Dangers of Debt

THE BOAST of the American citizen is independence. Should the ruling classes of our own country or those of any other nation proclaim that the American people are no longer to be independent and then attempt by any means to make it so, the masses of the people of the United States would fight as no people ever fought before. But even liberty may be undermined and independence sacrificed with no thought or intention of doing it. A people may cease to be independent without any declaration of government to that effect.

The citizen who is in debt, whether to the government or to another citizen or citizens, is not independent. He is not free to act. The obligation of debt that rests upon him forbids his doing things he would otherwise like to do, and that might be of great benefit to him if he dared to do them. Debt is always a menace to liberty and independence. The debtor class is subservient to the creditor class. Prudent fathers have always advised their sons to not go in debt.

These common facts, the recognized experience of all who were ever in debt, prompted us to make some investigations as to the present standing of the people in regard to debt. World statistics show that thirty-nine billion dollars is the sum of the bonded debt of the nations of the world. The aggregate interest on this world's debt is approximately \$2,300,000,000. To all this must be added debts owed by corporations, principal and interest, which must all eventually be paid by

the people. It is claimed that the farmers as a class owe not less than six billion dollars. We do not believe it. The sum is too great. But what they do owe they owe as individuals. In borrowing they may have given mortgages on their lands, but those mortgages were not bonds. They were executed by individuals to secure individual notes. A few years ago eastern money lenders had agents in most of the states, in most of the counties, in fact, to loan money to farmers on their lands and farm homes, but these mortgages were not like municipal and corporation bonds. They would not enter the speculating market as bonds, and hence they were unpopular. The money power wishes to speculate on securities as well as to lend money. This condition has held the farms and homes of the people beyond the reach of what is justly called the money power, for it is very clear that one class has the money and another class must labor and conduct the productive industries.

But a new work of education is now in progress. The farmers are being taught that they need more money than their products will bring them, and there must be provided an easier way for them to borrow. We are told there must be a rural credit system in the United States. Banks must be arranged for their special benefit, so that farmers can combine together and not only give mortgages on their homes and the lands, but in such a way that bonds may be issued on those mortgages, bonds that can enter the stock markets. We quote from the published

(Continued on Page 5)

What Others Say and What We Think of It

"Few men have become rich from the real profits of the land."—Office of Information, United States Department of Agriculture. Oh, yes, they have, lots of them, but they DEALT in farm products instead of growing them.

"Why is it there is such a lack of leaders of the right kind?" pathetically asks the National Field. Bless you, there isn't. There are plenty of right leaders. The trouble is that the most of the followers follow the wrong kind. Isn't it so, now?

"He who can introduce a new system of marketing shall have done a great good to humanity."—J. J. Hill, the Railroad King. UP-TO-DATE FARMING has introduced such a system, and it only remains for the farmers and the business world to acknowledge the introduction.

"The first requisite in civilization is that the people shall be profitably employed. * * * Next to farming, transportation is the most important thing in the world."—Elbert Hubbard, in the Philistine. Accordingly, then, the most important thing in civilization is that farming should be profitable to the farmers, and on at least this one thing we agree perfectly with Hubbard.

"The 1913 wheat crop was larger than ever before, but the demand keeps up so that the farmers have got a good price in spite of the abundance. The farmers can increase their production with little danger of breaking the market."—The Practical Farmer. It is not the total amount marketed that breaks the price—it is the manner in which it is marketed.

"The farm paper which most nearly and perfectly fills its field is the one which takes recognition not only of the farmer's need in the fields and feed lot, but also the needs of himself and of every member of his family in the home."—The Iowa Homestead. Very good so far, but not yet far enough to be sufficient. Needs in the home can only be supplied through what is received at the market place; hence the best farm paper is the one that recognizes the farmer's need in the sale of his crops and helps him supply that need.

"The badge of sanity is the ability to organize."—Magazine of American Industries. Which reminds us of the reply of an attendant at an insane asylum to a question asked him by Elbert Hubbard. The attendant was a very small man, and, unarmed and all alone, was looking after twenty-five lunatics, having them out for a walk. "What's to hinder these big fellows from getting together, putting up a job on you and getting away?" asked Hubbard. The attendant smiled as he replied: "If they could 'get together' with anybody, on anything, they would not be here." Only lunatics are unable to organize, according to this.

Competing With American Farmers

IN MATTERS of government the farmers of America are mercilessly deceived, and their financial interests are notoriously disregarded. If it is a fact that ours is a government "of the people, by the people and for the people," as one of our greatest rulers declared, our present rulers act as though they do not regard the agricultural classes as a part of the people. And in speaking of the ruling classes we have no reference to political parties in a sense of discrimination, for, so far as the farmers' interests are concerned, they seem to sail in the same boat.

But to properly understand recent legislation and the effects that are following it, it is necessary to study certain facts connected with the business of farming. The farmers' only source of revenue is the sale of surplus products. Whether that revenue be large or small depends upon two things—the quantity of the surplus and the price received for it. Of these two the price is the most important.

Therefore, whoever controls the price of the farmers' stuff controls their revenue, and whatever law or other contingency reduces the price of farm products reduces the revenue of those who produced them. Increasing the surplus without increasing the demand reduces the price. The surplus may be increased by increased production, or by bringing to our markets competing products from other countries. This has the same effect on the prices as constantly recurring bumper crops has, and a law that created or permitted such a competition that was not permissible before is responsible for the reduced revenue, as also are those who enacted the law.

That such competition is an injury to the farming interests of the United States, as like competition is claimed to be injurious to other industrial interests of the country, has long been understood by our lawmakers, and to restrict it so as to make it less harmful importers have been required to pay for the privilege of bringing their commodities to the markets of the United States to sell in competition with the products of our own people.

But for some years our ruling classes have chafed under these restrictions, and have been eager to withdraw such protection from the agricultural classes. During the latter part of Mr. Taft's administration a strenuous effort was made to abolish that protection, at least so far as Canada was concerned, and in consequence of that effort the voters emphatically repudiated the rule of Mr. Taft. But politicians are slow to learn, almost as slow as farmers are to act in matters that vitally concern them. The protection referred to, so far as farming is concerned, has been removed, and the world's products are made practically

free to enter our markets in competition with our own stuff, and the results we foresaw and urged before the enactment are coming. During the months of October and November of last year eighteen million pounds of meat was brought here from other countries. This is three times as much as was brought here during the entire year of 1912, when the tariff restrictions were in force. Did we need it? We have never been without a surplus to ship abroad to supply foreign demands that other countries could not so well supply. Did its coming make meat any cheaper to our consumers? The prices charged consumers in this country prove to the contrary. But it competes with home-grown meat stock and reduces the price paid to American farmers.

But where did all this meat come from? Eight millions came from Canada, six millions from Argentina in South America—much of it, it appears, by way of England—three millions from Australia, and about half a million from Uruguay, also in South America. And it came because it was admitted to our markets as free as though the stock had been grown and slaughtered in Indiana or Illinois. During the same two months 253,358 head of cattle came free from Canada and Mexico.

And that is not all. Corn is coming to our eastern seaboard from South American countries, and is so affecting prices that this staple product commands lower prices in the east than in the corn belt markets. Formerly the eastern demand was supplied by rail from the great central states. That now seems to be changed, and water transportation supplies our eastern demand and takes from our corn belt and great lines of railroad their surest and best customers and business.

Nearly all our home demands are likewise affected, and other crops as much or more than corn. The Department of Agriculture tells us that the importations of wheat during the month of November, 1913, were 127,000 bushels, against only 2,000 bushels during November, 1912. Of flour there was imported during last November 10,124 barrels, nearly twice as much as during the same month a year before. During last November 5,132,308 bushels of oats were brought into our markets from abroad, whereas only 4,266 bushels came during the same time the year before. Last November's receipt of competing potatoes was 764,863 bushels, against only 10,668 bushels in November, 1912. When we have large crops at home, as we did not have last year, the effect will be disastrous. The present administration's own reports certainly prove that. We appeal to the farmers to be on their guard, with a better system of marketing that will find and supply the interior demands.

agricultural resources, the increase of production and the lessening of the costs of production, and thus supplying the ultimate consumer with the products in form for use as cheaply as possible. It is the province of the Department to do all it can to bring about conditions which will enable the sixty-five millions living in cities and towns to enjoy good food and good clothing in plenty, at a price that will not work a hardship upon them. It is no less the province of the Department to do all it can to bring about conditions so the thirty-five million producers living on the farms can dispose of their products at a price that will enable them to enjoy comforts and luxuries, purchase the products of mines and factories, improve their farms, and raise families creditable to the nation. When the duties and purposes of this great Department is thoroughly understood by all, and the officials and employees of the Department are selected for their fitness to carry out the full purpose and discharge all the duties implied, the whole people, as well as any part of them will be vastly benefitted.

Up until this time, the chief officials of the Department have thought they could serve both producer and consumers by encouraging the farmer to grow larger crops, at less expense, on the theory that the larger production would bring the farmer a greater income, and, on the other hand, that the more abundant supply would reach the consumer at a lower price. Secretary Houston admits the fallacy of this argument, and fallacy it is. So we find new plans and purposes are being taken up by the Department. The

Bureau of Marketing has been established to investigate the best means of getting the products from the farmer to the consumer, at prices which will be best, in the long run, for all concerned.

If the province of the entire department has been little understood by the average person, that of this new bureau of the Department is even less understood. A very general idea prevails that this bureau is going to set up in the marketing business, tell the farmer what, where, and when to sell, and then establish some means whereby the consumer can, without any endeavor on his part, get his flour and meat, vegetables and fruit, fresh from the farm at greatly reduced prices. Nothing of the kind is likely to happen. It would be as reasonable for the farmer to expect the Bureau of Plant Industry to spray his trees, because it has made special study and investigation of spraying, as to expect the Bureau of Marketing to market his crops. A farmer can get good advice from the specialists in either department, but he will have to do his own work, or hire some capable man to do it for him. The Department will recommend better methods of marketing, but it will hardly establish them, any more than when it recommends that farmers plant potatoes free from disease, it will furnish disease-free seed. Let us all come to a better understanding of what the Department will do, and what the farmers must do for themselves. We shall then lose no time waiting for something we shall never obtain by waiting, but will undertake to get it for ourselves as we should.

Shipping via Express or Parcel Post

A NEW interstate express rate tariff went into effect throughout the country on February 1 by order of the Interstate Commerce Commission. Inasmuch as a new parcel post rate went into effect January 1, a comparison of the two rates is of interest and value to all shippers of agricultural products in packages weighing twenty pounds or under.

In a large number of instances the express rate is the cheaper rate. Especially is this true with packages of the heavier weights.

We give a few instances of comparisons to show differences in cost of transportation, in order to impress our readers with the fact that such differences exist, and to make inquiry before making shipments, so the cheaper rate may be always used.

In Zone 4 a package of ten pounds by parcel post, uninsured, would require 43 cents postage. The same package could be insured for \$50 and sent by express for 39 cents. A twenty-pound package, uninsured, requires 83 cents by parcel post; by express, insured for \$50, it takes but 58 cents. To insure a package for \$50 by parcel post requires 10 cents extra.

As distances increase, the differences in cost of transportation are greater. For instance, to send a twenty-pound package, uninsured, by parcel post from New York to Salt Lake City requires \$2.40. The same package, insured for \$50, could be sent by express for \$1.71.

There are many cases where a package can be sent by parcel post, uninsured, more cheaply than by express, insured, but by insuring the package by parcel post the express rates are cheaper. As an instance, an uninsured parcel post package weighing five pounds, mailed anywhere in the fourth zone, say from New York to Cleveland, O., would require 23 cents postage; if insured for \$50, the postage would be 33 cents. By express, the package, insured for \$50, would be carried for 28 cents. (All express packages are insured for full value, if shipper de-

clares the value thereof, without extra cost. In other words, the express company is liable for all damages and loss. The United States postal service will not be responsible for any loss unless the package is insured, for which insurance an extra fee is charged.)

A package weighing more than ten pounds, up to twenty pounds, can be sent by express, insured, cheaper than by parcel post uninsured, except in the first and second zones.

There are some other advantages in making express shipments that are of value, and should be considered. The shipper is always given a written descriptive receipt for all packages delivered for shipment. If packages are either lost or destroyed the company in charge must notify both the shipper and the consignee.

The express companies can be compelled by law to pay claims for which they are liable. The Postoffice Department can not be sued by law except in the United States Court of Claims at Washington, D. C., and a judgment in that court can not be collected unless Congress makes a special appropriation.

Express charges are collectible at destination, if so desired, and credit is allowed to responsible shippers, collections being made weekly or monthly. Postage must always be prepaid.

The express companies accept notes, drafts, bonds, mortgages, accounts, etc., for collection throughout the civilized world. The postoffice renders no such service.

The express companies, as a rule, transport small packages in packing chests and so protect them from injury. The postoffice transports all parcels in sacks and they are frequently broken or crushed. However, the Postoffice Department is now considering the use of different types of containers.

All our readers who make shipments of produce by either express or parcel post should thoroughly inform themselves as to rates from their station to points of destination and be posted as to the services rendered by each method.

The Department of Agriculture

MANY PEOPLE may suppose the United States Department of Agriculture was created and is maintained solely for the benefit of the farmers, which is a narrow and incorrect view. The various departments of the national government, located at Washington, are for the benefit of all the people, and not for any special class, though the operations of a department may be confined to a special class of industry. In the establishment and conduct of the Department of Agriculture the needs of the nation are considered, the consumer, the handler, and the manufacturer as well as the producer. The object of the Department is to assist in building up national welfare by the development of agriculture in all its branches, so that the entire people may have the necessities and luxuries of life in abundance, and that the business industries which are founded upon

agriculture may thrive and prosper. The Department is as much interested and concerned, and rightly so, in providing the cotton and woolen mills of the country with the kind, quality and quantity of fibre they require to keep their looms running steadily, giving employment to thousands, and providing clothing for millions as it is in helping the cotton planter and the wool grower to understand how to produce them to best advantage. The Department of Agriculture is not for farmers alone, but for the whole people, and its duty is not only to encourage production of field, garden and orchard, but to find ways and means of supplying our population with their needs which must come from the vegetable and animal kingdoms. It is not to help the producer any more than to help the consumer. To fulfill its purpose, it must help both, and do injury to neither. Naturally, then, it should concern itself with the conservation of

No Longer to Be Ignored

SPEAKING for the farmers of Maine, Mr. C. E. Embree, a farm organization manager there, says the marketing end has been ignored too long. The organizations in that state are separate, each having separate offices, and are doing business along independent lines. But the state body hires a manager, who assists in marketing produce and buying supplies, and thus the different organized bodies work more or less in unison and derive relative benefits.

We mention this particular case because Maine is one of our most distant states, and is in the far northeast and on the seaboard, where it is thought the western spirit of organization and aggressiveness does not prevail to so great a degree. But it is a fact that marketing conditions can not be much longer ignored anywhere, and such word reaches us from almost every state in the Union. The high officials have at last become convinced that, by proper marketing, the farmers may have even better reward for their labor and the wants of the people be supplied at much lower prices. The accomplishment of these two things may well claim the vigilant attention of the great masses of the people, including professional and official life. It only remains to make the efforts general. A local organization here and there may accomplish much, and the purpose of handling single crops or products may convince of what can be done, but the essential thing is a nation-wide organization and the bringing in of every product under the same control. We do not mean an arbitrary control, but a directing power that will prevent speculative depression of price and monopolistic price extortion at the other end of the deal, and that, at the same time, will find every demand and supply it. If a single organization can not accomplish this without too much delay then all the organizations should immediately federate on the question of marketing, not one product only, but all products. Thus should there be a marketing knowledge and control, a rural marketing system that shall have a direct knowledge of both supply and demand, extending from Maine to Texas and from Florida to Washington.

There is nothing selfish or arbitrary in this. It is purely mutual. The supply needs the demand as badly as the demand needs the supply. Neither can do without the other, and both are benefited by coming together. But we have little hope of results through official channels. There the eternal round of committee work and investigation, of commission control and "expert" management have got into ruts that are not only ineffective, but disgusting. This accomplishment is up to the producers themselves, and we want to see them united for the greatest purpose that ever before appealed to them. And the consumers should lend every possible assistance.

Powderly's Plan

MANY of our readers will remember the name of T. V. Powderly, the old wheelhorse of the Alliance movement. Very few, possibly, who knew him in the old days know where he is or what he is doing. Mr. Powderly is now chief of the Division of Information of the United States Immigration Bureau and is in Washington, D. C., giving assistance to the foreign class who come to this country to attempt to better their condition. Mr. Powderly thinks the government is not living up to its opportunities, nor doing its full duty in the matters of turning foreigners loose at the gates of Ellis Island, to hunt their own way to employment, and he believes a "bureau of distribution" should be established to enable them to find places where they can be of service to this country and of benefit to themselves. His plan is to have a big assembly room at the

Remember This

An advertiser in UP-TO-DATE FARMING writes: "Up-to-Date Farming was one of the seven best papers used. As the advertising addressed itself to farmers of the most intelligent class, this speaks highly for the character of your circulation." We have other such letters to show that advertisers appreciate your patronage.

It also proves that our readers are satisfied with the advertisers. The publisher makes this possible by accepting only reliable advertisements, and guaranteeing to the readers of UP-TO-DATE FARMING all ads that are published. His guarantee below is your protection. You are safe in patronizing advertisers in these columns.

A. H. Ludwig

Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

immigrant station, and when foreigners are admitted they should be taken to this room, where intelligent agents of the department would talk to them about actual conditions here, explain the various lines of work open to them in city or country, and answer their questions and find out what they are best fitted to do. Lectures on our industries, illustrated with stereopticon slides or moving pictures, should be given in foreign languages. Mr. Powderly also suggests that a "farm" should be provided where those who were farmers before they came here could be taught the rudiments of farm work as it is done in America, to help both the immigrant and the American farmer who needs help, and thus send many an honest, ambitious foreigner to the place where his services are needed, rather than to crowd them in the overcrowded tenements, to find work where and when possible.

With the co-operation of the Post-office Department, Mr. Powderly has sent out over 8,000,000 postal cards to American farmers, asking for information as to labor wants. These cards were sent to rural delivery carriers, with instructions to deposit one in each rural letter box. From the replies received, Mr. Powderly says the showing is conclusive that good farm labor is growing scarcer each year, and that plenty of good jobs await steady, honest men who have had past experience in farming.

All this is indeed very interesting, and the plan, if carried out, should be beneficial to many. There are some very large difficulties to overcome before very much can be accomplished. Our farmers will hesitate to employ men who can not speak our language, and the foreigners, in turn, do not like to be isolated from their own people. Hence they will continue to crowd in the coal mines and the tenements, live in greater poverty, undergo greater hardships, because of the great natural law so crudely expressed in the old saying, "Birds of a feather flock together."

The Lumber Trust Pirched

THE STATE of South Dakota has won a victory over a lumber dealers' combine which is of great interest to all farmers and particularly farmers' elevator companies who handle lumber. South Dakota has a state anti-trust law, and it was under this that several large lumber companies operating in the state were convicted and fined for having fixed prices to drive the farmers' elevator company at Geddes, Charles Mix County, out of business. Two scales of prices were agreed upon by these dealers, a maximum price where there was no farmers' competition, and a minimum price, which was the actual cost price, where competition existed. The minimum scale was made operative at Geddes, forcing the Farmers

Elevator Company at that place to sell at or below cost to meet the competitive prices of the combine. The convicted companies will carry the case to the supreme court of the state and make a test of the constitutionality of the law.

In Missouri a similar case has already been decided by the supreme court of that state, which has issued a decree ousting twenty wholesale lumber companies from doing business in the state, canceling the licenses of four unincorporated companies and placing fines totaling \$436,000 on the defendant companies, which were convicted on counts of price fixing, curtailing the supply, instituting boycotts against independent dealers. The suits were filed in 1908 by ex-Governor Hadley, then attorney general for the state.

New York and Better Marketing

GOVERNOR GLYNN of New York is joining others in high official life in favoring a better system of marketing. He recently held conferences with other influential people of the state, with a view to reducing the price of farm products as they come to the consumers. He believes if the consumers were charged less consumption would be greatly increased and that would encourage greater production more effectively than any of the means now employed to that end.

But the governor is careful to make it clear that it is the consumers' prices he would reduce, not the prices received by the farmers. He wishes the farmers to get the same or even better prices than they do now. Like so many others in these later days, he believes farm prices may be fully maintained, or made higher, and yet consumers' prices be materially reduced. This can be accomplished, he thinks, by better marketing and cheaper and more direct and thorough distribution.

Whether the efforts of those in high places be effective or not, it is gratifying to us that they have at last come to understand the real situation, and it ought to encourage the farmer to press the matter with renewed energy, and see to it that their own plans be carried out and their system made effective all over the country.

The Dangers of Debt

(Continued From Page 3)

plan of an arrangement of this kind in Wisconsin:

The funds of the association are loaned on first mortgage security and when these securities are deposited with the state treasurer the association may issue bonds to an amount equal to the securities deposited. The bonds issued are sold and in this manner additional funds are provided. When the association sells the bond issue it has again in its treasury as much money as when it started.

Who furnishes the money? The buyers of the bonds, and the bonds

go into the stock market along with railroad and other corporation bonds, and a lien upon and control of the homes of the people go with them.

The danger of this system is that it is taking upon itself a nation-wide character. We quote from the report of a national commission appointed to consider the subject:

The commission has provided that the land bank bonds shall be placed in the same class with the highest grade of railroad and industrial bonds and made available as legal investments.

This is the dangerous feature. Such a thing never threatened American homes before. Farmers are not speculators either on boards of trade or in Wall street's stock-gambling concerns. Hence these schemes will put them at the mercy of that class of people and it will take from them their business independence and involve their homes as they were never involved before.

Smile Awhile

Be Satisfied With Less

"You can't fool all the people all the time," said Mr. Wilson.
"No," replied the trust, "but those we can't fool we can buy, and then fool the others that much worse."

A Natural Riser

"That swimmer is a great diver. I wonder where he learned."
"He didn't have to learn. He's been going down and up all his life."

Natural That He Should Be

"Young Sitkins is pretty well developed, isn't he?"
"Yes, his father is a good developer; he has been a photographer all his life."

A Family Affair

"So you think Bilkins hasn't a very high opinion of his wife?"
"No, but he has of her husband."

Buying and Borrowing

Agnes—That book looks awfully interesting. Is it good?
Gladys—Indeed it is. I'd lend it to you in a minute, but I didn't borrow it. I actually bought it.

The Newest Woman

"Is it a fact that your husband has been deceiving you?"
"Yes, I've been giving him a dime every day to pay his car fare and I learn he's been walking to the store and spending the dime for tobacco."

Day After Day

"My dear, this pie seems to be getting dry; it must be yesterday's."
"Yes, and if you don't eat it today it will be tomorrow's."

Could If They Would

Wife—Now, John, don't you believe women can keep a secret?
Hubby—I know they can.
Wife—Good for you. You are smarter than I thought you were.
Hubby—They can, but they won't.

Spoke From Experience

"Johnnie, how does a bee sting?"
"I tell you, teacher, it stings awful."

Well Watered

"I don't understand how you are interested in those government reports. They must be mighty dry reading."
"I read the reports on irrigation and there is nothing dry about that."

Not Now

Maid—The man at the door says he has a bill, ma'am.
Mistress—All right. Tell him we don't need it now; we have enough on hand at present.

To Please the Neighbors

"Why don't your wife sing for the baby when it cries?"
"We found out the neighbors would rather hear the baby."

First Thing Served

"You are the fifth tramp that's been here today. What do you want?"
"Just an ordinary coarse dinner."
"Well, we serve chops the first thing. Yonder is the ax and the woodpile."

He Was the Learner

"You seem to be better satisfied with your wife's cooking than you used to be. Has she learned much?"
"No, but I have."

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

THE general review of trade by Bradstreet's follows:
 Optimism spreads, following ease in money. Textiles fairly active. Woolen mills operating 75 per cent. of capacity. Domestic, not foreign, competition keen. Immediate delivery demand best from jobbers. Future business conservative. Retail trade slack on mild weather. Coal depressed. Car movement light. Bank clearings larger. Failures show perpendicular drop.

One of the notable events affecting agriculture since our last report was the passage of the agricultural extension bill by the United States Senate. It provides that Congress shall appropriate \$10,000 to each State in the Union the first year and thereafter increasing at the rate of \$600,000 annually for all the States until an annual appropriation of \$4,800,000 is reached. The purpose is for educational and experimental purposes. The House passed the bill some time ago, but it will now return to the House for action on the Senate amendments, then to President Wilson for his signature, which it is expected will be given and the bill will become a law.

In this connection we will say that the appropriation by Congress to the Department of Agriculture for the year 1914 was, in round figures, \$25,000,000. The States appropriate probably a like sum in the aggregate. Then there are appropriations for special activities by the Legislatures, and laws in some States that enable the farm colleges and experiment stations to draw money from special funds. It is certain that more than \$50,000,000 has been appropriated annually by the Federal and State governments for years for educational and experimental purposes. Notwithstanding this, the yields of crops per acre have not increased, but rather have decreased. In the last annual report of the Secretary of Agriculture he said that 225,000,000 copies of bulletins and other publications were issued and distributed to farmers and those interested in agriculture in the past sixteen years for educational purposes. And the Secretary said further: "No other government issues as many publications as does the United States, and the Department of Agriculture surpasses all other departments of the government in this respect." Yet there is not a country, barring possibly Russia, where the yields of crops are so small as in ours. Something must be wrong with American agriculture that millions of dollars for education cannot reach.

PUT ANOTHER WHEEL ON YOUR CONVEYANCE AND GO STRAIGHT AHEAD.

Reports on winter wheat to the time of this writing are good, but there is some apprehension because of the cold wave that now grips most of the wheat belt and the absence of snow over much of the territory. Our report shows an encouraging decrease in the visible supply both in the United States and Canada. The cash prices at Chicago and New York are practically the same as two weeks before, but at other points quoted they are about 2c a bushel lower. The price is about 16c a bushel lower than a year before.

The corn visible increased over three million bushels. Notwithstanding that it was the shortest crop in years, the visible supply is the largest for the years we compare. This is probably because of lack of confidence in the future, because of imports of corn from Argentina. Such imports have been 7,131,360 bushels from July 1, 1913, to February 6, 1914. As the average Argentina crop is only about 200,000,000 bushels and Europe needs all the surplus, our corn growers can control the price here if they refuse to dump. The price of corn is from 2c higher in Chicago to about 4c lower at St. Louis than two weeks before.

Oats visible shows a liberal decrease in both United States and Canada, with prices about unchanged.

Cotton is much lower. Potatoes are higher. Sweet potatoes are higher. Beans about unchanged. Hay is lower; it strikes us it is too low considering all conditions.

Shippers' attention is called to changes in express rates. On small packages the rates have been lowered, but on larger ones they have been raised. Get the schedule from your express agent.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on January 31, 1914, with comparisons, are shown in the following table:

	Jan. 31, 1914	Change from two weeks before
WHEAT	67,927,000	— 3,893,000
CORN	19,809,000	X 3,136,000
OATS	29,434,000	— 2,182,000
BARLEY	8,199,000	X 191,000

The visible supply of wheat in Canada on the same date was 53,791,000 bushels. This is 3,626,000 bushels less than two weeks before and 5,667,000 bushels more than a year before. The visible supply of oats was 16,367,000 bushels on the same date, which is 1,485,000 bushels less than two weeks before and is 7,505,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Feb. 4, 1914, two weeks before, and a year before as follows:

	Feb. 4, 1914	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	96 1/4 @ 96 3/4	96 @ 96 1/2	1.11 @ 1.13 1/2
St. Louis	92 @ 94 1/2	95 @ 96 1/2	1.08 @ 1.12 1/2
Kansas City	88 1/2 @ 89 1/2	90 @ 91 1/2	1.00 @ 1.04
Cincinnati			1.11 @ 1.14
New York	1.01 1/2	1.01 1/2	1.09 @ 1.10 1/2
Minneapolis—Spring wheat—No. 1 hard	91 1/2 c	No. 1 hard, 89 1/2 c	No. 1 hard, 87 1/2 c
CORN, No. 2 WHITE			
Chicago	66 @ 66 1/2	64 1/2 @ 65 1/2	51 @ 52
St. Louis	65 @ 65 1/2	63 1/2 @ 64 1/2	52 1/2 @ 53
Kansas City	67 @ 68	67 1/2 @ 68	51 @ 52
Cincinnati		68 1/2 @ 70	55 @ 56
New York	69 1/2	70	58 1/2
OATS, No. 2 WHITE			
Chicago	40 1/2	40 @ 41 1/2	36 @ 37 1/2
St. Louis	40 @ 40 1/2	41 @ 41 1/2	36
Kansas City	39 1/2 @ 40	39	35 1/2 @ 35 3/4
Cincinnati			37 @ 38
New York			39 @ 40

Future Grain Prices

Chicago grain futures closed on February 4, 1914, and two weeks before as follows:
 Wheat—May, 92 1/4 c; July, 88 1/2 c. Two weeks before, 92c and 87 1/2 c respectively.
 Corn—May, 65 1/2 c; July, 64 1/2 c. Two weeks before, 65 1/2 c and 65 1/2 c respectively.
 Oats—May, 39c; July, 38 1/2 c. Two weeks before, 39 1/2 c and 39 1/2 c respectively.
 Winnipeg, Canada—Spring wheat: May, 90 1/4 c; July, 92 1/4 c. Two weeks before, 90 1/4 c and 90 1/4 c respectively.

Cotton

New York, February 5.—Cash cotton closed: Middling upland, 12.65c; middling gulf, 12.90c. The price is 65c a cwt. lower than two weeks before. A year before the prices were 12.95c and 13.20c, respectively.

MOVEMENT OF COTTON—BALES.

	Ending Feb. 6, 1914	Ending Jan. 30, 1914	Ending Feb. 7, 1913
For the week...	228,228	380,449	229,735
For the season...	11,074,307	11,306,152	11,263,843

VISIBLE SUPPLY—BALES.

World's	6,106,182	6,112,713	5,627,628
American	4,551,182	4,585,713	4,510,658

The American visible decreased 34,343 bales in two weeks, while the world's visible decreased 122,657 bales in same time.

Chicago Produce Market

Chicago quotations are used in our report for the sake of uniform comparison issue after issue, and this year with former years. For advice about other markets and instructions for marketing address the Farmers' Society of Equity, Department of Marketing, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons.	Monday	Tuesday	Wednesday
Monday	60	42	92
Tuesday	55	25	33
Wednesday	40	40	25

Total, 3 days... 155 107 150
 Market held steady at former prices. Trade was quiet and largely confined to best grades of Dusty Rurals. Extremely cold weather was held responsible for lighter trading, many of the buyers not caring to take the chance of having stock damaged by frost while in transit. At the same time there was a good demand for really fine stock.

Sales reported were: Per bushel, bulk, Triumphs, 1 car poor, small at 40c. Dusty Rurals—5 cars at 68c. Per bushel, bulk or sacked—

Wisconsin Triumphs, Burbanks and Kings...	\$60 @ 65
Round white...	63 @ 67
Dusty Rurals, fancy...	67 @ 68
Michigan, round white...	62 @ 67
Idaho, Pearls...	80 @ 85
Oregon, Pearls, ungraded, field run...	70 @ 75
Fancy graded, bright...	80 @ 85

NEW POTATOES—Trade is quiet. There is an ample supply.
 Barrels, Branda red, No. 1... \$6.25
 No. 2... 5.50
 Hampers, Florida and, No. 1... 2.50
 No. 2... 2.00

The price of Michigan, Wisconsin and Minnesota potatoes is 2c to 5c per bushel higher than two weeks before. The price of Idaho and Oregon potatoes is 5c a bushel higher than two weeks before. The price is about 20c per bushel higher than a year before. Florida new potatoes are just beginning to arrive. Bermudas are quoted the same as two weeks before.

SWEET POTATOES—A fair demand exists for choice, sound, even-running stock. Jerseys are reported in

ample supply and there are some Delawares on sale. The Eastern are preferred and Illinois are rather slow. The latter are not in favor with the good trade. Some barrels have had to be cleaned up at low prices. They had been on the market until they were in bad order.
 Barrels, Illinois, fresh, well packed, sound and uniform... \$2.50 @ 2.75
 Uneven in quality... 2.00 @ 2.25
 Hampers, Delaware... 75 @ 85
 Jersey... 1.00
 Illinois... 65 @ 75
 Illinois are 25c to 50c per barrel higher than two weeks before. Delaware hampers are unchanged to 10c higher than two weeks before. Illinois hampers are 10c to 15c higher than two weeks before. Kansas City quotes Alabama bushel hampers at 85c. Sales are being made f. o. b. net, at Alabama shipping points around 65c a bushel hamper.

BEANS—Little can be learned about the market. No one seems to be much interested. This makes it appear that there is no material change, and neither offerings nor demand are large enough to have much effect.

Pea Beans—Hand-picked, choice...	\$2.05 @ 2.10
Common	1.75 @ 2.00
Mediums nominally about same as Pea Beans.	
Red Kidneys, choice...	2.95 @ 3.00
Brown Swedish, long...	2.00
Round	2.35 @ 2.50

Change same period last yr.	Change from a year before	Change from 2 years before
Bushels	Bushels	Bushels
— 1,510,000	— 4,206,000	X 1,550,000
X 1,603,000	X 7,520,000	X 10,403,000
X 547,000	X 16,151,000	X 11,652,000
— 444,000	X 2,245,000	X 4,630,000

Pea Beans are unchanged from two weeks before. Red Kidneys are 5c to 10c per bushel higher. Brown Swedish unchanged. A year before hand-picked choice Pea Beans were \$2.25 and \$2.27 per bushel.

HAY—Receipts, 1,625 tons. Choice Timothy Hay in light supply and demand good. Market firm. Other grades quiet. Prairie Hay in large supply and quiet. Demand light.

Choice Timothy Hay...	\$15.00 @ 16.00
No. 1 Timothy...	13.50 @ 14.00
No. 2 Timothy...	11.50 @ 12.50
Iowa and Nebraska Prairie...	10.00 @ 13.00
Illinois and Wisconsin Prairie...	6.00 @ 7.00

Each grade of Timothy Hay is \$1 to \$1.50 a ton lower than two weeks before. A year before the price of choice Timothy was \$15.50 to \$16.50 per ton.

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to January, 1914, inclusive. The lowest figures in January, 1914, were: Wheat, 96c, on January 2; Corn, 65c, on January 3, and Oats, 39 1/2 c, on January 2.

A Letter to Clearing Houses

The National Clearing House has sent a communication to each local, county or district and section clearing house, addressed to the secretary, on the important matter of marketing crops.

Certain rules were laid down by the last national convention, governing the marketing of members' crops, and the board of directors and the executive committee were ordered to provide certain things preparatory to undertaking this work on a national scale. Chief of these things were to arrange for satisfactory market representation and to secure a competent director of marketing at national headquarters. These things have been done. The headquarters of the P. S. E., or the National Clearing House, is now ready to do its part and it expects the loyal and hearty support of every member of our organized clearing houses and of federated associations.

So each member should not fail to attend the next meeting, when the communication will be read and acted upon. Some of the 1913 crops remain to be marketed and the 1914 crops will soon be ready to market. There is no more important matter to call the attention of every producer of things to sell. Therefore don't neglect the next meeting—don't disregard your most vital business concern.

If no regular meeting is to be held promptly, one should be called.

Alfalfa Clover

A field of alfalfa will improve your soil, increase your supply of hay and increase the value of your land. It is easy to grow anywhere if you know how to prepare your land and when to sow. We will give you full directions FREE with each order of seed purchased of us.

Prime seed, testing 99 per cent pure, \$9 a bushel. Choice seed, testing 99.4 per cent pure, \$10 a bushel. Bags, 23c each extra. F. O. B. Indianapolis. These quotations are for immediate acceptance or subject to market changes.

O. K. Seed Store, Indianapolis, Ind.

STRAW—Rye straw quotable at \$7.50 @ 8. Oat straw at \$7 @ 7.50. Wheat straw at \$6.50 @ 7.

There is no change in the prices of straw from two weeks before.

BROOM CORN—Remains quiet. Demand tame, and centered in good corn. Common and damaged very dull. Per ton—Illinois corn... \$120 @ 160
 Oklahoma... 100 @ 150
 Damp and damaged less.

There is no change in the prices of broom corn from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
	Cases	Cases	Cases
Monday	5,774	3,454	3,158
Tuesday	8,126	4,692	4,911
Wednesday	10,828	5,187	2,979
Total	23,908	13,333	11,048

A steadler feeling existed today, with prices about the same as yesterday.

Colder weather evidently was an incentive for buying, but no better prices were obtainable.

Fresh Firsts...	26 1/2 c
Ordinary Firsts...	25c
Seconds...	24 @ 21c
Dirties...	24 @ 25c
Miscellaneous, cases included...	24 1/2 @ 26c
Cases returned...	24 @ 25 1/2 c
Refrigerator, according to quality...	21 @ 23c

Eggs are about 5c a dozen lower than two weeks before.

Fruit

APPLES—There is no activity in the market. Barrels are having a very fair sale. They remain held firmly. The trade of box apples is only moderate. The higher priced goods move slowly. Some prices are as follows (barrels):

Jonathans, \$5 @ 6; Northern Spies, \$3.50 @ 6; Ben Davis, \$4.25 @ 4.50; Baldwin, No. 1 to fancy, \$5 @ 5.50; Grimes Golden, \$4 @ 4.50; Greenings, \$5 @ 5.25.

The price of barrel apples is 50c to \$1 higher than two weeks before.

Some prices for box apples from the west follow:

Arkansas Black, \$2.25 @ 2.50; Rome Beauty, \$1.75 @ 2.25; Jonathans, \$1.75 @ 2.25; Grimes Golden, \$2 @ 2.50; Delicious, \$2.50 @ 2.75; Spitzenberg, \$2 @ 2.50.

The prices on box apples are from unchanged to 50c higher than two weeks before.

Fruit From an Unsprayed Ben Davis Apple Tree—Half Wormy

Fruit From a Sprayed Ben Davis Apple Tree—Very Little Wormy

WITH the institute season on, and with the farmers considering plans for another year, the subject of spraying is a constantly recurring topic for thought and discussion. Not long since it was a topic open to dispute whether it was really worth while to spray fruit and ornamentals, but with the present wide distribution and well-known destructiveness of the San Jose scale, the canker worm and the codling moth, as well as other pests, it is no longer a question as to the advisability of spraying. Practically every open-minded person will admit this point, for his own or his neighbors' imperfect fruit or dying trees are eloquent apostles of the doctrine, and the real questions which come up relate to the detailed information regarding the most effective and practical method of procedure.

With what shall we spray? When shall we spray? How shall we spray? What sort of machine will best serve my purpose? These and many others are questions which are constantly arising and which must be answered and the answers understood if the best results are to follow.

It is no simple matter to answer the first of these queries, "With what shall we spray?" since the selection of the material depends largely upon the kind of tree or plant to be treated and the insect or disease one wishes to destroy, hence the first thing to do is, if possible, to determine the name of the creature under treatment. Books and bulletins relating to these topics are now becoming sufficiently abundant so that one is able to determine many of the common pests for themselves, and thence turn immediately to the suggested remedies. In case assistance is required, however, the various state agricultural experiment stations are always ready with help of a dependable character.

As a rule, most pests and diseases are more susceptible to the application of control methods during some parts of the year than they are at others; in fact, a remedy might give admirable results at one time and, if applied at another, would yield an absolute failure, or even worse than a failure. So not only must care be exercised in the selection of the spraying material, but in its time of application as well. As an example of this point take the lime-sulphur wash. This is recognized as the standard treatment for scale insects, such as San Jose, etc., using the concentrated solution at the rate of one

Unsprayed Peach Tree

gallon diluted with seven gallons of water. The correct season for application is in the spring of the year, just as the buds are swelling. To be sure, good results are sometimes secured by fall and winter applications, but the best returns come from the spring work. What would result, however, if this material were applied at this strength during midsummer? Unquestionably the trees would be defoliated and seriously injured, if not killed. The scale probably would be destroyed for the most part, but the task of making a thorough application would be greatly enlarged because of the interfering foliage. Equally poor results, as far as the insects were concerned, would follow an attempt to control the codling moth if the spraying be done a considerable time before the egg-laying moths appeared, or after the young larvae had made their way into the apples.

When one considers the large number of insect pests the idea of attempting to control them seems a momentous task, and truly it would be if one must needs execute a special program of spraying for each species. Fortunately, however, one treatment, perhaps with a mixture made by combining several sprays, may control two, three or several of these pests. Thus the work is greatly reduced. Further, if, after study and experiment, the practical man or the specialist is able to arrange a tentative spraying program, so that by its execution the more common of the troubles will be controlled, the task is still further reduced and the whole situation resolves itself from a complicated mass of details concerning pests and sprays to one of comparative simplicity, entirely within the range of practicability for the average man.

Orchard Treatment

As an example of this point, we may refer to the results obtained in the apple orchard spraying program upon which the Department of Entomology of the Ohio station has been working for some years. The program may be summarized as follows:

First Spraying—If the trees are infested with San Jose scale, or abundantly with surfy bark louse, or oyster shell bark louse, spray with the lime-sulphur wash in the spring just as the buds are swelling, using concentrated lime-sulphur, one gallon to seven gallons of water.

Second Spraying—Directly after the white parts fall from the blossoms, spray with Bordeaux mixture, to each fifty gallons of which is added three pounds of arsenate of lead paste; or, lime-sulphur one gallon, water forty gallons, arsenate of lead three pounds. The latter spray is the preferable in most instances.

Third Spraying—About ten days after the second, using the same materials. If little rain falls for a few days after the second spraying until

time for the third, the latter may be omitted.

Fourth Spraying—About midsummer, using arsenate of lead three pounds, water fifty gallons.

The foregoing controls the scale insects, codling moth, lesser apple worm, apple curculio (to a certain extent) and many of the apple foliage destroyers, as well as prevents apple scab and has a tendency towards controlling some of the other fungus diseases of the fruit and foliage. It can not be relied upon to control all apple troubles, however. For example, canker worms may be sufficiently abundant to require a special treatment, or plant lice may be very troublesome and necessitate still further spraying, but during the majority of seasons the execution of such a program will yield fair returns. The accompanying illustrations show the amount of wormy and sound fruit from two neighboring trees, one of which was sprayed along lines similar to those given in the spraying program, and the other was not sprayed.

In spraying for any given trouble it quite frequently happens that the results are more far-reaching than one anticipates. This was abundantly illustrated some years since in our experimental work with the lime-sulphur sprays applied for the control of the San Jose scale. In 1903 the peach leaf curl was quite prevalent in northern Ohio, doing immense harm. Much to our surprise, the trees treated with lime-sulphur for the control of San Jose scale were entirely free from curl attack, while the untreated trees, left for comparison, lost all of their fruit and practically all of their foliage. The accompanying illustrations tell the story better than words.

So much for the materials to be used and the time of their application. Even though one is fortunate in the selection of the spraying material and is absolutely correct so far as time is concerned, if the work of application is not properly done, failure or only partial success is the result. Several "don'ts" should always be borne in mind:

Don't spray when trees are wet.

Don't spray during freezing weather.

Don't spray carelessly.

Don't be stingy with the liquid.

The man who sprays in a haphazard way, squirting a little liquid here and there over the tree, has done worse than had he not sprayed at all. Failure to secure results is certain and failures lead to discouragement and the ultimate abandonment of the project.

The last phase of the matter to be considered, and one for which no hard and fast answer can be given, is the selection of the proper spraying apparatus. Conditions and requirements are exceedingly variable. One man may grow potatoes and fruit and naturally demands a machine to serve

both crops; another may have a few small trees, hence a small bucket pump will suffice; still another may have a few large trees, thus requiring a stronger and more powerful apparatus to reach the topmost branches, and another may require the larger, gasoline-engine-driven power rigs for commercial orcharding work. No matter what the requirements, there are a number of definite principles which should guide one in selecting an outfit to suit their special needs.

Garden Treatment

Asparagus—For beetle, spray with arsenate of lead after you have stopped cutting; during the spring pyrethrum powder may be dusted on the larvae.

For rust, spray during July and August with the Bordeaux mixture.

Bean—For rust, or anthracnose, spray with the Bordeaux mixture every ten days.

Blackberry—For fungus attacks use Bordeaux mixture or copper sulphate solution before the buds open.

For insect attacks use Bordeaux mixture and Paris green or Bordeaux and arsenate of lead just before the flowers open and just after the bloom has fallen.

Cabbage—For clubroot, rotate crop or lime the soil at the rate of 35 to 50 bushels per acre.

For lice, use 10 per cent kerosene emulsion.

For cabbage worms, use Paris green when the plants are young; when the plants begin to head use hellebore.

For Harlequin bug, use a trap crop; when this is thickly infested spray with pure kerosene.

Celery—For rust and blight, use Bordeaux every ten days or two weeks.

Cucumber—For the blight, use Bordeaux mixture.

For the beetle, use Bordeaux mixture and the arsenate of lead or Paris green.

For lice, use 10 per cent kerosene emulsion.

Currant—For the worm, use Bordeaux mixture and the arsenate of lead before the fruit is nearly grown. After this time use hellebore.

Potato (Irish)—For the scab use formalin or corrosive sublimate.

For the beetle use Bordeaux and arsenate of lead or Paris green.

Strawberry—For the fungus diseases use the Bordeaux mixture.

Tomato—For the rot use Bordeaux mixture and repeat every ten days or two weeks if necessary.

Sprayed Peach Tree

Everbearing Strawberries

By J. H. Bradley

THESE new creations in the strawberry line are worthy of attention of all strawberry growers. They are really a new thing in the strawberry world, and have come to us to stay. The main thing that distinguishes these varieties from other common kind is their habit of blooming from May until winter. Under ordinary conditions, they will bear berries from June until hard freezing weather. Ordinary frosts have little effect upon them. In order to get the most paying results from them, we advise picking or pinching the blossoms off until within a month of the time when fruit is wanted. The rule is to stop pinching the blossoms about August the first. Then we may expect ripe fruit about the first of September.

Everbearing strawberries may be made to pay handsomely. Select well drained ground that is in a fair state of cultivation and cover the ground with a good dressing of well rotted barnyard manure. Work the manure well into the ground and prepare as you would for any ordinary crop, as potatoes. Set the plants in rows 30 inches apart and the plants 18 inches apart in the rows; and begin cultivation immediately. Cultivate so that you do not cover up the crowns of the plants and keep all weeds down by hoeing about the plants every 8 to 10 days so long as the weeds come or until late in August.

One strong point about the everbearing strawberries, is that they bear a good crop of fruit in the spring as well as in the fall. They are inclined to heavier fruiting in June than common spring varieties. If they are well cared for and fertilized, you can get a crop of fruit in the fall of the first year, a crop the next spring, and another crop in the fall of the second year. Thus you get three fair crops of strawberries in the same space of time that you usually get but one. These strawberries bear their main fall crop the first year, the year that you set them out. Common strawberries bear their first crop in the spring of the second year. These fall strawberries should not be confused with varieties that occasionally bear a crop in the fall of the second year. The true fall strawberries always bear their best fall crop in the fall of the first year.

There is no plant that so adapts itself to all soils as the strawberry. It is a fruit that can be grown everywhere, in sandy or clay soil. While good drainage is essential there is nothing that the strawberry delights in more than a moist soil. Your land may be sandy, loam, black swamp soil, heavy clay or rich clay loam, and in

any of these with good drainage you can grow good strawberries. But of all locations avoid land that has been long in grass, for in such sods will always be found larvae and other insects that would likely destroy the plants. Land that was in cultivation the previous season, or plowed the

past fall is recommended; on such land we advise early, shallow plowing just before you are ready to plant.

The planting should be early in the spring as the soil can be worked in good condition; for the plants will always do better if set before they have started much growth. It is not practical always and in every section to do this; but the earlier they can be set the better they will grow that season, and a larger crop will get the following fall; and in every section the planting should be done as fast as spring advances northward. Do not fail to plant some of the everbearing strawberries, whether you have a town lot, backyard, a private garden or a broad thousand acres; my word for it, you will never regret planting some of the fall or everbearing strawberries.

SUCCESS IN GROWING TOMATOES.

Last season I intended setting one-quarter acre tomatoes and then get a canning outfit to can the crop. Dry weather set in the latter part of April and continued until September 20th, when we had light rains. As a result of this weather we failed to get the number of plants necessary, but by careful watering we secured a stand of plants on one-sixth acre. As the season continued dry it looked as though we would have no tomatoes and consequently did not purchase the canner. Previous to setting we had given the ground careful preparation, and after setting we continued to cultivate thoroughly and often so that in spite of dry weather the plants grew to ma-

turity much thriftier and earlier than we had expected.

They began ripening some fruit about August 1st and continued bearing until frost. We made a fair picking regularly about every other day, and as tomatoes were scarce on the local market, we disposed of them there as they ripened and at good prices. Of course we made use of quite a good many for table use and canned all we wanted for winter use. We kept a strict account of all sold, and after the season had closed, found that we had marketed a little over \$40.00 worth. In ordinary seasons we think that it would be better to employ the canner, but as it was we consider we did as well selling the crop from the field, as the extra price received compensated for the shortage. As will be seen they brought us at the rate of about \$250.00 per acre and they were grown upon ordinary land. Following the advice of the experimental station we used both stable manure and commercial fertilizer, which we think contributed largely to our success. We know of no other crop that could have given us equal results with the same amount of labor.—G. W. Huffstetter.

LARGE OR SMALL POTATOES FOR SEED

An experiment conducted in 1912 at the South Dakota station throws some light on the relative value of large and small potatoes when these are used for seed purposes. In this experiment all small and very irregular tubers were selected out of the total bulk of seed potatoes used in planting the patch. This left the larger, better formed tubers to be used in the lot called "large." All tubers in the original amount of seed were used for planting either for "large" or "small" seed so that there were no intermediate discarded tubers. The average weight of the large tubers was 5.7 ounces, while the small potatoes weighed 3.1 ounces. In nearly all cases the potatoes were cut into four pieces, the exception being in the case of very small tubers, which were cut only into halves. After cutting, the large seed pieces averaged 1.4 ounces in weight, while the small seed pieces weighed .8 ounce. This seed was planted in alternate rows, eighteen rows being used in all, the yield in each case being indicated in the following table:

Row		Yield Pounds	Bushels Per Acre
1	small seed.....	127	132.3
2	large seed.....	160	166.7
3	small seed.....	131	136.5
4	large seed.....	173	180.2
5	small seed.....	131	136.5
6	large seed.....	171	178.1
7	small seed.....	129	134.4
8	large seed.....	181	188.6
9	small seed.....	138	143.7
10	large seed.....	187	194.8
11	small seed.....	138	143.7
12	large seed.....	168	175.0
13	small seed.....	150	156.3
14	large seed.....	175	182.3
15	small seed—Not weighed.		
16	large seed.....	158	164.6
17	small seed.....	139	144.8
18	large seed.....	187	194.7

From the above figures it will be seen that in the case of all rows the weight of those planted with large seed without exception outyielded the rows next to them which were planted with small seed. The average yield of the rows planted with large seed was 180 bushels per acre, while the small seed yielded an average of 141 bushels per acre. Here was an increase of 30 per cent in yield in favor of the large seed.

Observations taken from the crop indicated that the rows planted from large potatoes produced a more uniform crop and the growth was more rapid from the beginning. As potatoes are cheap this spring, it would seem from this experiment that it will be a safe venture to use only select potatoes for seed.

The Postal Life Insurance Company
pays you the Commissions that
other Companies pay their agents

THE POSTAL LIFE is the only Company that opens its doors to the public so that those desiring sound insurance protection at low cost can deal directly for it, either personally or by correspondence.

Whether you call or write, you make a guaranteed saving corresponding to the agent's commission the first year, less a moderate advertising charge. This first-year Commission Dividend ranges up to

40% of the Premium
on Whole-Life Policies

STRONG POSTAL POINTS

First: Standard policies—reserves, now nearly \$10,000,000. Insurance in force nearly \$50,000,000.

Second: Old-line legal reserve insurance—not fraternal or assessment.

Third: Standard policy-provisions, approved by the State Insurance Department.

Fourth: Operates under strict State requirements and subject to the United States postal authorities.

Fifth: High medical standards in the selection of risks.

Sixth: Policyholders' Health Bureau provides one free medical examination each year if desired.

In subsequent years you get the Renewal Commission other companies pay their agents, namely 7 1/2% and you also receive an Office-Expense Saving of 2%, making up the

Annual Dividend of 9 1/2% Guaranteed in the Policy

And after the first year the POSTAL pays contingent dividends besides, depending on earnings as in the case of other companies.

Such is the POSTAL way: it is open to you. Call at the Company's offices, if convenient, or write now and find out the exact sum it will pay you at your age—the first year and every other.

Plan Your Garden Now

By County Agent Burrell, Daviess County, Ky.

NOW is the time to make plans for your family garden, if you are hoping to have a good supply of fresh, wholesome fruits and vegetables throughout the season. It is entirely feasible upon a quarter or half acre of ground, either in the country or in the city, to raise the vegetables for a fair sized family use. The plot intended for garden use should be covered with barnyard manure as soon as possible and the ground plowed during the first spell of open weather when the ground is not frozen. If well rotted manure is available apply it to the surface after the ground is broken, but if fresh manure is used apply first and turn under 6 to 8 inches deep.

It is of utmost importance to order a number of this seasons seed catalogues and order your vegetable seeds early. If you wait until planting time and then rush to the corner grocery for your seeds you may be sadly disappointed. You are pretty liable to get something that does not suit your requirements. If you wait to order from a seed house until ready for planting it will reach the seed house when every one is rushed to death and some choice varieties are exhausted.

Make a plan of you garden on paper and carefully map out the ground as you wish the finished garden to appear. Make a list of the seeds and plants needed, taking in account the size and capacity of your family and its preferences as to varieties, etc., the probable water, manure and labor supply for the coming year. Don't try to raise more than you can care for.

Plant in rows the long way of the garden, not in beds. An exception is corn, which, in a single row, is liable not to pollinate. Therefore plant it in blocks.

Put the tall, dense crops—corn, pole beans, etc., at the western end where they will shade others the least—that is, from the afternoon sun.

Keep together the perennial sorts and next them the all season varieties such as carrots, salsify, parsnips, etc., and plant the others in succession in the order of time of maturing, for convenience in working the ground for a second crop.

Let us consider for a moment what is to be aimed at in a vegetable garden:

First of all of course is table quality; then continuity of supply—you will want as many things for as long a time each as possible—but you will need to guard as carefully against getting any one of them in such abundance at any time that it will go to waste; and thirdly you want your garden to go as far into winter as possible.

Now what is the way, you or any one else, naturally figures up this garden stuff? By the row, not by the ounce or pint of seed. If last year you planted 4 rows of early beans and had more than you could possibly eat as soon as they began to ripen; and only two rows of early sweet corn, and found that there was not enough of that so you could have a third helping when your friends came into dinner—then you have got something definite to work upon in figuring out this year's garden. Probably two rows of beans and four of corn would come nearer the mark. And using two varieties of beans and two of corn to furnish a succession from the same planting would be still more satisfactory.

Now take a pencil and paper and after each vegetable which you expect to have in your garden, put down the number of rows you think you will want. Then knowing the length of your rows, you can easily figure out about how many lineal feet of row or drill you will have to buy seed for. Most catalogues will tell you how many feet of row an ounce or pint of the

different seeds will plant. In estimating the amount to buy you must keep in mind the ones which you will want to plant several times to give a succession throughout the summer, such as radishes, as early corn, lettuce, etc.

All the seed catalogues give directions for planting and caring for the different vegetables, but there is one thing you must keep in mind when watering a garden during dry weather. That is to soak the ground thoroughly once or twice a week and not sprinkle the surface every day. Where the surface is sprinkled only the top inch or two of soil is moistened and the roots grow near the surface where they will easily be killed by the hot sun. Instead of sprinkling, the hose should be laid on the ground and let the water run in furrows alongside the rows, until the ground is thoroughly wet down to the moist earth.

In growing a garden as well as producing all other crops keep in mind the four principles of increasing crop yields—careful preparation of the soil. Good seed carefully selected and tested for germinating capacity. Thorough, frequent, shallow cultivation, and proper fertilizing

Eight to twenty loads of well rotted

barnyard manure may profitably be used on garden soil, and two tons of ground limestone per acre will be beneficial. It should be applied to the surface after the land is plowed and then harrowed in. A liberal quality of a high grade, complete fertilizer may be profitably used also. The safest way to use it is to spread it in the furrow where the row is to be and then work it into the soil with a cultivator before planting. Nitrate of soda spread on the surface beside corn and harrowed in when the corn is knee high and again when it is beginning to tassel has proven to be very beneficial. Nitrate of soda worked into ground beside potatoes which were nearing maturity has caused them to grow for two weeks longer with a material increase in production.

GROWING EARLY TOMATOES

Just to prove to our friends and neighbors that "tomatoes" can be made a profitable crop, I relate this:

After having grown tomatoes several years with but indifferent success my mother decided to raise a patch of her own and do her own bossing and work except plowing. She decided the profit was in early and not late shipments. She rented $\frac{3}{4}$ acre of very good soil, had it planted and fertilized under her own direction ready for the plants.

other growers, she set this patch in tomatoes two feet apart, making about 3,000 plants.

Our neighbors believed mother's plants would be killed, laughed at the idea of raising such early tomatoes.

After the plants had taken root and blizzard and it seemed we would lose all the plants, but mother gather up four men with hoes and covered the plants with dirt. This proved successful and the following day we were able to uncover them. Altho' they looked very ragged and bad mother never gave up.

They soon began to grow out and we were not bothered again with cold. The plants were topped, leaving two clusters only; this making them about two weeks earlier and a prettier patch of tomatoes I have never seen.

Mother was one of the first shippers and the scarcity caused them to bring a good price, which they did as long as they lasted.

Besides selling to the neighborhood and town we had plenty to use, give away and feed to the hogs.

After freight charges and fertilizer bills were paid she cleared \$128.65 off $\frac{3}{4}$ acre of land. Considering the time and expenses which were very small, I consider this a very profitable crop.

L. A. H.

HOW ONIONS PAY

In reading over your topics of profitable crops, I must say I enjoy them very much and receive many good suggestions.

Our most profitable crop consisted of one-half acre of onions. The ground was well fertilized with barnyard manure and then plowed in the fall. In the spring, as soon as the ground could be worked, one and one-half pounds of salt was applied and well worked into the ground.

In April the seed was drilled in rows thirteen inches apart, allowing four pounds of seed per acre (the seed being drilled in the dark of the moon).

We weeded them three times, besides scuff-hoeing them. We harvested 150 bushels of good onions, selling them at \$1 per bushel, and about seven and one-half bushels small onions at 60 cents per bushel. Scullions we did not keep track of, but sold them for 10 cents a crate on the ground as long as they lasted. Even at this price we could not meet the demand, as onions were very scarce in this part of the state. (Besides this we raise sweet corn, cucumbers and other garden truck to sell.) We began pulling out the thick-necked onions from the patch as soon as they got big enough to tell from the others, selling bunch after bunch while green for 5 cents a bunch.

We considered this our most profitable crop this last year, as the other crops did not do as well accordingly on account of the drought.—Mrs. J. E. H., Michigan.

A New Idea in Farm Schools

A township club has been formed in a town of the twenty-three townships of Mill County, Illinois. F. C. Granis, the agricultural agent for the county, has arranged for holding a two-day agricultural school in each township, under the auspices of the township clubs. Lecturers will be secured and as much active demonstration work will be done as conditions will permit.

Stung

"Pretty nice land around here," said the stranger, as his dusty rig stopped in front of the gate.

"Certainly is," replied the eager farmer. "Finest in the state."

"I reckon it is too high priced for a poor man," sighed the stranger.

"Well," replied the farmer, "it is worth every cent of \$200 an acre. That's the way I value it. Were you thinking of buying?"

"No," replied the stranger as he dotted something down into a book, "I'm the new county assessor."

When You Are Motoring You Must Have "PIPER"!

Eating up the road—nerves a-tingle—wish you had some tobacco. You can't smoke *then*. Your two hands are busy; you can't have ashes flying in your face; you can't light up without stopping. A hundred reasons.

What's your old pal yelling in your ear?

"Take a chew of 'PIPER'. Beats smoking anyway!"

PIPER Heidsieck

CHEWING TOBACCO—Champagne Flavor

In this way thousands of men have made the discovery that there is *more solid, satisfying enjoyment* in chewing PIPER Heidsieck than in any other form in which tobacco is used.

The *rich, wine-like flavor* that distinguishes PIPER

Heidsieck from all other tobaccos, comes from the ripest, mildest, mellowest tobacco leaf, carefully selected from the world's choicest crops. This delightful, lasting flavor completely *satisfies the taste* as nothing else can.

FREE Send 10 cents and we will send a full-size 10 cent cut of "PIPER" and a handsome leather pouch FREE. The tobacco, the pouch and mailing expenses will cost us 20c and we are glad to spend the money to get you to try "PIPER" just once. We know that once you have started, you will become a permanent friend of this wonderfully wholesome, healthful and satisfying tobacco.

(This offer applies to U. S. only)

In writing us please tell us the name of the dealer or whom you buy your tobacco.

Our Country Contributors

Semi-Monthly Prize Letter Competition:

First Prize \$3.00 Second Prize \$2.00 Third Prize \$1.00

This department is designed to induce subscribers to contribute accounts of their farming experiences, their most profitable crops, or their ideas on any subject of general interest to farmers. Every farmer is invited to contribute an account of his most profitable crop, telling what made it so, in figures and facts. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell your story in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, UP-TO-DATE FARMING, Indianapolis.

THE MOST PROFITABLE CROP.

(Awarded First Prize of \$3)

That crop is the most profitable for which the land hath been properly prepared, thoroughly cultivated and then fed on the farm in a manner to bring best results to the farmer. It may be, as in the writer's case, a few acres of corn to supply the need that only King Corn can supply, as the large portion of the farm team's ration, feed for the fattening hogs to supply the farmer's table, a good constituent of the poultry ration. These are the ways to get returns in ready dollars and have an eye to soil improvement. That has been woefully neglected on many sections of our fair land.

A few acres seeded to oats in March if conditions will allow, the land having been covered with compost and plowed in the fall. This assures a crop and harvested as hay, placed in the mow, will be of great value should the corn crop be drouth-stricken.

A few acres of wheat on properly prepared lands assuring bread for the farmer's family and a good poultry ration might be the crop most profitable. The writer came to the farm that he hopes to make a home not to be despised eight years ago; an old washed hill farm, large portions, gullied and fairly creeping as the alternate frosts and thaws wrought their work; the outlook was all but encouraging, but with courage akin to that which dominated Napoleon, who, when told by his engineering corps, that the Alps stood in his way, made reply: "There shall be no Alps." I thought "There shall be no gullies." Well, I have been successful in part, but am on fighting ground, going forward, buoyed by that magic word, "Hope."

This is my way of healing washed land: I commence cutting corn in the fall as soon as it is profitable feed for fattening hogs. My hogs are fattened and killed before the blasts of winter are here. I try to have the fodder nearby the places I wish to improve and scatter it on the frozen ground in the early morning and the cattle have the stalks clean before the ground thaws; they return later in the day and tramp the stalks into the ground. Fed this way for two successive winters and you have sufficient soil to get a stand of grass and a permanent pasture is assured and who will say that a good pasture is not first cousin to a good crop. I now have bluegrass growing on the gullies of eight years ago. I realize the fact that the man who owns his broad and fertile acres is not confronted by the problems to which I and thousands of others in like circumstances are subjected.

I think all honor due the men and boys who are reclaiming lost farms and helping to make beautiful old Earth, the Creator's footstool.—J. H. Blythe, Kentucky.

TOMATO PROFIT

(Awarded Second Prize of \$2)

The plot I gave last year to this vegetable was 22x11 feet. The rows were twenty-six inches apart. The plants set 2 feet, 2 inches apart. This gave fifty plants. Now each healthy, vigorous tomato plant should produce three pecks of tomatoes during bear-

ing season.

When placing manure or fertilizer in hills or rows, place on the upper or elevated side of the plant as it leaches down.

The ground should be plowed as early as it can be worked in the spring and manure broadcasted. The plants can be home grown and transplanted. Where each plant is to be set form a hill and place a pint of chicken droppings or chemical fertilizer about eight inches above the root of the plant and a short distance from it. If your fertilizer is high-grade and strong, use only one handful to each plant.

Set plants on the south side of the hill, not in them, but on the edge on ground level. Plants in hills dry out more quickly than on ground level and the hill is for protection from cold.

A branch of cedar placed firmly beside each plant protects from early frost. Any evergreen is frostproof. Last May an unexpected freeze formed a frozen crust in our garden, but the tomatoes set early in April were all right under their evergreen covers. Where evergreen can not be had protect with newspaper or inverted tin cans.

After frost danger, remove the cedar branches and cultivate as needed, keeping all weeds down. When the bloom appears set a stake five or six feet high to each plant, tie as the plant grows with soft cotton strips; keep the suckers pinched off. When dry water freely after sunset. Never water in strong sunlight.

The tomato has few insect enemies. The first green worms that appear should be promptly killed. Tomatoes should not be grown on the same plot of ground season after season. Any plant whose bearing season is long is hard on the soil and should be grown in different places.

If you have room for only a few plants they can be set near a fence and no stakes will be needed as they can be trained to the fence. The material for stakes is often at hand.

Our itemized expense for fifty plants follows:

	COST
Plowing and manure.....	\$.75
50 stakes at 2½¢ each.....	1.25
Plants50
Total cost	\$2.50

Sold from June 22 to 30 ripe tomatoes at 8 cents per gal.	
two gallons amounted to.....	\$1.60
Sales for July.....	11.20
Sales for August	9.00
Sales for Sept.....	3.85
Canned for home use 45 qts. at 10¢ each	4.50
Three doz. bottles catsup, at 10¢ each	3.60
Green tomato pickles, 4 qts....	1.00
Green tomatoes sold.....	.80
Total	\$35.55

Tomatoes for table use for a family of five not included.—Mrs. C. C. M. Vinton, Virginia.

International Harvester Oil and Gas Engines

Successful farmers are no longer asking "Shall I buy an engine?" They have passed that point and now inquire "Which engine shall I buy?"

You will be sure that International Harvester engines are the most satisfactory when you study features like the following: Detachable valve guides, offset cylinder head, fuel pump, split hub fly wheels, extra large intake and exhaust valves, etc.

Ask the men who have used I. H. C. engines. That is the best test. Study the engines yourself at the nearest dealer's where International Harvester engines are sold. They are made in all styles, and range in size from one to fifty horsepower. They operate on low and high-grade fuels.

Write for our interesting and instructive catalogs, and when we send them we will tell you where the engines may be seen. A postal will do.

SWEET CORN MY MOST PROFITABLE CROP.

(Awarded Third Prize of \$1)

About the middle of April I prepare from one to two acres of ground ready for planting. I cover it with manure early, have it ploughed deep, harrowed, rolled and marked out, and then if it is not too cold at that time I immediately plant it with an early variety of sugar corn. Ten days after I plant another plot of ground in sweet corn seed, planting the same way. Ten days after, I plant a third plot of corn, and keep on doing this till about the middle of July. In this way we have early corn, and ten days later more corn, and so on, always enjoying on our table sweet corn continuously. We never grow tired of it. We cook it three times a day, for breakfast, dinner and supper, for a family of ten persons. Imagine what a large kettle it takes to cook it in—for we like it "on the cob" best of all. Also imagine what it would cost us if we had to buy our corn to eat, as we husk from one and a half dozen to three dozen ears a meal! Also we have all we want to can, to dry or put down in salt. When the first crop is ready our boys pull a wagon load of it and take it to Columbus, 10 miles away, and sell it sometimes (at first) for 25c and 30c a dozen—later on, for 15c a dozen. They haul it every other day for weeks, as the different plantings ripen, until the last crop is used. We also sell in the village close by. Our telephone rings most of the time—people calling us up to order sweet corn. Our children carry over a few dozen at a time, and every day we sell from 25c worth to two dollars worth. During a good season, we have sold over \$200.00 worth. Often we raise some lima beans, early peas, tomatoes, etc., and these are good sellers; but our most sure and certain profitable crop is sweet corn. We use for the earliest planting the Premo; for the second earliest, the Kendal Giant; and for the general crop, Stowell's Evergreen.—Mrs. E. E. Evans, Reynoldsburg, Ohio.

DRY WEATHER OATS.

No crops were very good here this year on account of the severe drouth, which lasted from the twenty-third of May till late in September. Our best crop was an 11-acre field of oats the data of which I give below:

SOLD.
470 bu. oats at 50c.....\$235.00
6 tons straw at \$10..... 60.00
Total.....\$295.00

PAID:
30 bu. seed oats at 50c.....\$ 15.00
9 days with team filling at \$3 27.00
1½ tons fertilizer..... 33.00
For reaping and binding.... 10.00
For drawing and stacking.... 10.00
Threshing 470 bu. at 3c..... 14.10
Total.....109.10
Net.....\$186.90

Every farmer should keep an itemized account of each crop so that he may know from which he is getting the greatest returns for work and money expended. I keep an account money expended. I can tell just how much has been bought or sold in every line pertaining to the farm and home by referring to my books.—Ephraim Pierce, New York.

D. for balance and you may try the machine and if not satisfied money will be refunded. Write for catalogue. **CHICAGO FLEXIBLE SHAFI CO. 224 Ontario St. Chicago, Ill.**

PROFITABLE BEEF IN THE CORN BELT

Farmers and agricultural college experts are busily figuring on how to raise beef at a profit on corn-belt land valued at \$150 an acre. Many farmers, in view of the changes made in the tariff, and the recent increases of cattle importations, have concluded the task a dangerous if not an impossible one, and refuse to engage in the effort. Others believe that, taking the world over, more beef could be sold than can be grown, and that world prices will rule, regardless of the tariff, and are planning to try beef production for profit.

By proper care in breeding and feeding the production of baby beef can be made profitable, especially where one has pasturage and a good silo or two. Cattle can grow on grass, and a silo can turn a cornfield into beef at a low cost, especially when fed in conjunction with stover, cottonseed meal, clover or alfalfa hay.

The Aberdeen-Angus cattle are especially well adapted to baby beef production. Good breeding animals should always be procured. Though the cost may seem high, good animals are far the cheapest in the long run. One hundred dollars each for cows and \$250 for a bull is none too much to pay if the animals are procured from a reliable breeder.

As a rule calves should come in March, as at that time the fresh cow will give plenty of milk for her offspring at the first and the milk flow will increase when grass comes, and when the calf will be larger and be able to make profitable use of more. Then by July, when grass begins to fail, the calves will have a fine start and can use other feeds without any setback.

With the right care, calves should attain a weight of from 850 to 1,000 pounds when 12 or 15 months of age, and this is the most profitable time to place them on the market. Counting the profits in pork when pigs follow the cattle, and the value of the manure, baby beef should be a profitable farm crop on land valued at \$150 an acre.

HOW BLOOD TELLS.

The most profitable litter of pigs I ever raised were farrowed August 6, 1906, out of the noted Poland China brood sow Lady Keep On, No. 202,064, and by the great boar, Meddler, No. 99,999, winner of grand championship at the World's Fair at St. Louis, 1904. In June, 1906, E. H. Ware of Douglas, Illinois, had a Poland China brood sow sale and advertised, among other sows, Lady Keep On, and as I knew that Frank Brumback of Cisna Park, Illinois, was fitting a full brother to her for the Illinois State Fair, and knowing he was invincible I concluded to send a bid on Lady Keep On of \$100. Geo. M. Cantrall of the American Swineherd sprung my bid a little and secured the sow for me for \$115. The express was \$17.25. Total cost \$132.50. On August 6 she farrowed eight pigs, six of them alive. I knew the value of this litter and I was afraid she would lay on some of them, so for over a week I did not leave the pigs with her. Every two hours the pigs were allowed to get their dinner, then were taken away. I gave them every attention needed to put them in the best salable condition. In October the brother to my pigs, in the herd of Frank Brumback, took first at the Illinois State Fair and sold for \$3,000 to G. E. Leslie of Memphis, Missouri. This brought me many letters about the sow, Lady Keep On. The day before Thanksgiving, 1906, Mr. Ware came to my farm and I sold him Lady Keep On for \$350, one sow pig for \$142 and one-half interest in a boar pig for \$75. This pig afterwards killed himself in a fight. In January, 1907, I sold a boar pig to Wm. S. Davis of Worthington, Indiana, for \$75.

March 18, 1907, I sold a sow pig to Line Lukins of Disco, Indiana, for \$105

and one sow pig to F. M. Lail of Marshall, Missouri, for \$82.50. In December, 1907, I sold half interest in the last boar to Leslie McCormick of Laddona, Missouri, for \$350, making a total of \$1,179.50 for the sow and her litter, besides using one of the boars in my herd for some time. This litter had eleven producers of champions out of fourteen animals, shown in the first three generations of their pedigree. There's a reason.—Edwin Alphonso, Union, Missouri, R. R. 1.

LIVE STOCK NOTES

There's a lot of fun in watching properly fed pigs, calves or lambs grow.

The dairyman who constantly thinks of his cows, talks of his cows and even dreams of his cows makes much money.

Whether sheep and dogs can thrive in the same neighborhood depends wholly upon the character of ALL of the dogs.

Alfalfa and exercise is a splendid combination for brood sows at this time of year. Plenty of alfalfa, but not too much exercise.

The big majority of farmers who have stock that is registered are making money. This is a hint to those who have no pure-breds.

By means of a silo the sweet juiciness of the corn is kept through the winter, and a good dairy cow turns it into dollars. Build a silo.

Scatter a few oats about for the brood sows to pick up. Not too many, on account of the coarse hulls. A small ration of oats, however, will help the sows bring forth fine pigs.

The Simplest CREAM SEPARATOR Ever Built — DE LAVAL

EXCELS ALL OTHERS not only in thoroughness of separation, sanitary cleanliness, ease of running and durability, but as well in its great simplicity. THERE IS NOTHING ABOUT THE OPERATION, cleaning, adjustment or repair of a modern De Laval which requires expert knowledge or special tools. NOR ARE THERE ANY PARTS WHICH REQUIRE frequent adjustment in order to maintain good running or to conform to varying conditions in the every day use of a cream separator.

Combination Wrench, furnished with each De Laval machine, which is the only tool required in setting up, taking down or using the De Laval, the simplest cream separator ever built.

THERE IS NOTHING ABOUT THE MACHINE THAT cannot be taken apart, removed or replaced by anyone who can use a wrench or screw driver. In fact, the only tool which is needed in the use or the operation of a De Laval Cream Separator is the combination wrench and screw driver illustrated above, which is furnished free with every machine.

The De Laval Separator Co.
 NEW YORK CHICAGO SAN FRANCISCO SEATTLE

50,000 Branches and Local Agencies the World Over

LISTEN! Read This Twice

For five months starting February first I am going to make my New Special Proposition to every dairyman in this country on the New Genuine Galloway Sanitary Cream Separator. It's a combination offer. Its equal has never been made in the history of this country. I not only save you dealer's, jobber's and catalog house profits but I sell you a better machine and give you a bonus as well to try it, which shows my faith in my separator, my proposition and my plan.

No such offer as I make on the class of separator I sell has ever been made.

The New Galloway Sanitary Cream Separator

is made so good in my factory that I will send it anywhere in the United States without an expert to any inexperienced user for a ninety day free trial to test against any make or kind that even sells for twice as much and will let the user be judge, because it's the most modern—the most sanitary—the most scientific—the cleanest skimmer—the most beautiful in design of any cream separator made today and I have seen them all. Write me and I will tell you how to make money in the dairy business when the pastures are dried up in summer. I did it on my own farm and know. Get my proposition now. It's so good that no dairyman who owns two or a hundred cows can afford to be without it. All I ask you to do is to first get my proposition before you decide to purchase any cream separator of any make, kind or at any price. Just drop me a postal. Address:

Successful Artificial Incubation

By L. G. Shepard

First see that all trays and burlap coverings on bottom of machines are thoroughly cleaned and disinfected. Remove trays from machines and wash them in a 10 per cent solution of carbolic acid. Remove burlap from frames and wash thoroughly. Clean away all down which accumulates under burlap and when burlap has thoroughly dried replace same on frames with tacks the same as you found it. If burlap shows wear replace with new. Wash the inside of incubator thoroughly with 10 per cent solution of carbolic acid. Clean lamps thoroughly, boil lamp burners and put in new wicks. Clean all heaters by using a rag on a stick the same as you would to clean a gun. Now replace all trays

and burlap, fill your lamp, see that the wick is properly trimmed so as to give a good even flame with no sharp points when lighted. Place lamp in the machine and run from six to ten hours, then open incubator doors for a few hours, then close doors and regulate your machine to run on as low a flame as you can and have the proper heat 103 degrees for hanging thermometer, 102 for thermometer on tray with eggs. When you have your machine so it runs steady for three days you are all ready to start the hatch. When I have my flame regulated so machine runs satisfactory I always take a pen and mark a horizontal line on mica in chimney at top of flame, which is a great help in regulating flame when you fill your lamp. Now if you have properly cared for your eggs while saving for incubation and turned them each day, remove trays from incubator and fill them with eggs. See that eggs lay flat on side. Replace the trays in the incubator and leave them untouched until the third day, counting the one on which you filled the incubator. Then turn eggs twice a day. On the fifth day, if eggs are white shelled, make your first test and remove all eggs not found to be fertile. If eggs are brown shelled test on tenth day, as a brown egg is harder to test than a white one. Then in five days from first test, make another test and remove all eggs containing dead germs.

If room where eggs are to be tested is below fifty degrees fahrenheit, have a flannel blanket under tray and cover eggs with a flannel of two or three thicknesses so as not to chill the live germs in the eggs. When cooling eggs take an egg you know to be fertile, and place same to the eye; if it feels neither cool or warm replace egg in the machine. On the eighteenth day close the incubator and do not open until the end of the hatch.

At the beginning of the hatch, if moisture fails to appear on the glass of the incubator, moisture may be supplied by placing a pan of boiling water under the ventilators in bottom of the machine, but should not be done unless necessary. By this method last year I hatched one hundred and forty-two chickens from one hundred and fifty-six eggs and one hundred and ninety-two chickens from two hundred and five eggs. Of course I had good fertile eggs.—L. G. Shepard, New York.

A PERSONAL LETTER TO MARY (From H. H. Johnson.)

Dear Mary: Thanks for your frank, sensible letter about your idea of making money enough to buy your own clothes. I particularly like your idea of laying by a little something, not only for the rainy day, but for that sunny day when you and your future partner start a home of your own.

You didn't need to tell me that you would be glad to help out on the family needs if necessary. I could have read that between the lines if you hadn't mentioned it. A girl of eighteen doing what you are doing, taking hold of home responsibilities as you have, with a cheerfulness that makes things light for you and every one around—well, such a girl isn't going to be a disappointment to anyone.

Your training with the few chickens you have had for home poultry and eggs has laid a good foundation for bigger things. You will find an incubator practically as easy to care for as a setting hen. Instead of ten or twelve chicks you will get over 150 at one time and as you say, you will get some of them early in the season, long before the hen hatches are out. In that way you will get broilers on the market while prices are high, also you will have the pullets beginning to lay in the fall and keeping at it in the winter when eggs bring big prices.

I think your judgment is good in selecting one hatcher of the medium size to start with and one brooder to match. You will find a machine of this size and its output of chicks as easy to care for as the smaller size. With the kind of attention I know you are going to give to the work, I feel sure you will surprise the folks on results. The whole bulk of your first investment will be less than the folks would pay for an extra cow, and in three or four months it will pay back its cost, and then your money for clothes and savings.

I don't think you will find it any hardship to add this little extra responsibility to your day's work. I don't mean that the chickens are going to take care of themselves entirely. If you succeed, as I want you to, you must give them good care, but it is pleasant work, outside work, healthful work, and I think you'll find it more of a recreation than a mere duty.

Faithfully yours,
H. H. JOHNSON.

To know that you know how to run your incubator is the finished education in artificial hatching.

NATURAL HEN INCUBATOR \$3
No freight to pay. Actual hen controls everything. No lamps, no expense, no costly mistakes. Over 600,000 sold. Thousands of testimonials. Agents wanted. Free Catalog with Special Introductory Offer.
NATURAL HEN INC. CO., Sta. H, Dept 7, Los Angeles, Cal.

"Jimmy, Always Give 100 Cents' Worth for Every Dollar You Get"

That's what my father said to me when I was a boy—and that's what I'm doing when I send you my Belle City hatching outfit. 276,000 users will tell you so. I am giving you more when you compare my 8-Times
World's Champion
140-Belle City
\$7.55
with any other incubator made. Double cases all over, best copper tank; nursery, self-regulating. Best 140-chick hot-water brooder. \$4.85. Both, \$12.50. Write for free book today or send price now and save time.
Belle City Incubator Co., Box 79, Racine, Wis.

7.35 LOWEST PRICE YET FOR BIG INCUBATOR
Think of it! The old reliable Progressive 155-Egg Incubator for \$7.35. Money back with 8 per cent interest if not satisfied. Wonderful bargain! Only incubator with hundreds of dead air cells. Copper hot water boiler, double disc regulator, deep nursery, double doors, egg tester, safety lamp—every big feature—all for \$7.35 freight prepaid E. of Rockies. Incubator and Brooder ordered together, \$9.85. Send your money now, or, if you want more facts, write for our Big Free Book. **PROGRESSIVE INCUBATOR CO. Box 146 Racine, Wis.**

Mrs. Farmer, Listen to Me!—Why Fool with Setting Hens?
Is there anything more exasperating than an old "Settin' Hen"? How foolish it is to try to raise chickens "by hand," when the **Sure Hatch Incubator** is waiting, ready to do the work easier, cheaper, better—at any time, January, March or June!
I build a good, practical hot-water heated incubator, that will hatch even if the room is at freezing temperature. I'll send it to you by first fast freight the day your order is received.
You can make a hatch and prove its success to your own satisfaction.
We are reliable; have been in business sixteen years, and back our machine with a strong 5-year guarantee. You should have poultry on the place to pick up feed that would otherwise go to waste. The Sure Hatch Incubator will enable you to hatch chicks in winter, to get the highest early Spring prices. Machine will be shipped to you by first fast freight the day your order is received.
A postal card brings you by return mail my Big Free Catalog, giving full description of Sure Hatch Incubators and Brooders; also prices of the different sizes.
Frank Hammond, Pres. & Mgr. SURE HATCH INCUBATOR CO. Box 28, Fremont, Nebr.

U.S. POULTRY BOOK
The Most Valuable Poultry Book OUT! My U.S. Poultry Book is a wonder. No other book like it ever printed. Tells Why Chicks Die

J. C. Reefer, the poultry expert of 1609 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should write Mr. Reefer for one of these valuable FREE books.

Half a Million People Are Making Chicken Profits with Johnson's Old Trusty Incubator—This is because the Old Trusty was invented by an engineer who knew chickens. It's made of finest materials in Johnson's own factory where top notch results are obtained at lowest cost. Huge output, brings the price of Old Trusty within the reach of anyone. Saves you about \$5.00.
This Year's Price Based on 100,000 Sales
Write at once for Johnson's price to your station—freight paid. Get started making poultry profits this year. For many years Johnson advertised his price "less than \$10"—this year it is still less than \$10 delivered east of Rockies. Only a trifle more clear to Pacific Coast. And Johnson ships promptly, ready to use.

Mankato Incubator Co., Box 718 Mankato, Minn.

"If I were buying a dozen incubators they would all be Queens."
C. E. GRAGG, BUTLER, Mo.
Mr. Gragg wrote after he had taken off two 95% hatches. The grand record of the

Queen Incubator
is built on service. You can depend on good hatches every time you fill it with fertile eggs. I build honestly, so your machine will last many years. See my 1914 Model with its 28 Special Features. Paying a higher price for other incubators will not get you a better hatcher. Send for finely illustrated 1914 catalogue.
P. M. WICKSTROM, Incubator Man Box 19, Lincoln, Neb.

RAYO Cuts Down Expenses—Does Away With Labor—and Makes \$179.40

"I am sending my order for another Rayo. The returns from my Rayo last year checked up over 500 chicks that lived to produce. Sold 45 cockerels from the lot from \$2 to \$3.50 each; most of the rest I marketed as broilers at 1 and 2 lbs., at an average of 30c per lb. Figuring it up, I find the Rayo made \$179.40 net for me. The machine took very little of my time, and I can recommend it to everybody who wants to make money in the business."—Roy Best, Waverly, Ohio.

What the RAYO Has Done for Others—It Will Do for You

Get one and beat your neighbors' hatches and make more money. The Rayo boosts profits, slashes expense, cuts out the drudgery, over old-style, lamp-on-the-side machines. Requires only 1 filling to hatch. Runs on 1 gal. of oil; others use 5 gals. Runs with little attention; others need constant looking after. The Rayo does all its work automatically. Hundreds of experienced poultrymen will have no other machine. Beginners sure of success. Low, direct, freight prepaid prices to all.

All Three FREE
Money-Making Book and sample of first and only Patent Hatching Chart free to everybody on request. Complete chart and \$1.50 Hygrometer free to all new Rayo purchasers. Ask for Book No. 14. It tells how to Turn Eggs Into Chickens Into Dollars.
Rayo Incubator Co. 1039 S. 13th St., Omaha, Nebr.

Garden and Orchard

FROM A GARDENER'S NOTEBOOK

Asparagus is one of the first and one of the best vegetables that grows. If you haven't a bed, get one ready this spring.

One or two-year-old roots give best results, but are more expensive. A rich sandy loam soil is best for them. Make rows four feet apart, placing roots fifteen inches apart.

In planting asparagus roots make a deep furrow and put a layer of well-rotted, rich barnyard manure in the bottom of the furrow. Use plenty of good fertilizer.

Some seed houses call string beans a "farinaceous" food. Call them hard names if they will, but there's no more delicious vegetable grows in my garden. The Early Red Valentine and the Refugee are still general favorites, and, as Mr. Post would say, "There's a reason."

Yes, it's more trouble to plant poles for pole beans than to plant them with corn, but we prefer to grow them in the garden and put poles up. We think it pays in returns. Now is the time to cut poles.

A good garden plow, hoe and seed drill is a most excellent tool and a time saver. Get one and get a good one while you're getting. An inferior machine of this kind is an abomination.

I have found the responsible seed houses, as a rule, most courteous, kind and helpful, if there's any information about varieties, culture, etc. You will find them so. Write them of your gardening problems.

Don't be in a hurry to plant cauli-

flower or Brussels sprouts for home use. Sow the seed in May and transplant in July. Confine your early spring endeavors to early cabbage.

Don't neglect to prepare that portion of the garden where the cabbage will grow very rich. To get tender, juicy, fine-flavored cabbage, and get them in spite of worms, make the land rich.

If you are to have egg plant, don't wait too long to sow the seed. Get it in the hotbeds early.

It is easy to transplant lettuce. Sow seed in hotbed, or in a box in the house, for very early use. Denver Market is an excellent variety for this purpose.

The seventeen-year locusts are due this year in West Virginia, so fruit growers in that state having young orchards (trees two to four years old) should not prune this spring. Orchards planted this spring will be badly stung.

Save the tin cans and melt off the tops and bottoms and the solder at the sides. Tie the cans in cylindrical form with a string and fill with rich earth. Then plant the seed of your early vegetables, and when time comes for transplanting there will be no check in the growth. Make a hole for the plant, untie the string, remove the can and put dirt, plant and all in the hole, firming the ground all around.

RAISING, PICKING AND SELLING STRAWBERRIES.

In the winter of 1909-1910 I left New York to take up a claim in New Mexico. I had been a raiser of strawberries for several years and when I left the East my brother and I had about an acre of this fruit which would be ready for harvest in June. Of this only half an acre was new set. The rest had produced one crop in 1909. After picking we had plowed out the rows with a cultivator and rooted out the weeds as much as possible. However, an old bed seldom pays only about half as much as a new one.

The new bed had been set in the spring of 1909. The ground had been well fertilized with barnyard manure plowed in, and the weeds kept us busy during the summer, but we kept the patch clean. The first runners were kept cut so as to throw all the strength of the plant to the production of good vigorous crowns. In August I began to allow some runners remain, usually four to each plant keeping them in the rows by laying stones on them. This kept the rows even and not too broad. By winter the rows were about ten inches across and well filled with plants. We did not mulch till spring when some straw and litter from the stables was put between the rows to keep the berries from the soil.

In June I returned from New Mexico to help harvest the crop. When I arrived I found the picking under way and immediately took charge of the marketing end. The patch was located about six miles from Olean, a city of about 16,000 and a good market. My berries had to compete with berries from nearby sections where conditions were more favorable which were shipped in by a commission house and sold at from two to four cents cheaper than home grown fruit. Yet I seldom had any trouble in finding a market. I make two trips nearly every day, often having 300 baskets per trip. The price averaged between 8 and 9 cents. I sold to grocers almost entirely as the crop was too perishable and the work too rushing to permit of peddling direct to consumer.

The picking was all done by hired pickers, mostly women, girls and boys from neighboring farms who were glad of a chance to earn a bit of pin money. We paid 1 1/4 cents per quart for pick-

ing. A picker usually picked about 100 quarts per day, often much more. Every night we gave each picker a basket of berries to take home. That this favor was appreciated was shown when the picking became poor—our pickers remained loyal.

My brother was overseer and gatherer. Busy days sometimes saw as many as 10 to 12 pickers in the patch and one man would be kept busy gathering the baskets. A carrier holding 12 baskets and fitted with a handle was used. They were gathered as soon as picked to prevent sun scald and taken to a tent at the edge of the field where a "crater" packed them into crates ready for market.

A strict account was kept of every basket picked and sold. The season lasted 20 days. At the end of that time we reckoned up and found that we had sold exactly \$500.00 worth of berries, of which amount it took an even \$100.00 to pay our pickers and other expenses. This left us each \$200.00 to the good. So I can safely say that my most profitable crop was my crop of strawberries of the year 1910, grown on less than an acre of stony hillside.—Roy A. Wiley, Santa Rosa, New Mexico.

Woman's Work and Welfare

Helpful Hints for Homemakers

Fireside Social Chats

By Aunt Sophia and Others

SISTER, as the old negro Baptist preacher was wont to call the feminine portion of his flock, I want to introduce a newcomer who comes forward with a very helpful suggestion on the conveniences of closets. Her article reminds me of a post scriptum added to a child's effort at composition by a friend of mine, a mother whose little son was undergoing the agony of his first lessons at school in English composition. Frederick was instructed to compose a sentence, using the two words, "house" and "closet." His unaided effort resulted in this:

"A house is a lot of rooms with some closets stuck around."

His mother, with a quizzical smile, added: "And a really good house is a lot of closets with a few rooms stuck on."

Closet reform is a good movement, and let's push it along.

Heart problems: Some one wrote me a letter and asked me to invite our fireside club to come forward with their heart problems, because matters of the heart are uppermost in the mind and the heart is the seat of woman's existence. Well, now, Minerva, what am I to say? I suppose if what you say is true, and the heart is the one big organ in which we womenkind think, and move, and have our being, almost every problem that confronts us, from dishwashing to divorce, is a heart problem, isn't it? And perhaps you are partly right in this. But I wonder just what you did mean, particularly, by your "heart problems." If it is the kind of stuff we find in so many papers, where some lady with a high-sounding title tries to outwit Cupid in his career of "rule or ruin," I'm not sure they are heart problems at all. Young folks' love affairs are more problems of bright eyes, curly hair, ruby lips, holding hands and things of that sort than problems of

the heart. I rather doubt our wanting to run the young folks out of the cozy corners and bringing them to our fireside chats would be quite fair to either them or to us. But, let me say here, if we can have real heart problems, those which grip us and sway us, make us or break us, let's have them by all means. If we only knew each other better by heart the world would lose much of its misery.

AUNT SOPHIA.

CLOSETS AND COOKS

By Lady Louise

When a man thinks of building a new house he thinks of sitting rooms and porches; his wife thinks of kitchens and closets. The man wants a good sitting room and plenty of porches. The wife wants a good kitchen with a cellar attachment and plenty of closets. No matter how many closets a house may have, there's never enough. Men make fun of them, but I know of no more important feature about a house than its closets.

Carpenters and architects may know all about planning and constructing dwellings, but I've never found very many houses that were sufficiently or sensibly equipped with closets. I don't mean those black little stuffy cubby holes in a corner or beside the chimney that are sometimes called closets. I mean a real, light, airy, sweet-smelling, capable, capacious closet—the kind every woman prays for, but sees only in hope.

I want a window in every closet, and I am fortunate enough to have them in my home, but the architect who planned it actually thinks I'm demented or obstinate beyond all reason. But light and ventilation are quite necessary in them if they are to be what we want them to be.

I believe in having closets for each of several purposes, if it can be done. Clothes closets off the bedrooms, a linen closet off the dining room, a coat closet and one dark closet for woollens, practically air tight, and if you want it moth proof line it with cedar shingles.

It is amusing to read about the troubles the city people have with cooks. It isn't a bit amusing to them, I imagine. We who live in the country and do our own work, being our own cooks and delighting in the task, have no trouble with the cook problem, except to satisfy the astounding appetites the men folks bring with them to their meals. May I tell you how I make a few of my favorite winter dishes?

Celery Fritters

Cut celery stalks in cubes, put in boiling salted water until tender. Cool, then dip into a fritter batter made of a cup of sifted flour mixed to a thin batter with the well-beaten yolks of two eggs, half cupful milk, a tablespoonful of olive oil, and salt and pepper. Add the whites of the eggs beaten stiff. Fry three minutes in hot fat.

BOILED CORN MEAL PUDDING

To a quart of buttermilk add soda to sweeten, and a well beaten egg. Add a cup of raisins or any other fruit liked, also a half cup of molasses, or sugar, one teaspoonful of salt. Thicken with meal. Do not get the batter too stiff. Have ready a pudding bag, or a square of heavy muslin will do. Seal, then roll in flour and pour in the batter, tie securely and drop in boiling water. Boil steadily three hours. Dip the pudding and bag in cold water a moment before turning out. Serve with cream and sugar, flavored to suit.

Gold Wedding Ring Given

Send just 25c to pay for a one-year new, renewal or extension of our big home and story magazine—enclose extra for mailing, 50c in all—and we will send you by return mail this very fine 14K gold filled heavy band ring. Address Household, 20 Capital Bldg., Topeka, Kan.

Agents Wanted

Either sex, to sell our silver handle Embroidery Needles. You are as sure to do well as the sun is to rise, if you follow our advice. Our claim of having the best article for agents is backed by \$5,000 reward for anything better. Write for terms. Address WHALE ART COMPANY, 6152 Virginia Ave., St. Louis, Mo.

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing success. The paper fills the bill without emptying the purse; it costs but \$1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. Or send \$1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

POST CARDS GIVEN

AND ALBUM

To quickly introduce our up-to-date farm and home magazine and our line of post cards, we will send samples of our choice high-grade, artistic souvenir post cards, and this handsome post card album with fancy colored cover, black leaves and our illustrated paper three whole months, all for only 10 cents, silver or stamps, if you answer this ad immediately. Valley Farmer, 22 Capital Bldg., Topeka, Kan.

Crooked Spines Made Straight

You need not venture the loss of a penny. No matter how serious your case, no matter what else you have tried, the Sheldon Method will help you and probably wholly overcome your affliction. We are so sure of this that we will make a Sheldon Appliance to suit your special condition and let you decide, after 30 days, whether you are satisfied. We make this unusual offer simply because the 15,000 cases treated absolutely prove the wonderful benefit the Sheldon Method brings spinal sufferers, young and old.

Use the Sheldon Method 30 Days at Our Risk

There is no need to suffer longer or bear the torture of old-fashioned plaster, leather or steel jackets. The Sheldon Appliance gives an even, perfect and adjustable support to the weakened or deformed spine and brings almost immediate relief even in the most serious cases. It is as easy to put on or take off as a coat, does not chafe or irritate, is light and cool.

The price is within reach of all who suffer. Send for our free book and describe your case as fully as possible so we can advise you intelligently.

What is Now the Fashion

6572. LADIES' SHIRTWAIST.—Very neat and smart. It may be made with high or low neck, but the low cut is better, and in this case the wide collar is used. At each shoulder in front there is a small tuck, which gives a little ease to the material at the bust. The closing is in front and a plain sleeve completes the garment. Sizes 34 to 44 inches bust measure. Medium size requires 2½ yards of 36-inch material.

6561. LADIES' PLAIN SHIRTWAIST.—A plain tailored model, such as this one, will be liked for business or school wear and is also suitable for the home in the morning hours as well as for shopping. This waist is high in the neck, which is finished with a band and may be worn with various styles of collars. The closing is arranged in front with a box pleat for studs or buttons. In the back this waist has a shallow yoke, which is applied and may therefore be omitted if preferred. Regulation shirt sleeves complete the waist. Sizes 34 to 44 inches bust measure. Medium size requires 2½ yards of 36-inch material.

6562. LADIES' THREE-GORE SKIRT.—A model skirt which is cut with three gores. It may have either high or regulation waistline. In the back the upper edge is gathered and in front it is plain. There is a graceful drapery suggestion at the line of closing in front, at about knee depth. Sizes 22 to 32 inches bust measure. Medium size requires 2½ yards of 44-inch material.

6568. LADIES' SKIRT.—A simple model which is given a dressy effect by the use of a tunic in front only. The model has three gores and may have either the raised waistline or the normal finish. Sizes 22 to 32 inches waist measure. Medium size requires 3½ yards of 44-inch material.

5523. LADIES' HOUSE DRESS.—House dresses are always made on simple lines and such a model as that shown in No. 5523 is in line with the taste of the hour. This dress has a simple blouse with a side front closing and a seven-gore skirt. Sizes 32 to 44 inches bust measure. Medium size requires 4½ yards of 44-inch material.

6552. LADIES' HOUSE DRESS.—This dress is less plain in character and can be worn in the street as well as in the home. The blouse is ornamented by a handsome collar and revers and has a small chemisette. The skirt is made with three gores. It is gathered across the back and has a side front closing. Sizes 34 to 44 inches bust measure. Medium size requires 4½ yards of 44-inch material.

5658. LADIES' COSTUME.—Quite dressy in appearance and suitable for figured or plain materials is this costume. The revers and the chemisette make this dress effective, for the bodice is otherwise plain. The skirt is a three-piece design and it has a long, loose panel in the back, which can be omitted or shaped to resemble a sash. Sizes 32 to 42 inches bust measure. Medium size requires 5½ yards of 36-inch material.

6553. CHILD'S APRON.—The children are provided for in the remaining designs of our group. No. 6553 shows an apron which will be suitable for school wear made of gingham or of crossbar lawn. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 1½ yards of 36-inch material.

6581. CHILD'S FROCK.—This shows a pretty frock made on sacque lines. This has a diagonal front closing, edged with a handsome collar and revers. The sleeve is long, in the new bishop style, but may be shortened as shown. Sizes 2, 4 and 6 years. Medium size requires 2¾ yards of 36-inch material.

6559. CHILD'S FROCK.—This model is one of those frocks which have the unbroken line from shoulder to hem, the dividing line being made only by the girdle or belt. The front closing extends to the neck and a pretty collar trims it. Sizes 2, 4, 6 and 8 years. Medium size requires 1½ yards of 36-inch material.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

A CHATTY LITTLE LETTER FROM IDAHO

Dear Aunt Sophia:

I have a few words to say to the women readers of our paper. I read nearly everything in UP-TO-DATE, and think it one of the most valuable papers agriculture has. I am much interested in its work for better marketing, which will mean more comforts and conveniences for our farm homes. I love farm life, run as it is, but when A. Y. Satterfield, the national organizer of the Farmers' Society of Equity, organized a local union here last fall, I became enthused with the visions of farm life as it might be and can be.

I have a recipe for a sauce I think delightful. Add one part seeded raisins to two parts cranberries, and see what a delightful change you have produced.

I keep beets, turnips, carrots, etc., from wilting by packing sand around them when placing them in the cellar.

Wishing all the readers of this paper, as well as those who are working to make it, a year of success, prosperity and happiness, I am—Mrs. Frank Fisher, Arbon, Idaho.

Hunting and Trapping For Pleasure and Profit

TIM'S FAREWELL TALK

Well, boys, this is our last, for this season. We've had some good social campfire chats, and gained a number of good ideas for future operations. But the season has left us with but little beside these good ideas as substantial results.

Now, we'll hang the traps in the shed, hang up the guns, lay off the hunting coat, and until the north wind brings the snow again, we will give our thoughts to other things. But when Jack Frost feathers the wilds, we'll all be back again, and no one will be more pleased to hear from every one of you than

TIM.

REMINISCENCES OF BOB SNOW

(Concluded From Last Issue)

However, those fox sets Chief scorned proved very successful. The first morning I caught a fine red fox and during the next week I caught one more red and three grays. These five foxes were the only foxes caught in the neighborhood that year.

The days sped by only too fast. True, it was hard work keeping up the lines, but to us it was pleasant work. We had a calendar, but seldom looked at it. One evening Chief pointed to it with his knife and called my attention to the fact that it was the last week in February. Three more days till the last, which was the day we were to leave for civilization. Those three days were busy ones. We took up all short lines and part of the main lines, so that the day before we were to leave we had out only about ten traps each. That day Chief and I went out for a last hunt. We tramped around for half an hour before seeing game, and then it was in the form of a big 'possum sitting in a tree top. We were about 100 yards from him. Chief took the first shot with his .25 Stevens, but Mr. 'Possum still held his position in the tree. I took next turn with my .22 Remington and the 'possum fell off his perch. Upon looking at him closely we found that Chief's bullet had passed through his ear. The next day we took up all our traps, packed up our furs, took our guns and traps and hit the trail for home, to while the summer away and then to return to this little cabin in the heart of the great forest at the first "call of the wild," to live again surrounded by the wild things of the forest, for the big woods were our home.

BOB SNOW.

(The End)

Saving You \$220

On Reo the Fifth

This year we offer you a saving of \$220—of 16 per cent.

The 1913 Reo the Fifth sold for \$1,395, completely equipped, including electric starter. This year's car, even better equipped, sells for \$1,175.

Tires and electric starters both cost less this year. But most of this saving comes through factory policy.

Three years ago Mr. R. E. Olds built this great chassis as his final car. And he said that it marked his limit. Many thousands of these cars have been sold since then, and against each car we made a charge to cover all the machinery we bought to build this car.

Now that investment has been all wiped out. We now figure only factory cost, and the saving goes to our buyers. That is one result of building one perfect car and confining our output to it.

Streamline Body Electric Starter

This year we adopt the stream-

Reo the Fifth
Summer Series
Now \$1,175 Equipped

line body, which is now European vogue. This beautiful body is the coming type. The angle dash is going.

We use the best equipment made for electric starting and lighting. In every way the car's equipment is modern and complete. The finish is perfect. The upholstery deep and rich.

And this car alone has the one-rod control. No levers in the driver's way.

A Costly Car

Reo the Fifth is famous as an honest car. It is built throughout in a careful, costly way. We add in these ways to the necessary cost about \$200 per car.

The steel is twice analyzed. Our materials are made to formula. Our gears are tested in a mammoth crushing machine. Each driving part, as a margin of safety, is given 50 per cent over-capacity.

Each engine gets five long and radical tests. Close-fitting parts are ground over and over to give utter exactness. Nothing is ever hurried.

We use 15 roller bearings. We use 190 drops forgings to avoid risk of flaws.

Cars of this model are kept running night and day, covering thousands of miles, to reveal any possible weakness.

The result is the utmost in a well-built car. An almost trouble-proof car. Small cost of up-keep. A car built to run for years and years as well as it runs when new.

No car in this class compares with Reo the Fifth for a man who buys a car to keep. Thousands of men now know this.

Sold by a thousand dealers. Write for name of nearest dealer. Also for catalog.

Beautiful Sweet Roses

Everybody loves roses. They are easy to grow, and our sorts are free bloomers every month of the growing season. Nothing can equal or take the place of roses about the home. Start your roses this spring.

We have selected a choice collection and guarantee satisfaction. They will thrive vigorously in any ordinary garden soil and require little care. Read the description of these beautiful roses.

METEOR

For intense rich, velvety crimson color there is no other rose to compare with Meteor. A strong, sturdy grower, entirely hardy. It is always in bloom; fragrance is delicious.

RENA ROBBINS

The new yellow rose, which fills every requirement of the ideal garden variety. It grows to perfection in any soil and blooms continuously the entire season, bearing immense flowers of deep golden yellow, which assume rich creamy tints in their later stages of development. A rose of sterling worth; hardy everywhere.

LA FRANCE

Exceedingly sweet and handsome. An ideal garden rose, commencing to bloom soon after planting and bearing a great profusion of flowers all through the season. Flowers and buds are large and wonderfully beautiful, possessing the distinct delicious La France perfume; color is a lovely shade of soft, silvery pink.

WHITE COCHET

One of the finest snow-white roses. Lusty, rapid grower, producing a great abundance of large, full and firm, elegantly pointed buds, showing depth and richness as they open into magnificent pure white double flowers, possessing a distinct, exquisite fragrance.

ROSEMARY

A rose as beautiful and dainty as its name. Hardy, always producing strong, vigorous growth. Flowers practically all the time, having great masses of the most beautiful fragrant roses of rich silvery pink, exquisitely shaded.

EVERBLOOMING CRIMSON RAMBLER

The new production every one raves over, a real everblooming rose, Crimson Rambler. Plant grows rapidly, making shoots from eight to ten feet during the season, and covers itself with bright green, glossy foliage. Bright crimson flowers in great clusters are produced the entire season.

By arrangement with our nursery, plants will be sent at the right time for planting in your locality. Full printed instructions sent for planting and culture.

Our Offer A collection of these six fine hardy roses sent for a new or renewal yearly subscription at 50 cents.

Yours Free Send a club of four for the price of three, and thereby get yours free. This is a liberal offer.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER of EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

TO THE YOUNG PEOPLE the days may seem to move slowly, but very soon now the violets and roses will begin to smile at those who so like to see them. About the homes of many of our Cadets they are already in bloom, and the gardens are promising their annual supply of good things. Even the fields are beginning to get ready for an expected harvest. It is thus with all nature. Each day and night brings changes, sometimes imperceptible, but all leading to different conditions. For the Cadets of Equity there will be opportunities in the future years, but they will be different from the opportunities of today. Hence "Whatever thy hands find to do, do with thy might." Enjoy yourselves and help all you can in the great cause in which we are enlisted.

We will begin our letters this time with a nice little letter from Ohio:

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and I think every one should read it, because it is a farm paper that should be in every home. I have taken it for two years and will send in my renewal soon. I am also getting up a club and will soon have it ready to send in. I live with my parents on a farm of sixty acres and I want all of the Cadets to write. I will answer all, and will send photo to the first five that write.—Foster Sheller, New London, O.

A city girl expects to move to a farm soon, and, therefore, she likes to read UP-TO-DATE FARMING:

DEAR CADETS—My sister has taken UP-TO-DATE for more than three years and I like to read the Cadet letters and other things about the farm. I am a city girl, but I expect soon to go on a farm in Arizona. I would be pleased to hear from all the boys and girls, and will answer all.—Frances Thomas, East Wilmington, Cal.

People sometimes have large farms in the great northwest:

DEAR CADETS—I am a North Dakota girl, 19 years of age, and live on a farm of 1,440 acres, only eight miles from town. I graduated from the country school three years ago, and I am staying with my oldest sister, who has been married six years. I enjoy reading the Cadet letters, and I wish all the Cadets would write me either letters or cards, and also send photos, as I am very lonesome sometimes. I will answer all.—Emilie Froelich, Valley City, N. D.

This home girl is very welcome:

DEAR CADETS—As an event of the beginning of the year I wish to become a Cadet of Equity. My father has been taking UP-TO-DATE for several years, and I enjoy reading the letters very much. I am 20 years old and have lived on a farm all my life. I like city life, but I think country life more independent. Our best crops are corn, wheat and oats. I would like to receive cards and letters from all Cadet girls and boys and will answer all I receive.—Alice Boll, Columbus, Ind.

UP-TO-DATE helps in the study of agriculture:

DEAR CADETS—I am 19 years old and live on a farm of 208 acres at the foothills of the Ozarks. The surrounding country is not smooth, but it is an excellent farming region. Farmers raise from 35 to 100 bushels of corn per acre. I am a senior in the high school of a nearby village, and the most interesting subject I study is agriculture. I find UP-TO-DATE is a great help to me in that. I take it to school and my teacher thinks it a model farm journal. He often reads articles in it to the class. I am passionately fond of music and flowers and I think I could not live contented anywhere except on the dear old farm. Cadets, please write me. I think to exchange letters is helpful as well as entertaining. I will answer all I receive.—Belle Wynkoop, Eudora, Mo.

DEAR CADETS—I'm a girl almost sixteen, I trust as good as is often seen. I live in the good old Evergreen state. And to our home comes UP-TO-DATE. The best farm paper in all the land. The letters are good on the Cadet page. Mostly from girls and boys of my age; And I thought, dear Cadets, I'd write one too. So I'd get to hear from some of you. So write me, Cadets, every one, And I'll guarantee there'll surely come An answer to every Cadet mate That writes me in the Evergreen state.—Florence E. McClelland, Chinamatum, Wash.

Next we are favored with a descriptive letter from South Carolina:

DEAR CADETS—I wish to tell you something of this grand old Dixie Land. I live in South Carolina, about five miles from Yorkville, which has a population of about 2,200 people. It is said to be the most beautiful town in the state, and one may well believe it when in the spring the many trees of cypress, oak and elm begin to bud, and later when their foliage is in full growth. Yorkville has an excellent location, with good drainage, and is very healthful. There are five churches, an orphanage and a graded school building. I am attending the high school and will graduate this year. I am 18 years old and live on a farm of 360 acres, the products of which are corn, wheat, oats, potatoes, peanuts, all varieties of vegetables, and chiefly cotton. Papa takes UP-TO-DATE and thinks there is no other paper like it, and I am sure by the way my brothers look for its coming twice a month they think it is a gem. In my estimation no other paper excels UP-TO-DATE. I will be pleased to correspond with any of the Cadets that care to write to me. Though busy with my studies, I am sure I can find time to answer every card or letter I receive. I would be specially pleased to hear from those whose birthday is January 27.—Reola Youngblood, Yorkville, S. C.

Poetry and sunshine is a boast of the south, and we cheerfully admit the following, though poetry takes more space than prose and space is an object in this department:

DEAR CADETS—Here comes a lass of fifteen years To join your band of friends so gay; To gain admission I have some fears, But just this time please let me stay.

"She's from the country," did you say? And I admit you are right in that; No city for me, with its stir and display Or thing made by man for show, and all that.

Give me the country, with its birds and its bees; Where God is the artist the pictures are true;

And then the perfume from the bloom-laden trees— The country is best for me and for you.

I like to read books from the pens of great men

And my highest ambition is to do things as well—

To know and to think and to write like them, But of my success no one yet can tell.

But I must now bring these lines to a close; I did not intend to make a long call, But in good company swift the time goes And I'd like to stay and not go at all.

—Eunice Walford, Gloster, Miss.

DEAR CADETS—I am a California girl, aged 13 years, and am the oldest in a family of four. I live on a farm of 102 acres. My uncle has eight horses, nineteen head of cattle and eleven hogs. We milk nine cows. My father died October 8, 1913. We live about eight miles from Modesto, on the Stanislaus river. Our farm is mostly bottom land. We raise corn, potatoes, alfalfa and vegetables in the bottoms and grain on the uplands. We have been taking UP-TO-DATE for about two years and like it fine. I would be glad to exchange letters or cards with the Cadet boys and girls and will answer all I receive.—Edna Deal, Modesto, Cal.

DEAR CADETS—I am 20 years old and live on a farm of 120 acres, two and one-half miles from town. We have many things made of concrete, among them a concrete corn crib. I love music, sports and auto driving. I have learned that a light-weight car will go as far and as fast as a person need go, and with less expense than a large car. The cost of high living is our greatest problem. Illinois is king of the corn-growing states. Much land sells at \$300 per acre, though one piece sold recently for \$100 per acre. I like UP-TO-DATE fine and think it helps to solve scientific farm problems. I would like to exchange cards, letters or photos with the Cadets.—Lee C. Griesemer, Hopedale, Ill.

DEAR CADETS—I am a Nebraska girl, 17 years of age. I have taken UP-TO-DATE FARMING for four years and think it is the best farm paper I ever read. I would like to hear from all the Cadet boys and girls and will answer all I receive.—Kate Angle, Cowles, Neb.

DEAR CADETS—I will be 17 years old July 22, and live on a small ranch. My uncle owns a ranch and lives beside us. I have finished school and am keeping house for my father, as my mother is sick. We live fifteen miles from Seattle, on the water front. There are ten children in our family, five brothers and four sisters. I am the oldest girl, but there are two older brothers.

I would like to exchange cards and letters with the Cadet boys and girls and will answer all I receive.—Marie Johnson, Richmond Beach, Wash.

DEAR CADETS—I live in the country with my folks, where we have been only three months. I like the country, but not so well as town life. We have been getting UP-TO-DATE ever since we came here, and we all think it a splendid paper, and oh, how I enjoy the boys' and girls' letters! You wished us to tell something we had just learned. I have learned so much since we came here that I can not tell you all, but I have learned cooking, housekeeping and many other things. I advise all girls to learn these along with their school studies. I am 15 years old and love books, music and outdoor sports. I have been taking music for about five years and can play pretty well. I would be glad to exchange cards and letters with the Cadet boys and girls. I have a camera and will send some photos.—Ruth Gordon, Thornville, O.

Here comes a young scientific farmer who won first prize in an agricultural contest:

DEAR CADETS—Last year I entered the agricultural contest conducted by the agriculture teachers of four rural agricultural high schools and won the first prize, which was a Royal pea huller. The peas were planted on land which had been in oats. I cut the stubble thoroughly with a disc harrow and made a splendid seed bed. The peas were planted with a drill on June 17 in rows thirty inches apart and four inches deep. I did not use any fertilizer. On the 30th day of June I plowed them, and again on the 4th of July, followed by hoeing on the 6th, and plowed again on the 16th. On the 24th I gave the final plowing and laid them by. I picked the crop by hand and hulled them with a pea huller. On a plot of one-eighth acre I made 210 pounds of seed, which is at the rate of twenty-eight bushels per acre. My costs of production were: Planting, 20 cents; plowing, \$1; hoeing, 75 cents; picking, 75c; threshing, 50 cents; total, \$3.20.—Boyd Chapman, East Chattanooga, Tenn.

SUN HOLLOW WIRE SYSTEM

Superior to all other pressure systems. Soft, clear powerful light, costs little to operate; attractive fixtures, pressure tank anywhere inside or outside house. Gravity Lamps also. Get catalog, agents' terms, and full details of our Special Premium Offer.

BEAUTIFUL EASTMAN KODAK
(No. 3 Premo Junior, photos 3 1/4 x 4 1/4) Free to purchaser of 6 Sun Lamps in one year.

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.

C. Hayes Taylor, Indianapolis, Ind., treasurer.

A. Y. Satterfield, Sterling, Idaho, national organizer.

S. W. Morris, Rochester, Minn.
C. B. Lozier, Robertsdale, Ala.
J. Harris Lenker, Sunbury, Pa.
David Holmgren, Tremonton, Utah.
Wm. Grisenthwaite, Oregon City, Ore.
A. O. Weber, Geneva, Neb.
O. E. Scott, Pocatello, Idaho.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Pocatello.

Oklahoma

President, T. C. Monson, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, William Grisenthwaite, Oregon City.
Secretary, F. G. Buchanan, Oregon City.

Gulf Coast District

Florida, Georgia, Alabama, Mississippi and Louisiana—
C. B. Lozier, District Manager, Roberts-dale, Ala.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the F. S. E.

Wanted—A leader in each community.

Each community has a leader, perhaps several of them, or perhaps several who have not led in community affairs, but one of whom can easily become the leader in the future.

We must find a leader in each community, or develop one. The call now is for a man, or a woman, since women are stepping up alongside of the men in many activities, to take the lead in promoting the great things for community uplift and betterment.

There are easily several such men and women in each community where this paper goes who will read this call. Will one or more of them respond? Will some one in each community, where the leader has not yet been found, send the blank that is appended to this article and help to bring the people of his community to a full realization of their hopes to make the place they have selected as home the best place in all the country to live in and do business?

There are tens of thousands of rural communities where nature has provided everything for man's physical and material comfort and welfare, but the opportunities are not embraced. The soil is fertile, the climate is fine, the water is pure, the neighbors are congenial and the markets are near or the transportation facilities to distant markets are sufficient, but the community is not as prosperous as it might be—the community is not thriving.

The country is awakening to these facts as never before. Farmers are now seeking for a cure for the evils of country life as they never did before. There are more influences at work now to urge farmers to do something to better their condition than ever before, and farmers' associations, corporations, unions or clubs are being formed faster now than ever before. We read in a paper that in one north-western state over three hundred farmers' clubs have been organized in the past year. These farmers' clubs meet at schoolhouses or at the homes of the members. The paper which claims the chief credit for the existence of the clubs says:

The ——— believes in any practical movement working for agricultural betterment. * * * The farmers' club, which is made up of farmers, is controlled by farmers and returns to its farmer members all of its benefits without a cent of tribute to any one, is the best "self-help" weapon of which we know, and when the farmer gets into the habit of helping himself he can cure a large majority of our agricultural ills. * * * We believe in rural organization—local organization for specific work and social advancement. We believe in the control and conduct by the farmers themselves of such organizations. We believe in organizing for business purposes. The wide-awake farmers' club will fulfill all of these things.

The intimation is thrown out in the above that anything beyond the local farmers' club takes the organization

out of the hands of the farmers; that the farmer has not the business ability to manage an organization that is broader than the extent of his and his neighbors' farms; also, if anything is asked to build and maintain a farmers' organization, that has a more ambitious program than the local club, it is "tribute" to some one. But have not farmers a right to select their agents and representatives from their own ranks or from other classes and pay them for services rendered in organizing them or in helping them to do business?

What would laborers have gained if they had organized their locals and not have joined all the locals of a trade in central units and all of the central units in a national body? And then they went farther and the different trades organized the American Federation of Labor.

To illustrate: The United Mine Workers of America met in Indianapolis in January. One of the duties of the convention was to decide the price of labor in the mines for the next year. Now, understand, there were representatives of every important mining district in the country at the convention and the matter of wages was decided for practically every mining district in the country and for every organized miner.

Contrast this, if you please, with the teaching being passed out to farmers that anything beyond local organization takes the organization out of the hands of farmers, and as soon as their program is extended beyond the community they will pay "tribute" to some one. Why, it was stated in the Indianapolis papers that to take a roll call vote in the miners' convention cost \$10,000. This was because the delegates were paid for their time attending the convention and the time consumed, considering that there were more than 1,000 delegates, would represent \$10,000.

Yet these people are miners and you are farmers. They have only their labor to sell and you have the absolute necessities of life to sell. They have organized and co-ordinated and federated and have contributed to their organization until it is in a position to guarantee them their price for all they sell, while you still meekly ask

the other fellows, "What will you give?" They have contributed their small mites, as dues, to their organization until they have hundreds of thousands of dollars in the treasury for offensive and defensive work, while some farmers' leaders tell you to not contribute a cent toward a business organization for protection. They pay their delegates' expenses and a per diem when attending the convention, but when a farmer is sent to a farmers' convention he is asked to pay his own expenses or, perhaps, an oyster supper is pulled off to provide the means.

Such advice to farmers is "rot." It is not only dangerous, but it is damaging. Farmers, under the old conditions, have paid, and are paying, more tribute to others than any other class of people ever did since the world began. It is clear that this can not be changed except by a revolution at the business end of farming. Yet some people say: "When the farmer gets into the habit of helping himself, he can cure a large majority of our agricultural ills," and "The wide-awake farmers' club will fulfill all of these things."

The individual farmer is powerless to change anything and the local farmers' club has but little more power. The individual farmer becomes powerful only as he is backed up by his brother farmers, and the power of the local club or association, or whatever you call it, increases in ratio with the number of other clubs that work in unison with it.

A few years ago farmers' clubs spread all over Michigan. Where are they now? What did they accomplish toward a solution of the great rural problems? They have disbanded, or have merged with organizations with more comprehensive plans for accomplishing the great objects.

We do not say that good may not come out of such schoolhouse and farmers' home organizations. They form the very best nuclei for local clearing houses or for federation, if the membership is large enough and their objects important enough. Every community where the farmers' clubs exist is in need of A LEADER to study the plan of national organization, co-operation and federation as being established by one organization—the

\$100
Puts It On Your Farm

For \$100, I Clean and Grade Your Seed Grain

THE CHATHAM Grain Grader and Cleaner

Handles 70 Kinds of Seed Grain and Grass Seed
Fame Oats, Cockle, Rye and Smut.
Cleans the dirtiest Flax. Has special knocker and skimmer which prevents clogging. (Other machines choke up.)
Takes Dodder, Barn Yard Grass and Foxtail out of Alfalfa and Millet "slick as a whistle."
Takes Buckhorn from Clover.
Sorts Corn for Drop Planter.
Famous BEAN MILL. Handles all varieties, takes out the SPLITS, Clay, Straw, etc.
Handles Peas as well as any Grain or Grass Seed. Removes foul weed seed and all shrunken, cracked and sickly grains. Takes out all dirt, dust and chaff. It is also a bulky chaffer. Handles 60 bushels per hour. Gas power or hand power. Easiest running mill.

You can't afford to plant common Seed and take chances on a poor crop, when I am offering to scientifically clean and grade every bushel of your Seed Grain for this spring's planting for one paltry dollar.

Here's my proposition, and if you are a smart man you will write me before sunrise tomorrow:

Send me one dollar and I will ship you, **FREIGHT PAID BY MYSELF**, this improved 1914 Chatham Grain Grader and Cleaner, with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the \$1. until next October. And by October YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST IN INCREASED CROPS. Then you'll have it to work FREE for you the rest of your life.

Your Dollar Returned

I only want the dollar as evidence of good faith—to protect myself from mischievous boys. If after 30 days' hard test, you don't want my "Chatham," send it back at my expense and I will return the dollar.

A "Made-to-Order" Machine

Every "Chatham" is practically a made-to-order machine, for I send you the exact and proper Screens, Riddles, Hurdles and Sieves to grade and clean every Grain and Grass Seed grown in your locality. That's the secret of my success. I would not be the leading maker of Graders and Cleaners if I had tried to make my equipment fit ten million farms. What would you think of a clothing maker whose suits were all one size? Wouldn't it be a miracle if he gave you a fit. Yet

all makers of Graders and Cleaners, except me, send the same equipment, whether you live in Maine, Ohio or Oregon. They wouldn't do that, if they had my 11 years' experience.

Extra Screens Free

I use, all together, 81 Screens and Sieves. It usually requires 15 to 17 for the average farm. These I select from the 81. After 4 years in the business, I am pretty sure to pick the exact equipment needed on your farm. If I shouldn't, just drop me a line and I'll send you additional requirements. There will be no charge for this.

Samples Graded Free

Maybe you have some Seed Grain that you can't clean or grade or separate. Send me a sample. I will purify it and tell you how you can do it cheaply. No charge for this.

Seed Corn Sorted

My big Corn Sorting Attachment, invented 2 years ago, is a great success. Twelve thousand farmers and many leading Agricultural Colleges are using it. It is the only machine I know of which scientifically sorts seed corn for drop planters.

New Book Ready

Send me no money now—just a Postal, for the finest, most complete Book on Seed Selection I've ever written. After the Book comes, write me what size machine you want and I'll ship it, freight prepaid, on receipt of \$1.00. Then clean and grade all your Seed Grain. If you write today, you get my Book by return mail. Address nearest office.

The Progress Tailoring Co., Dept. 5082 Chicago

Farmers Society of Equity. And to do that we want you to send the blank appended.

One of the professors of an agricultural college said in an address recently: "The labor question is the greatest problem confronting the farmer today." Then the same speaker, referring to a solution, said: "The problem must be solved by teaching sons of farmers that their vocation in life is to be found on the farm. This teaching must come through the schools and colleges and county agricultural agents."

One naturally wonders how these institutions are going to solve the problem in the future since they have not made any impression on it in more than fifty years since the agricultural colleges began to be established, but the trouble is constantly growing worse. Many of the southern states have had the county agricultural expert or agent for years and the agricultural colleges before him, yet the farm labor problem is more acute than ever.

Such talk is pure buncombe. You can give every country boy a college education and initiate him into all the mysteries of raising big crops and fine stock, but without the certainty of financial reward that labor and intelligence and superior judgment is entitled to, and receives in other callings, the education WILL NOT keep the boy on the farm. For a fact, the broader the education, and the more intelligent and discerning the young man is, the more likely he is to seek a different vocation.

The bare fact that under our protective tariff for agriculture, that we had until a few months ago, rural population decreased tremendously and abandoned farms increased at an alarming rate, while enormous educational and demonstrative efforts were constantly put forth to help farmers, must show conclusively that there are other vocations more profitable, or at least more attractive, than agriculture.

And now, with free trade and inevitable lower prices for the products of the farm, already being realized, the only kind of education that can hope to turn the tide from town and city to country, or that can hope to keep the boys on the farm, must be deceptive—calculated to make them believe what is not really true.

We have often said that the problem of a sound organization of farmers is the greatest one before the country. Until farmers are in a position to protect themselves in their dealings with others, superior education in producing can avail them very little. First must come organization and co-operative business to insure enough money, enough reward. Reward stimulates every producing capacity in a man, and then we have intensive farming, increased production and increased reward again, leading to still further increased production.

It is stupid, if not worse, for the friends of farmers and farmers' institutions to give farmers' boys higher education to produce better, and then leave them to work under a system that allows them no voice in the matter of naming the prices they shall sell for. Try to imagine a manufacturing or mercantile concern doing business on this basis. Farmers and farmers' boys would now better study the business systems of some of the big manufacturing or distributing concerns than to attend agricultural colleges and read the Department of Agriculture bulletins.

In Connecticut there is produced for each individual 3 bushels of grain, 4 gallons of milk, 3 pounds of butter and a fraction of a pound of cheese. In Denmark there is produced for each individual of its population 38 bushels of grain, 336 gallons of milk, 81

pounds of butter and 13 pounds of cheese.

Go back a number of years and we find that the revolution in Denmark agriculture began with farmers organizing and co-operating. She is full of co-operative dairies, slaughter houses and marketing associations. WITH THESE CAME INTENSIVE FARMING, but intensive farming was not forced ahead of them. It could not be done in Denmark and it can not be done here.

We may have quoted the following from the chief of the Bureau of Statistics of the Department of Agriculture, before, but it is worth repeating:

However desirable increased production on farms may appear to be from the consumer's standpoint, it does not follow that such increased production would result in any increase in the cash income per farm or per capita of farm population or that prices paid by consumers would be any lower.

And this also from the Department of Agriculture:

The long line of distributors and middlemen between the farmer and consumer are in a position to take advantage of the market and to a certain extent control the market in both directions, because they are better organized to keep informed of crop and market conditions and to act more promptly than either farmers or consumers who are not organized and as individuals are helpless.

Buy With Your Neighbors—Save Fence Cost

Write us for special low prices on co-operative buying of Empire Fences. Get your neighbors to join you in ordering. We will quote you lowest wholesale factory prices. Joseph Stangle, Constantine, Mich., writes: "Empire fence can't be beat. My fence, put up seven years ago, as good as the day I got it. Expect neighbors to go in with me to make up big orders." Ask for FREE BOOK of facts about fence quality: illustrates and describes

No. 9 Empire and Empire, Jr.
 Open Hearth Steel, Big Wires, Heavily Galvanized

This book will show you why the No. 9 Empire and the Empire, Jr., made of Open Hearth Steel, great big wires, galvanized as a wire fence should be galvanized, will outlast any soft Bessemer steel fence ever made. It illustrates our big wires—the strong Empire knot that holds good as long as the fence. It will show you why Empire fences are proof against any and all kinds of weather, rust, rot—proof against the hardest use—why they do not sag, why they stay hog-tight and cat-tight as long as they are in use—why they are by far the least expensive fences to buy in the long run.

Farmers everywhere are investigating fence quality. Users insist on knowing the quality underneath, just as they know how to judge a horse. You cannot fool an experienced buyer with an old horse doped up—polished up—to look like a good horse. You cannot fool an experienced buyer with a poor fence doped up to look like a good fence.

Bond Steel Post Co., 61 Maumee St., Adrian, Mich.

Get My Low Price On The Hercules Stump Puller

SEND me your name if you have stumpy land, or even a few stumps in your fields. I want to make you a price that will save you at least 50% on the regular price of the famous Hercules! This is the best chance that you have ever had, to get rid of the stumps in the quickest, cheapest and best way.

Pull Out The Stumps!

Stump land is *loser* land, *robber* land, *failure* land. You can't afford to keep stumps. They cost too much money. They take away half the real value of your land—and they rob you of big crops that you don't get! Let me quote you my price on the world's best machine for clearing land.

All Steel Triple Power 3-Year Guarantee

You Take No Risk
 I'll send the Hercules on 30 days free trial—you try it in your own way, on the stumps in your fields. If you keep it, you are still further protected by any unqualified 3-year guarantee which insures the free replacement of all broken castings for 3 full years, whether the broken castings are your fault or the fault of the machine!

Write Quick For Big Free Book
 You will be glad you wrote. You'll be pleased with the photographs, letters and facts about the Hercules construction. My price will make it easy for you to own a Hercules. Nothing to be gained by waiting—much to be lost. Write me now while my special price offer holds good. Address me personally,
B. A. FULLER, President.

undoubtedly a marketing problem which will have to be solved by better organization of farmers and improved methods of marketing.

—o—

So the call is made again for a leader to organize a local clearing house for each community at the market city or town, or to federate the local association, union or club, if one already.

—o—

In closing this article we can not do better than quote from an address made by A. Y. Satterfield, national organizer of the Farmers Society of Equity, at the last convention:

Don't let us get it into our heads that there is any particular business in any part of agricultural America that will not be benefited by co-operation with other people engaged in agricultural pursuits. Ours is a work that will bring about a real revolution in agriculture, with marked benefits to all those who are engaged in it and depend upon it. It is a big proposition—the greatest that ever struck the American continent—but just as soon as time and hard work will permit, it will be accomplished. I want to tell you right here that it is going to come. The freedom of the agriculturist from the bondage of price uncertainties is coming just as sure as the freedom of the negro followed the Dred Scott decision. We must hold together. There shall be no withdrawing, no faltering, no looking back. Above all, let each one of us carry back with him a full sense of the absolute necessity of loyalty—loyalty to the local, to the district and to the national head. Under one head we can stand together and win, but once sever connections with the head and you cast yourselves adrift, to be driven on the rocks and destroyed, soon or late. Be loyal, and be active.

—o—

Send the blank and get full instructions and learn how easy it will be. Also learn how you will be paid for your services and benefited through a clearing house or federation.

THE BLANK

Farmers Society of Equity, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

This list was sent by

(For more names attach paper. You should send not less than twelve names. We will write a letter to all names and send literature.)

WHAT IS SENT TO MEMBERS

Upon receipt of the report of a local clearing house organized, headquarters sends a working outfit to the secretary. Included with this is a member's card, an emblem button, a copy of the constitution and by-laws and one circular, "A National Marketing System," for each member. The same are sent to the secretary for each subsequent member added to the local. The secretary is required to deliver these to the members as they attend the meetings. Secretaries should not fail to deliver them promptly and members should see to it that they get them.

The constitution and by-laws will show how the society is organized and governed, and explains the duties of members and officers. The circular explains more fully what the objects of the society are and how they will be accomplished through a local clearing house or federated association at each market city, town or shipping station. We want each member to be a

good member. He can not be unless he understands his organization and what he connected with it for and how he is to derive benefits from it. For these purposes we send the things mentioned. Study them.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

The following people report crops to sell:

John Strandberg, Walnut Grove, Minn., has 1,200 bushels of No. 3 yellow shelled corn. He wants offers on his track at Revere, Minn.

P. E. Johnson, Box 24, Moravia, Idaho, has five and six-inch cedar posts to sell at reasonable prices. Also a car load of potatoes.

QUESTION—Our local dealer has been telling some of our members that he can pay \$10 more on a car load of potatoes than we can get through the Equity System. This is making some of our members think that we are not getting our rights, so please let me know how I should handle the matter.—J. L. Borch, Mayville, Mich.

ANSWER—The only way that your local dealer can pay you \$10 more or any other sum more than you can get for shipping potatoes through the Equity System is to pay you more than the current market price. He may do this for a car or a few cars in order to break up the organization, but you will find if the farmers give up the organization that he will take a good many times \$10 off of you in the future. Inasmuch as your organization is to get the highest prices possible, there can be no objection to your selling your potatoes to the local buyer when he will pay you more than can be realized by direct marketing through the Equity System. But you should be very careful to not let this operate to disrupt the local clearing house. Maintain your organization and it will constantly become more valuable to you, as you learn business and as your membership increases and the volume of business you do increases. Also do not be discouraged if occasionally you realize a little less for a shipment than you might have obtained for it at home when you loaded. Sometimes the market goes off between the time of loading and the time of sale. But you must remember that when you sell to the local buyer that he is subject to the same uncertainties. Sometimes he loses, just as you may lose, but in the long run it is clear enough that he makes his profit and sometimes a very large one. We believe that the Equity System will get for our members better prices than the individual local buyers and shippers can realize, because of the superior advantages our representatives have on the market because of the large volume of business they do, and usually the society secures their services at less than the regular rate.

You have organized to do your business. To do your business of marketing you must be business men. Business men take the bad with the good, remembering all the time that, in the long run, doing your own marketing must prove profitable.

Q.—I have thirty acres of ground that I sowed to clover last spring, but the drought killed it with the exception of spots where the clover is good. I have been thinking of sowing the barren places to oats, and buying ten or fifteen young heifers, to be fresh, and also some sheep to help keep down the undergrowth in my woods and pasture this year. These heifers to be turned back to the stock yards in the fall. Do you think the high price of stock cattle and the uncertainty of the markets will justify me to do this? Or would I better cut my clover? In other words, do you think the tariff being taken off will have a sufficient effect on the future price of cattle and of sheep as to make my venture unprofitable?—R. E. Watson, Whiteland, Ind.

A.—We believe that you will not run very much risk if you carry out the program proposed. You will not feed any grain, or not much grain, to the young cattle, and the increase will probably bring you around the same price that the cattle are worth now. Also you will have the calves to go on the market, which will bring you considerable money. If there is any decline in the price of cattle between now and next fall we believe it will not be very much.

50 ORGANIZERS FOR SOUTH WANTED

Campaign for organizing the farmers in the Gulf Coast district now open. Better marketing is at hand, and local clearing houses of the F. S. E. can be quickly established at every shipping point in gulf states. For terms, territory and full particulars write C. B. Lozier, national director, Roberts-dale, Ala.

Farmers Interest White Dent Seed Corn

If a corn grower you better send for full particulars and price of seed and letters from growers, probably in your own county, before you lay this paper aside.

You can start where corn breeders have brought this corn after eighteen years of systematic breeding. This is the best-bred corn in the country. No doubt about it. For you to breed up your corn to equal this would require many years of painstaking care and cost of more than a thousand dollars to get a bushel. For a nominal price you can buy

seed of this corn to plant your 1914 crop and you can depend on a big in-

Twenty Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1908.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Chicago, 1907.

creased yield over any other seed you can plant.

Farmers Interest Corn is the best quality and greatest yielding corn in America. Thousands of customers have enthusiastically testified to this. We print many such letters. Some of them live in your own county. Our seed was never better than this year. Guaranteed. This corn

Ten Most Perfect Ears. First Prize in Class Open to World. Missouri State Fair, 1911.

Ten Most Perfect Ears. First Prize. Indiana State Fair, 1908.

might be called THE ALL PREMIUM corn, because it has almost invariably been awarded the highest prizes wherever exhibited. See some prize exhibits illustrated on this page.

Most Perfect Bushel. First Prize. Open to World. Illinois State Fair, 1911.

Most Perfect Bushel. Grand Sweepstakes. Open to World. National Corn Exposition, Omaha, 1909.

The general farmer can not afford to take the time and go to the trouble of breeding corn like our Farmers Interest has been bred. But he can profit by the years of work of the breeder by planting this great variety. This corn was bred like cattle and horse and hog breeders breed the fine stock that any farmer can get today.

Mr. Corn Grower: The cheapest way and the best way for you to quickly get that improvement in quality and yield of your corn that you are thinking about is to buy Farmers Interest Corn of us this year. An increase of ten to twenty-five bushels per acre in your crop in a normal season can be depended on if you plant this corn. Send for reports from others who are doing it right along with Farmers Interest. REMEMBER, THE EASIEST WAY TO IMPROVE YOUR CROP IS TO LET THE OTHER FELLOW DO THE BREEDING.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

Catalogue free. It will cost you only a post card. A great many farmers must buy seed corn this year, so why not start at the very tip-top of perfection by getting Farmers Interest Seed Corn?

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Columbus, O., 1911.

No other corn has such a record for premiums won. We show only a few of the prize lots. No other corn has such a record for drought resistance this last year and good yields. Send for catalogue and read. Every farmer who plants this corn will reap all the benefits of eighteen years of breeding by the most scientific corn breeders in the country.

Send today, before you lay this paper aside. THE OTHER FELLOW DID THE BREEDING. YOURS TO REAP THE FULL BENEFIT AT SLIGHT COST.

O. K. Seed Store, Desk 2, Indianapolis

Equity Field Work

Up-to-Date Farming and Equity in Oregon

We find UP-TO-DATE the most helpful of all farm papers and we appreciate the good work that is being done through its pages. May it continue to grow and may it and the Society of Equity do as much good in all the states of the Union as they have done in Oregon.—G. F. Mighills, Oregon City, Ore., R. F. D. No. 3.

Equity Equalizes Prices in Idaho

The Farmers Society of Equity has saved this country many thousands of dollars, both in buying and selling, for we can do better in the town of Burley on account of the Farmers Society of Equity than in towns on either side. I am satisfied it will grow stronger as farmers get more money to do business with. Our county union is incorporated, but not much stock sold, as farmers must get money out of their crops to live on and buy live stock. Wishing you success in your great work, I remain.—D. L. Whidden, Heyburn, Idaho.

Walton Has Nebraska Going

The following letter from B. F. Walton, recently appointed state organizer for Nebraska, should carry encouragement to all organizers and members:

Geneva, Neb., Jan. 26, 1914.

I wish to state that Geneva Local No. 7103 is making good. We started July 1, 1913, with fifteen members. We now have over eighty and we have done \$11,489 worth of business from July 1, 1913, to January 1, 1914. We have so far this year handled five cars of grain and one car of salt. We have no money invested and no salaried officers. Our business agent, Mr. A. E. Weber, gets a commission and all it costs the members is actual operating expenses. We have made a big saving to members.

The producers and consumers are beginning to see that farmers can do business in a straight business way for benefit.

I have organized ten other locals and all are making good. Tobias and Ohio are two new locals and are doing a big business. You will hear from Nebraska later.—B. F. Walton, State Organizer.

Equity Gets Better Prices for Cauliflower

I will give you the figures on the cauliflower I shipped to the Equity System in comparison with another shipment made to on the same date, of identically the same quality. The five hampers sold through Equity netted me \$3.45. The five sent to — (a commission firm) netted me but \$1.87. I am much pleased with the returns I have received from other shipments and well satisfied with the Equity System.—J. C. Allen, Denham Springs, La.

Ideas of a Progressive Secretary

Officers and Members, F. S. E.:

I have been studying the report of the last F. S. E. annual meeting and am much pleased with the action of the convention. Consider the amendments to the constitution and by-laws an improvement. We hope to see the "federation" proposition bring in great results. There are over 300 farmers' elevators in North Dakota, almost all working on the stock dividend paying basis. Many of them are now contemplating the adoption of the patronage dividend method, and so becoming truly co-operative. The Lone Tree Farmers Elevator Company, of which I have for six years been secretary, is now seriously considering broadening our articles of incorporation to take in more lines of industry and commerce, and if we do we hope to find the terms for federating with the F. S. E. satisfactory.

The "county agent" movement is active in this state, and in our county the people are busily engaged organizing neighborhood clubs. I have been secretary of one of these clubs since its organization. The "neighborhood club" is rather a tame affair. Holding farmers' institutes on "how to farm," fairs, corn shows, stock shows and social meetings is their chief object. A large and increasing number of farmers realize that the neighborhood club is too limited in its scope and are in many cases organizing independently, and there is considerable talk among them of federating all such clubs for business facilities in buying and selling. The county agent, being supported by taxation, can only act as adviser and educator, and any attempt to provide better business facilities for farmers must be by organization and co-operation of the farmers, by the farmers and for the farmers.

Please send me full information and instructions regarding the federating of neighborhood clubs, farmers' elevators, warehouses, mills, potato growers' and stock growers' associations. I am planning to get our elevator on the co-operative basis, federated with the F. S. E. It is the only plan for full success.—J. Kassens, North Dakota.

This PONY GIVEN

Who Wants Me? QUICK!

Boys! Girls! Do you want this beautiful Shetland Pony for your own? Write today—Quick! You can get him Free—but Hurry!

My name is "PADDY"

I am 42 inches high and three years old. I am a pet, too. My color is black, and I have the silkiest, fluffiest mane and tail in the world. I am considered a very handsome pony. I am well trained. You can either drive or ride me and I am just as gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy.

I WILL GO ANYWHERE to find a kind little boy or girl as my owner. I am ready and waiting. I'll make you happy because that is what I was made for and it's what I like to do. If you want me, and I know you do, just send your name and address to Uncle Billy and I'll do my best to come to you in a hurry. I am going to some boy or girl, so be quick. Send your name this very day.

I have already given away 32 real, live Shetland ponies. Do you want "Paddy"? Of course you do. Write me at once and I will send you 2,000 Pony Votes Free for your promptness. I will also show you how to get more pony votes. So easy to get a pony if you do as I say. I will also send pony pictures; tell you how to get "Paddy" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—at once—don't put it off. Just say that you want "Paddy."

A Postal Will Do Address **Uncle Billy, Pony Man, 142 W. Ohio St., Chicago, Ill.**

A Cart Load of Fun For 10 Cts

We urge you to order at once—to-day—while the supply lasts. Tell your friends about it. Hurry!

Our Big FREE Offer: Send 10c for a NEW six months' trial subscription to our big home monthly story paper, "THE FAMILY," and we will at once send you the complete GIANT FLOWER COLLECTION free and postpaid. Do it today! "THE FAMILY" is necessary in every home and family and we want you to try it. The Flower Collection is a wonder and will delight you. But send at once—TODAY—make sure of this tremendous bargain. Address:

Family Magazine Dept. 122 Springfield, Ohio

Official Notice

A recommendation was made in the committee on organization and federation at the last annual meeting that the national clearing house approve the action of the Oklahoma state union in adding \$1 to the membership fee for all new members in Oklahoma, to provide funds to push with greater rapidity the work of organizing. This was done. Oklahoma organizers and local clearing house secretaries please keep this in mind.

Another recommendation of the same committee was to the intent that the official paper should contain departments for the different sections, wherein the needs and work of each section could be given wide publicity. The matter for publication in such departments should be furnished by the leaders of the movement in each section.

Thus far only Oklahoma has done anything along this line and on this page will be found the Oklahoma department, with matter supplied by J. A. Harmon of Shawnee, secretary of the state union. Other districts should follow Oklahoma's example.

Oklahoma Department, F. S. E.
State Headquarters at Shawnee
J. A. Harmon, Secretary

Report of Oklahoma State Union Meeting

Held January 27, 1914 at Shawnee

The Oklahoma state union held its first semi-annual meeting for 1914 and it was a success. J. A. Harmon, who attended the annual meeting of the national clearing house in Indianapolis on December 16, 17 and 18, made his report, and the entire proceedings of the national body were endorsed by the state.

Now and henceforth the membership fee in Oklahoma is \$3.50. The extra dollar will be placed in a state fund to promote and operate county and district clearing houses for marketing the crops of Oklahoma members.

It has been provided that the state union may issue sub-local charters to five or more, who will organize sub-locals at schoolhouses or other points not at shipping stations, these sub-locals to become members of local clearing houses when organized at their nearest or most available shipping station.

A board of nine directors was elected to carry on the clearing house work under the new provisions. The state union president, vice-president and secretary are ex-officio members of that board. The following were elected to fill the other six places on the board: Paul Springer, Shawnee; J. A. Farnsworth, Jennings; W. A. Craig, Ripley; H. B. Epperson, Perkins; H. C. Berry, Shawnee, and John Pahlpa, Mexico.

Special effort will be made to establish warehouses throughout the cotton and broom corn districts of the state.

The officers of the state union for 1914 were elected as follows: President, T. C. Monson, Shawnee; vice-president, J. A. Raines, Ripley; secretary-treasurer, J. A. Harmon, Shawnee; state organizer, George Monson, Shawnee. The above, with Paul Springer of Shawnee, constitute the state executive board.

The next semi-annual meeting of the state union will be held in Shawnee Aug. 4, 1914.

Membership in Oklahoma F. S. E., \$3.50. Liberal terms to capable organizers. Write the secretary for a commission and contract for territory.

Several boys with ginger in their veins are about ready to preach Equity along Oklahoma's highways. Come out from the byways and listen. We're building the only really good farmers' business organization Oklahoma ever knew. What county will be first to open up a new clearing house?

There's only one way to get better prices for farm products and that is through co-operation and controlled marketing. The F. S. E. is the only institution working effectively to that end. Every Oklahoma farmer can and should belong, and help the boys win.

When every farmer markets his crops through Equity clearing houses there will be no difficulty in making farming profitable and boys and girls will not flock to the cities. The way to build up country life in Oklahoma is to build up Equity.

Several counties in this state are preparing to open up county clearing houses in the near future. You fellows who live in them put your shoulders to the wheel.

The \$3.50 membership fee also pays dues to the state union and the national clearing house for one year from date of payment. Every farmer, no matter what his station in life, can afford it. It has cost each farmer hundreds of dollars to be without it.

Men of Oklahoma, let us get right down to business and make the year 1914 one of great progress in Equity. We can organize and reform the whole business of agriculture in this state and make it prosperous beyond measure. You who can organize get in harness. You who grow crops to sell climb in the wagon. The one great thing is to get together. There we can move things greater than mountains.

J. A. HARMON.

Meeting Notice

The Egin local No. 6912, Fremont County, Idaho, meets regularly at 7 o'clock p. m. on the first Monday of each month.—R. H. Kennedy, Secretary.

Did Well in Shipping Stock

We are shipping the first car of vegetables shipped from this local, No. 7204. We shipped one car of stock last week and surely did fine. We expect to ship again in two weeks. This year there will be considerably more stuff from here to market through the F. S. E.—Yours for business, Fay G. Cotton, Richville, Minn., secretary and treasurer.

Saves \$600 in Seven Months

I was sorry not to be present at the national convention. I am sure it would have been a great help to me, and I should have liked to help form plans for greater organization of the society, which I believe will be one of the grandest organizations in the world in the near future.

Our union has been a benefit of over \$600 already. We recently shipped two cars of wheat and gained between 7 cents and 8 cents a bushel over market price. We have forty-six members and a list of new ones to send in soon. We have not been organized seven months. The worst drawback, I find, is time to get to the places where an organization is wanted. There are two towns wanting to me to organize a local for them now and I will try to get to them soon. Hoping for great things for the union, I remain.—H. L. Clegg, Chadron, Neb.

A Young Local Doing Well

We have been organized but three months. Have not had much to ship out, but a great deal to ship in, and there have been only twenty-five or thirty members to do this.

Following is an account of what we have saved the people, as compared to prices asked by local merchants. We saved the people on:

One car wheat shipped in.....	\$ 32.00
One car flax shipped out.....	62.00
One car oats shipped in.....	1.00
One car cotton seed meal shipped in.....	1.50
Two cars corn shipped in.....	92.50
One car oats shipped in.....	40.00
One car feed shipped in.....	12.60
Money shipped in.....	95.00

Total	\$425.60
Expenses	35.15

Saved over local prices.....\$400.45
—John A. Mossman, Secretary, Thayer, Kas.

BUSINESS EXCHANGE

CLASSIFIED DEPARTMENT

Real Money-Saving, Money-Making Opportunities—You Can Sell Anything or You Can Buy Almost Anything by Placing Your Offer Before Our Million Readers

CLASSIFIED ADVERTISING—50 Cents a Line, or for eight (8) words. No display, except the first words will be set in capitals, each initial, numeral, abbreviation and key counts as one word. All orders must be received ten days before the date of the paper in which it is to appear. Remittance or reference should accompany all orders. Circulation guaranteed, 200,000 copies or more. When writing to these advertisers say "I saw it in UP-TO-DATE FARMING."

AGENTS

AGENTS—Novelty knives and razors are lightning sellers; 100 per cent profit; exclusive territory; goods guaranteed. Novelty Cutlery Co., 197 Bar St., Canton, O.

FARM LANDS

IN THE SWIGART TRACT of western Michigan are some of the best general farming lands; good opportunities in stock, poultry, truck, dairying and diversified farming; center of fruit belt; large profits in fruit growing; Lake Michigan harbors; four railroads; 8 1/2 hours from Chicago; \$10 to \$35 per acre, and most of the land \$17 per acre; \$10 to \$50 down and \$5 to \$10 per month on 40 acres. Annual terms if preferred. If you should die the land will be deeded to your family free from further payments. Prices higher in spring. Ask about privilege of exchange, seed supplying arrangement, instructions to settlers by experts, power dams to be built. A thousand 40-acre pieces from which you can choose; 10 and 20-acre tracts near growing towns. Write for my 72-page booklet and plans now. George W. Swigart, owner, Z-1250 First National Bank Bldg., Chicago.

LANDOLOGY—A magazine giving the facts in regard to the land situation. "Three months' trial subscription free. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter, marking it personal, and say "Mail me LandoLOGY and all particulars free." Address Lloyd M. Skinner, general manager, Skidmore Land Co., 33 Skidmore Bldg., Marquette, Wis.

\$11,765 BUYS 181 acres, 30 miles from Buffalo, 2 from village; rolling, loam soil, no stones; 13 acres timber, abundance fruit; buildings worth \$5,000; including 27 choice Holsteins, 3 horses, 2 hogs, 70 hens, all fadder, sugaring tools, farming tools, latest milking machine. Easy terms. Free list. C. J. Ellis, Springfield, N. Y.

FOR SALE—30,000 pounds best leaf tobacco, 9 and 4 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky. R. R. No. 5.

1914

Some things you can do with the Harley-Davidson that cannot be done with other Motorcycles

YOU can start the motor on all chain driven models at will, without even dismounting or putting the machine up onto the stand. A simple downward push on either pedal operates the Step-Starter and the motor begins to throb. (The Step-Starter is a patented feature found only on the Harley-Davidson)

Double Clutch Control

You can operate the clutch either with clutch pedal or by a hand lever. No need to let go of the grips that control the throttle and the spark or to take either hand off the handle-bars. Just a pressure of the toe or the heel and you engage or disengage the clutch.

Ful-Floteing Seat

You can ride over really rough roads in perfect comfort because the Harley-Davidson Ful-Floteing Seat (a patented feature) absorbs all the jolts, jars and vibrations.

There are five models of the new Harley-Davidson ranging in price from \$200 to \$285. Catalog describing the models will be forwarded together with the name of the nearest dealer on request.

Harley-Davidson Motor Co., 908 A St., Milwaukee, Wis.
Producers of High-Grade Motorcycles for More Than Twelve Years

Double Brake Control

You can operate the brake by back pedaling on either pedal or by a lever convenient to the foot. This foot control of both clutch and brake gives you practically automobile control of the machine, a distinctly new and very desirable exclusive feature.

Folding Foot Boards

When on tours and long rides you have a variety of positions at your command. The foot boards are long and accommodate a rider of any height. The pedals can also be used as foot rests if desired.

IDEAS WANTED—Manufacturers are writing for patents procured through me; 3 books with list 200 inventions wanted sent free; advice free; I get patent or no fee. R. B. Owen, Owen Bldg., Washington, D. C.

PATENTS THAT PROTECT AND PAY. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

POULTRY

C. O. D. SHIPMENT—All breeds fine Chickens, Turkeys, Ducks, Geese, large, vigorous, great layers, fine and show birds cheap. Macomb Fanciers' Co., Macomb, Illinois.

MAKE YOUR HENS lay more eggs. Wonder egg producer is doing it for others—it will do it for you; 30 days free trial if you write today. N. L. Webb, Box 38, Dodd City, Tex.

CHEAP—Must sell several 600-egg incubators, used only one season, cheap. Macomb Fanciers Co., Macomb, Ill.

SEEDS, PLANTS, TREES

SEEDS WANTED—We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

No. 1 ALFALFA SEED, 10c lb. f. o. b. cars. Also good farm in northeast Nebraska and one in northwest Nebraska, cheap. Write M. H. Green, Lynch, Neb.

ALFALFA SEED direct for farmers. Price and samples. Write J. L. Maxson, Buffalo Gap, S. D.

MISCELLANEOUS

FREE FOR SIX MONTHS—My special offer to introduce my magazine "Investing for Profit." It is worth \$10 a copy to anyone who has been getting poorer while the rich, richer. It demonstrates the real earning power of money, and shows how anyone, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. R. L. Barber, 452, 20 W. Jackson Blvd., Chicago.

STOCKERS and feeders for sale: 2 loads 1,080, 3 loads 950, 3 loads 750, 2 loads 600. Herefords, Angus and Shorthorns; strictly choice quality. Write me what you want. A. C. Wisecarver, Fairfield, Iowa.

YOU CAN SELL your farm or business quickly for cash, wherever it is, by—our system. Particulars free. Black's Business Agency, Desk 13, Durand, Wis.

THE COMING SHEEP—Big, oily wool-mitten Delaine Merinos; satisfaction assured. H. M. Culbertson, Zanesville, O.

YOUNG MAN, don't be without our flashlight: shaped like pistol. Write Plainfield Utilities Co., Elters, Pa.

MULEFOOT HOGS and seed corn. Dunlap, Williamsport, O.

Robbins Says-

"Take This Big Package"

Don't Send Me One Cent!—I Want Every Stock Raiser in America to Feed SAL-TONE at My Risk

I am John Robbins, of Greensburg, Indiana. I have spent my life on my stock farm. I have raised prize hogs, cattle, sheep and horses—hundreds of them. I am naturally proud of the premiums my animals have won at state fairs and live stock shows, but besides the glory of the thing, I've made money, too. Let me tell you how I have made money.

The Stock Conditioner and Tonic

The Great Wormicide for Stock

John E. Robbins

Pres. The John E. Robbins Co.
Mfrs. of Sal-Tone

Sole proprietor "Sal-Tone Stock Farm."

Owner and breeder of famous champion Hampshire hogs and Jersey cattle. His hogs, horses, cattle and sheep are known to stockmen everywhere.

Try It 60 Days at My Risk

Send the Coupon—NO MONEY

I want to send you on trial enough Sal-Tone to feed your stock for 60 days to test it out. Give it as directed and at the end of that time if it does not do as I claim I will not ask you to pay for it—not a cent. If it does, it will make you ten, perhaps a hundred times its cost. You will be the judge, and there will be no kick from me if it fails.

Sign and Mail the Coupon TO-DAY

How I Made Money

Several years ago I realized this fact—that if I would make money out of stock raising I would have to run it on a business basis. I realized that I would have to raise good stock—keep it in the best of condition so that I could get it ready for market in the shortest time and with the least amount of feed. I have solved this problem.

They Ask Me How

I am personally acquainted with farmers all over the United States. Thousands know that I have become wealthy raising stock. Possibly I make more clear profit in cash per head than any other stock raiser in the country. This is a big claim, but nevertheless it is the truth. Stock raisers ask me how I do it, and my answer is—

I Do It With SAL-TONE

Sal-Tone is my own preparation. For a number of years I tested it privately on my own stock. The results were so remarkable that I decided to put it on the market. Since then it has been used successfully by thousands of farmers in all parts of the country. Sal-Tone is not a stock food. Sal-Tone is really a stock tonic, worm destroyer and conditioner. As a tonic it gives the animal rich, red blood, keeps the digestive organs in perfect condition so that every particle of nourishment in the feed goes into the making of flesh and bone. As a worm destroyer Sal-Tone is a necessity to every stock raiser. Every well-informed stock raiser knows that 90 per cent. of all stock ailments are directly due to the presence of worms in the stomach and intestines.

\$25,000,000 Loss From Worms!

According to the United States government report, the stock losses directly and indirectly caused by worms are approximately \$25,000,000. This is interesting, but as far as you are concerned you are only interested in your own losses—and there is no doubt but what you have losses.

Thousands of farmers are feeding wormy animals and never suspect that their animals have worms. Their big losses are—

Losses in Feeding

It takes fully a third more to feed a wormy animal than to feed an animal that is free from this pest—and feed costs money—it represents dollars and cents that you are putting into your stock and that you expect to take out in cash. If you put more money into an animal than you get out of that animal you are not making a profit. Here is a loss that possibly you are unaware of—money that you could save if you would use Sal-Tone to drive out the worms that keep your animals in poor condition, possibly stunted and sickly—that makes them easy victims to disease—and especially to that dread destroyer—hog cholera.

I Have No Losses

This is a fact. My losses for the past five or six years have been practically nothing. Sal-Tone keeps my stock in the pink of condition—fat, sleek animals that pull down premiums and prize after prize in competition at the fairs all over the country. When I put a dollar's worth of feed into an animal I take out in return from \$1.50 to \$2.00—a profit in cash of from \$.50 to \$1. This is what I mean by success—this is what thousands of farmers—who use Sal-Tone are doing—that is what you can do just as well as they.

Stop Your Losses

Why don't you act now—why don't you determine to stop your losses, cut down your feeding expenses and increase your profits? There is no magic to it, there is no secret—simply keep your stock in condition by using Sal-Tone. Here is a straightforward business proposition, and I stand back of it. You take no risk whatsoever. If Sal-Tone doesn't do for you just as I say, it won't cost you one cent. What more can I say—what more can I offer—will you do your part by giving it a trial?

Judge for Yourself

My pigs are as fine as silk. I lost two and two could hardly walk before I received Sal-Tone. They have increased \$50 in value on \$12.00 worth of middlings in 70 days. Judge for yourself what I think of Sal-Tone.

C. A. HUNT,
Thompsonville, Mich.

Would Have Saved \$1,000

Judging from what Sal-Tone has done for me, I believe it would have saved me \$1,000 worth of hogs, if I had had 100 lbs. the first of January.

W. H. REMY,
Concordia, Kans.

PRICES: 40 lbs., \$2.25; 100 lbs., \$5.00; 200 lbs., \$9.00; 300 lbs., \$13.00. No mail orders filled for less than 40 lbs.; Sal-Tone always sold in "trade-marked" packages—never in bulk.

THIS IS LONGFELLOW—Grand Champion Hampshire at International Live Stock Exhibition at Chicago, 1912. Weight 1,000 Pounds. Owned by John Robbins on Sal-Tone Stock Farm. Sal-Tone made him the Grand Champion

Ship me enough Sal-Tone to feed my stock 60 days. I only agree to give it a fair trial, and will pay the freight to my station. I will report results in 60 days, and if it does as you say I will pay for it then— if not, I will owe you nothing—you take all risks.

What We Want You to Know and Why*Being a Few Words on Particular Matters From the Editors to the Readers***Better Country Roads**

BUILDING GOOD ROADS in the country is now, and will possibly always be, a community affair. The farmers living in a neighborhood must look after the neighborhood roads, to a certain extent at least. For years and years to come the most of the travel on country roads will be over dirt roads. The one big problem connected with making better roads is, so far as our farmers are concerned, the problem of building a dirt road that can be kept in good condition, and then keeping it so. Nothing has yet been suggested of greater value than to make the grading right in the beginning, and then using the split log road drag according to the light of experience. True, there are roads leading out from the towns over which traffic is heavy. These can and should be macadamized, gravelled or concreted, as thought best by road engineers who know their business. There are highways, or thoroughfares, which lead from one city to another where travel is great. These, too, should be put and kept in prime condition. These stretches of heavily traveled roads, used by all the farmers, and by a large share of the inhabitants of city or town, are the ones which rightfully should be constructed and maintained by county, state and national aid. Country roads are not for the exclusive use of country people—they are for the whole people. The whole people pay for their maintenance. It seems reasonable that the whole people should first improve those roads which they use most. There are roads which serve but one purpose—an outlet for those who live along its route. Upon them should rest the chief burden of keeping it in order.

The good roads movement is with us for all time. We can make its burdens less by taking a citizen's interest in the proper expenditure of road funds, with Lincoln's great maxim for a signboard:

*"With malice toward none—with charity for all."***Wanted: Actual Farm Experiences**

This paper has a department especially for the purpose of putting actual experiences of real farmers into print. Whenever two or three farmers are gathered together the talk runs almost altogether to actual farm work. The north forty and the east eighty are discussed, crops are raised all over again and the actual operations of farm management are argued and related. Many a Sunday afternoon have we sat on the sunny side of a straw stack, or the shady side of the barn, and talked to a fellow farmer, and our talk of what we had done and how we did it. We were not only interested in our own work—we were interested in the work of our neighbors, and always proud indeed if we could set forth a new idea or show a superior method. What we like most to talk about we like best to read about. This is true of all farmers, I think. And we venture to say the department most popular with our readers is Our Country Contributors. We have made a suggestion to the Contributor Editor which he has graciously favored. It is that our readers who have kept records for the past year send in a statement of the past year's business on their farms. In this connection we wish also to direct attention to the editorial in this issue entitled "Put the Farm on a Business Basis." Read it, then turn to the Country Contributors department and see what its editor has to offer you.

Seed Time is Near at Hand

Seed, soil and cultivation are the principal elements in the production of crops. It is up to you, Mr. Farmer, to make your soil as suitable for your crops as you can. A good seed bed, abundantly supplied with plant food, should be provided, by all means. If you can not make your soil as rich in fertility as you would like to have it, overlook nothing in your power to make it as fertile as you can. The less fertility your soil possesses the more necessary it becomes to put the seed bed in a perfect condition. Texture, temperature and moisture must all be considered and your work planned accordingly.

The quality of the seed you plant or sow is of utmost importance. A plant which grows from a poor seed is no better than a weed. Far better not to plant it at all. You can not raise a thoroughbred cow from scrub parents. You can not produce a powerful horse from a weak sire and dam. You can not have heavy-yielding plants, no matter what your soil and cultivation, unless the germs of the seeds you sow have in them the hereditary capacity for heavy production.

In our next issue will be an article on Seed, Soil and Cultivation which will be well worth your while to study. It will help you.

A Bushel of Wheat and a Bag of Flour

Here's something to think about: The average bushel of wheat is turned into four products—high-grade or "patent" flour, low-grade flour, middlings or shorts, and bran. In October, 1911, a bushel of wheat, for which the farmer received 97.8 cents, was converted into flour. The patent flour made from it retailed for \$1.038. The low-grade flour, middlings and bran from that same bushel sold wholesale for 32.6 cents. Total value of manufactured products, \$1.364, or 38 per cent increase over cost price. In 1906 the price paid for a bushel of wheat was 56.1 cents. The patent flour retailed for 76.9 cents. The byproducts wholesaled for 23.2 cents. Total for all, \$1.001, an increase of 80 per cent over cost of the wheat.

No matter what the price paid to the farmer, the slack is taken up between producer and consumer. The question is, should not prices to producers be at least as stable as the prices to consumers?

35 BUSHEL PER ACRE
was the yield of WHEAT

160 ACRES
FARMS IN
WESTERN
CANADA
FREE

On many farms in Western Canada in 1913, some yields being reported as high as 50 bushels per acre. As high as 100 bushels were recorded in some districts for oats, 50 bushels for barley and from 10 to 20 bushels for flax. J. Keys arrived in the country 5 years ago from Denmark, with very little means. He homesteaded, worked hard, is now the owner of 320 acres of land, in 1913 had a crop of 200 acres which will realize him about \$4,000. His wheat weighed 66 lbs. to the bushel and averaged over 35 bushels to the acre. Thousands of similar instances might be related of the homesteaders in Manitoba, Saskatchewan and Alberta. The crop of 1913 was an abundant one everywhere in Western Canada. Ask for descriptive literature and reduced railway rates. Apply to Superintendent of Immigration, Ottawa, Canada, or Canadian Government Agent.

ENTERED AT THE INDIANAPOLIS, IND POST OFFICE AS SECOND CLASS MATTER, UNDER ACT OF CONGRESS, MCH. 3 1879

No. 5

"Upon the the organization of rural interests depends the future of agricultural life, and upon the future of rural life depends American civilization. Organization is the cure for impoverishment of rural life. Organization of rural population is essential."—Dr. T. N. Carver. And we call upon the whole country to put forth, if it can, a better plan for successful, profitable and permanent organization than that of the Farmers Society of Equity.

Our lawmakers seem to be law crazy. Congressmen and legislators want to make a "showing" and fear

(Continued on Page 5)

(Continued on Page 5)

American Live Stock Values

W E ARE afraid people are prone to make extravagant figures, but as we propose to use the following only by way of illustration, their exactness does not matter so much. Comparatively speaking, they are no doubt correct. The figures are given as the annual report of a prominent business company that is considered reliable. The report shows that live stock on the farms of the United States has increased in value during the last twelve months no less than \$443,758,000. The total value of all classes of farm animals reaches the immense sum of \$5,596,024,000. Of this total, horses are worth \$2,185,555,000; mules, \$520,330,000; milch cows, \$1,032,960,000. The total value above given represents 50 per cent more than all the money in circulation in this country, and is nearly equal to all the deposits in all the national banks now in existence. The increase in value during the last twelve months is seven times as great as the total lumber production, and three and a half times more than the yearly production of the gold and silver mines of the United States.

The above figures and comparisons are not ours, but we take them from what is considered a reliable source. How do they comport with the everlasting official declarations that the farmers are not raising enough stock? True, these figures are values and not numbers. If it is true that the numbers have diminished, while the values have increased, it certainly proves that price is more important to the farmers than quantity, and those who are continually urging greater production with no provision for greater demand and better marketing are not the friends of the farmers nor of the consumers either, for, no matter how much the price to farmers is reduced, the price to consumers is as high as ever.

This brings to our minds the Lever bill, which has recently passed both houses of Congress and may be a law before this goes to press. It appropriates unconditionally \$10,000 to each state, a total of \$480,000. In addition to that it appropriates \$600,000 for the coming year, with a yearly increase of \$600,000 for the next seven years, to be distributed among the states on a basis of rural population,

provided each state appropriates a sum equal to the amount it is thus to receive from the government. After seven years the bill provides a permanent yearly appropriation of \$4,800,000 to be distributed in the same way.

This is practically hiring, bribing, the states to tax their people. The government will give the states a sum of money if the states will add an equal amount to the taxes now required to be paid by their people! And what is it all for? To teach the farmers how to farm and how to raise more stock. They already raise more stuff than they can sell at home, and great quantities are annually sent abroad. But here is the point: If more is raised the farmers will get less for it, and to assist in that accomplishment the gates have been thrown wide open to allow foreign nations to pile their stuff upon ours so as to force our prices lower and lower; not the prices charged the users—the market gamblers will attend to that—but the prices the farmers are to receive.

All public funds must be drawn from the people. This bill, therefore, compels the people to pay thousands of "experts" to teach farmers things the farmers in many cases know better than the "experts" do, and somebody else does the hiring!

And again: If the farmers' live stock has increased in value more than four hundred million dollars during the past year, how has it so recently become apparent that the farmers must borrow money and that a special arrangement must be provided for them to do that in such a way as to involve their lands and homes? It is because the money suckers have already got their tentacles upon the crops that are produced, but not upon the fields that produce them. If the farmers will not organize to prevent these wrongs and the dangers that threaten them, we can't help it. If our readers will preserve these papers for their children to read fifty years hence they will then know what you fail to see now.

The remedy is in the marketing. Increase the demand for your products, or, rather, get to all the demands and supply them, and thus secure your equitable share of the wealth you create. Then you may be able to meet these unfortunate conditions that are forced upon you.

The Farmers and Money

F ARMERS need money, and they deserve it and ought to have it. Their business is that of public service, a service that is supposed to be paid for, and it is one the world could not do without. If that service or the products of the farmer's labor are properly paid for, why should the farmer have to look to some other source for the money he needs? It is better to reason these matters out than it is to jump to conclusions.

It seems to be the conclusion now among the ruling classes that the farmers must borrow money. From whom are they to borrow it? Who has a surer way of making money than the farmers? Who creates more wealth than they? "Come now and let us reason together."

In 1912 the Department of Agriculture figured that the annual gold production of the United States was \$92,989,000 and the annual production of silver was \$63,761,000. That's lots of money, isn't it? But the United States is not the only country that produces gold. The same authority says the annual gold production of the entire world is \$474,333,268. That's some money, for a fact. But miners are not money lenders. If they were, would the farmers need to borrow money from them? The same authority tells us that, while the miners were digging all this gold and silver

out of the earth, the poultry of the United States created for the American farmers wealth to the amount of \$570,000,000! Just the poultry! More than all the gold produced in all the world! Now who should lend or borrow money—the gold and silver miners or the poultry raisers? But stop. The same great official department declares that the poultry and other farm products, the wealth created by the farmers in 1913, was more than ten billion dollars. We do not know how much gold and silver were produced last year, but it was not more than that quoted above, and our farmers last year produced more than twenty times as much value as all the gold miners of the world!

Now, if the farmers need to borrow money it is because they do not get what belongs to them. That they do not is a fact all must admit. But would an extra chance to borrow make it any better for them? The reason they do not get their own is that there are absorption systems, marketing and otherwise, that gather in the money before it gets from the consumers of the farm stuff to the producers of it. The consumers pay it all right, and more than they ought to pay, but the toll gates between the farms and the kitchens gather it in and pile it up on the side. Thence it is drawn in by the suction pumps of accumulation and is rapidly absorbing the entire wealth of the country. And these absorption powers are organized. We

need not refer to the marketing boards of trade and the business controlling Wall street and other exchanges, but there now seems to be a National Association of Credit Men, and it is they that have originated and are urging the attractive but dangerous rural credit scheme. The wealth absorbers have a successful marketing pull on the products of the farm, but as yet they have been unable to draw upon the farms themselves. But now

"groups of farmers are to be authorized to mortgage their lands, with power to issue bonds to raise funds from distant money markets," the bonds to be additional suction pumps to draw on the lands as well as the marketing system now draws on the land's products. Farmers, change the marketing system. Get the benefit of the wealth you create and then you won't need to pawn your homes to Wall street.

Put the Farm on a Business Basis

I F EVERY FARMER would open a book account with his farm, putting his farming operations on the same business basis which the grocer provides for his store, or the banker for the bank, or the miller for his mill, three years would see a vast change taking place in the agricultural world.

The task is not at all a difficult one. True, a simplified system of farm book-keeping must be adopted. But the boy, or the girl, or the wife will enjoy the task of "keeping books." Not only will they enjoy it, but nothing will ever occur to create more real interest in the farm, and all work connected therewith, than the knowledge of just what is being gained, or lost, made or wasted on the farm.

A good way to start is to put the farm on a stock-share basis. Take an inventory of everything at cash value. Suppose the farm contains 200 acres, worth \$100 per acre. The equipment, consisting of animals and machinery, is worth say \$3,000. There you have a capital stock of \$23,000, which can be divided into 230 shares at \$100 per share. Give John 50 shares, Andrew 50 shares, wife 50 shares, daughter 30 shares and you have 50 shares for yourself. Then keep an account with each department on the farm—the dairy, poultry, grain and hay, live stock, orchard and garden, etc. A simple account is sufficient—one that will show how much time and expense was given to each department and how much it yielded in returns. At the end of each month, or each quarter, as preferred, make up a monthly or quarterly statement. At the end of the year make up an annual statement and take a new inventory. After allowing for the expenses, and providing for expenditures for the coming year, paying the firm 3 per cent

interest on capital invested (in this case it would be \$23,000), then see if you can pay yourself and family current wages for your labor, and any dividends on your shares.

What benefit will all this be? It will make you watch each feature of your farming with greater care. It will show you many a place where you are wasting time, donating labor and losing money where it is not at all necessary. It will induce you to work into those lines for which your farm is best adapted. It will arouse new enthusiasm, ambition and determination to make the farm pay better, year after year. It will create a deeper interest in your work day by day, for the books will show you as nothing else can the value of time and thoroughness. It will make your boys get right down to business and dig to make those shares of theirs pay dividends, and to make a fine showing in the departments over which they have charge. Don't you know that one great reason why boys leave the farm for the business world is their desire, just as deep and as strong as your own, to have charge of something and make a showing? To test their ability to do things and make the doing pay? Give them a business chance and see what happens. It will encourage wife and daughter to carry their end of the load with greater faith and hope and cheerfulness. They will, naturally, have charge of the poultry department and an interest in the dairy. No one will be more eager than they to watch the leaks, the wastes and to make everything count, so the monthly, quarterly and annual balances will grow larger and larger and their "shares" in the business will be paying them dividends, their work paying wages.

Farming is a business. Treat it as such and it will become a far more profitable vocation.

Intensive Farming not the Best

T HAT the American type of farming needs large areas and that modern machinery, with the use of more horses and fewer men, has made the small farm an efficient unit, are conclusions of the Department of Agriculture, which has recently completed a farm-management survey in the corn belt.

The states in the corn belt were chosen because they excel almost all other regions in wealth of farm products. On rich soil with ample rainfall, a system of agriculture is found that is unequaled as an example of the expansive type of farming. This type is developed on the basis of the farm work horse as the means of motive power. Data from 700 farms in this rich area have been taken as a basis, and, although this represents a relatively small portion of the farms of the United States.

In the region studied the owners made good profits. In addition the operators had a house to live in and those products which the farm furnished toward their living. The landlords, on the average, received 3.5 per cent. on their investments. Assuming that the year in which this study was made was a normal one, a labor income of \$870 to the operator, whether owner or tenant, and a return of 3.5 per cent. on the capital invested may be expected.

The farmers making the lowest labor incomes are on big farms, who fail through inefficient management. Poor crops, low prices for products sold, poor stock, failure to work and unused capital are the main causes contributing to their failure. Modern machinery, with the use of more horses and fewer men, has made the farm of less than 100 acres in this region an inefficient unit. In the corn belt states the family-size farm is the most desirable. It provides work for the farmer and his sons and permits the best use of men, horses and machinery.

All the farmers in the regions studied are following the same general expansive system of agriculture, developed on the basis of maximum product per man. Within this system two important types are found. One is the crop form where 50 per cent. or over of the total farm receipts are derived from the sale of grain. The other type is the livestock farm, where the farmer markets his crops largely through hogs, horses and beef cattle. The number of men following each type vary greatly in different years according to the relative price of cattle and hogs. However, in the present farm investigations, the livestock men had a larger area and more cattle and were receiving a much higher labor income.

Recklessness of Those Who Govern

(Continued From Page 3)

their people will not be impressed with them unless they accomplish something—secure the enactment of laws. During the sitting of the sixtieth Congress there were presented before it 39,505 bills and resolutions, and 646 of them were enacted or adopted. The sixty-first Congress had 44,867 bills before it and 882 of them became laws. The sixty-second Congress had 38,574 bills before it and passed 716 of them. The present Congress is the sixty-third and what it will do remains to be seen.

The number of private laws enacted by the American Congress is almost a matter of unbelief, and a knowledge of it will certainly amaze the common people. Private laws are for the benefit of individuals, or possibly to legalize some transaction concerning which there is doubt as to its legality. They are not public acts and are not for the benefit of the public, but they are often harmful in their public effects. Not so many private laws are enacted now as there used to be. The fifty-ninth Congress had before it 34,879 bills and resolutions. Of these were enacted 692 public and 6,248 private laws. The writer of this article once sat in the gallery of the Senate at Washington and witnessed the adoption in a few hours of hundreds of private acts as fast as the titles could be called and without a single vote being asked for or taken. We suppose they had previously been considered and approved by a committee. But that is not the way the people expect the laws to be made, and they send representatives to Congress and senators from the states not so much to make laws as to guard the interests of the people.

And state legislatures are as profuse and inconsiderate in making laws as is the Congress. Within a single year the legislatures of the states enacted 18,719 new laws. The Michigan legislature had 981 bills before it and made 407 new laws. North Dakota had 1,280 bills and made 291 new laws. Kansas had 1,773 bills and 234 of them became laws. Iowa had 1,279 bills and resolutions and adopted 409 of them. An Iowa paper asserts that the legislature of that state actually passed amendments to laws that had long before been repealed!

But enough of this. There is not only a foolish excess of bills presented and of laws enacted, but there is a shameful extravagance in expenditure. It is seldom we have a Congress now whose expenditures fall below a billion dollars. It is foolish to say all that money is wisely expended. One item alone may well be studied—the expenditures for the army and navy. We are at peace with all the world, and there is no danger that any part of the world will attack us. Besides, there is an active world-wide movement for the abolition of war, for perpetual peace, and our own secretary of state is a successful leader therein. The nations are joining him in it and agreements are being entered into. Yet millions upon millions must be spent every year for war! Our army and navy expenses for the last fiscal year were \$244,177,000, which equals a charge of \$2.65 against every man, woman and child in the United States. Every soldier added to the army costs the people an additional \$1,300 a year. All these expenditures must be paid, and there is nobody to pay them but the people. Is it any wonder taxes are high and are still going higher? The money to meet these extravagant public expenses, county, state and national, is collected by direct taxation of the property owned by the citizen or by indirect taxation included in the higher prices that must be paid for purchased commodities because of tariffs and internal revenue.

And the rulers themselves, though chosen by the people, do not seem to be overconscientious. They get to

Don't Miss This One

A certain advertiser, whose first advertising in UP-TO-DATE FARMING is about to appear, said:

"I am going to advertise in UP-TO-DATE FARMING and I am confident it will get results. I believe your paper reaches the best farmers, because it is the only national power that is teaching and organizing farmers to get better prices for their crops. Your readers must necessarily be intelligent, business-like, practical and prosperous farmers, and I'm sure they give all the credit due UP-TO-DATE FARMING for what it is doing. They can not fail to see that it is worth more to them than all the other farm papers combined, no matter how many they read. They ought to boost UP-TO-DATE FARMING every chance they get."

Whereupon the advertiser was told that among this and the many other good things to the credit of UP-TO-DATE FARMING, this paper protected its readers by publishing only reliable advertising.

Needless to say, the advertiser referred to, like every other one in UP-TO-DATE FARMING, is reliable.

UP-TO-DATE FARMING boosters do their boosting by patronizing UP-TO-DATE FARMING advertisers.

See guarantee below.

Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

moving along in ruts, and generally those ruts have personal flowers strewn along them. For instance, in the early days congressmen had to go from their homes to Washington by the stage coach or other slow and expensive process. To meet that expense independent of the salary, and to make it proportionate as to distance, a law was enacted allowing congressmen 20 cents a mile from their homes for each session. Afterward came the railroad and other cheap and rapid means of travel, getting as low as 2 cents a mile. But that has never changed the congressional 20 cents a mile. In 1905 Congress adjourned—expired in fact—at noon March 4. President Roosevelt called a special session to meet at 1 o'clock on the same day. There was no time for a single member to go home and return—only an hour between the close of one Congress and the assembling of the next. Yet the congressmen were paid 20 cents per mile for a purely imaginary trip from their homes to Washington! If any one refused we will be glad to publish that fact over his own signature.

And there is now another craze, the appointment of special committees and commissions. Everything must be investigated, and commissions must be appointed to take charge of practically everything—at least to the extent of not only being burdensome, but ridiculous. And an army of "experts" must be employed to teach great things to the people. This is notably the case in the Department of Agriculture, where a free and voluntary newspaper "work shop" is evidently maintained. In addition to the bulletins and crop reports so numerous issued, some of them useful and many of them not, there go out daily hundred and thousands of newspaper articles, editorial comments on these issues, some of them simply ridiculous and on the most foolish subjects, and very few of them receive any attention from the press. Yet their preparation, printing and mailing cost thousands of dollars. But they furnish work and wages to a horde of "experts."

Now, kind reader, this is a longer editorial than usually appears in UP-TO-DATE FARMING. It is not at all in opposition to the government, and it is entirely nonpartisan. But these evils must be opposed to be remedied, and they must be known to be opposed. The public press is the means of public information, and the partisan press is handicapped. No matter of what party, it does not wish to offend the politicians. Neither do we, but we are working in the best interest of ALL the people, especially the great farm population, upon whom so much of

the national welfare depends, and these facts appeal to them strongly for organization, a means of acting unitedly for their own and the public good. We do not mean for them to organize for party purposes, but for the more successful management of their own affairs—to increase their ability to get the greatest possible production from their fields, orchards and gardens, and then to find all the demands for their stuff and supply those demands at prices equitable to both grower and user—the adoption of a better marketing system for the good of both producers and consumers. This is the prime reason for rural organization, but when so organized the farmers may then express themselves on the hundreds of questions that so sadly need their united influence, and the sincere honesty and progressive thought of our modern rural population—safe because it is so far removed from the official ruts that have led into so many evils. The safety of republics and the welfare of the masses are always with its common people.

Big Waste of Fertilizing Material

SEVENTY-FIVE PER CENT of highly valuable fertilizing material in the form of tankage and blood from the country slaughter of food animals is now wasted throughout the country districts.

Tankage, such as bones, horns, hoofs, hair, etc., contains a large percentage of nitrogen and other products used in commercial fertilizer and in the larger packing houses is carefully saved. In country killing, however, only 25 per cent of the tankage and blood is saved for fertilizer. Dried blood is perhaps the richest in nitrogen of all the organic materials used in fertilizers. Unadulterated blood, when quite dry, contains 14 per cent of nitrogen, but as obtained on the market its content varies from 9 to 13 per cent.

From the figures estimated by the Bureau of Animal Industry, Department of Agriculture, as representing the total slaughter of cattle, calves, swine and sheep in the United States, in 1912, it has been calculated that if all the materials rendered available by this slaughter had been saved and converted into tankage and dried blood, they would have produced 222,535 tons of tankage and 79,794 tons of dried blood.

The introduction of a co-operative abattoir system among American farm-

ers would result in an increased utilization of blood and tankage for fertilizing purposes. In Denmark, country killing is being practiced on a co-operative basis in small country abattoirs, and the blood is carefully preserved.

Smile Awhile

No Chance

Doctor—See to it that your husband has a shower bath every morning.
Wife—But, doctor, it is only once in a while we have a morning shower.

Pleased Everybody

"Yes, we have decided to send our daughter to the city to train her voice."
"That was just the thing to do. The neighbors will all be glad."

Same as They Used to Be

"That young Perkins stays very late when he comes to see you, Nora. Hasn't your mother said anything about it?"
"Yes, pa, she says the young men now are just like they were when you was young."

Understood the Situation

"You don't suit me at all," said the mistress to the new hired girl. "I thought you said you had worked for a lady."
"So I did, ma'am, until I came here," replied the girl.

To Economize

Small Son—Papa, didn't you say it saves money to save our clothes?
Father—Yes, my son, it is a great saving to save our clothes.
Small Son—Well, papa, I expect if I had a pony it would save lots of shoes.

An Appropriate Present

Little Girl—Papa, do you know what I am going to get you for a birthday present?
Papa—No, what is it, dear?
Little Girl—A nice shaving cup with flowers all around it.
Papa—Why dear, I've already got one like that.
Little Girl—No, you haven't. I dropped it just now.

Peace or War

Wife—Here's an article on "How to keep the world forever at peace."
Husband—What is the plan—for nobody to get married?

Got Tottery

"I understand Billix was terribly upset when the bank broke."
"Yes, I understand he lost his balance."

Kept Even

Little Country Girl—You needn't be so stuck up if you do live in town. We keep a hired man.
Little Town Girl—That's nothing. We keep a boarder.

Requires Care

"I always say what I please when I'm with my wife."
"So do I, but I'm very careful that it pleases both of us."

Doubtful Location

"Doctor, I suppose you are kept very busy now."
"Yes, I can scarcely keep track of my patients."
"I don't doubt it, for there is no telling where the dead may be buried."

Busy Days

"Where's the president of this railroad?" asked the man who called at the general offices.
"He's down in Washington, attendin' th' session o' some kind uv an investigatin' committee," replied the office boy.
"Where is the general manager?"
"He's appearin' before th' Interstate Commerce Commission."
"Well, where's the general superintendent?"
"He's at th' meetin' of th' legislature, fightin' some bum new law."
"Where is the head of the legal department?"
"He's in court, tryin' a suit."
"Then where is the general passenger agent?"
"He's explainin' t' th' commercial travelers why we can't reduce th' fare."
"Where is the general freight agent?"
"He's gone out in th' country t' attend a meetin' o' th' Grange an' tell th' farmers why we ain't got no freight cars."
"Who's running the blamed railroad, anyway?"
"The newspapers and th' legislatures."

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

GENERAL STATEMENT of trade conditions by Bradstreet's follows: Improvement. Storms retard, but do not check expansion. Buyers held back slightly. Retail trade benefited. Stocks of winter goods reduced. Footwear and coal note chief activity. Industrial capacity expanding. Three-quarter time or better against half time six weeks ago. Steel, textiles, coal, rubber goods and brass and copper finishing note activity. Collections fair to slow. Securities dull on reactions. Money easy, but abnormal softness shows signs of passing. Winter wheat, snow-covered, promises excellently.

The country has been unusually afflicted by several storms since our last report. Excessive rains in some portions, resulting in floods; great snow storms, high wind and very cold in much of the balance of the country. Nearly every section had its share of the extreme conditions, but outside of some heavy losses from floods in the extreme west, crops and business have been benefited. The former by the covering of snow and the latter by belated winter

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on February 14, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase.)

	Feb. 14, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	66,073,000	—1,854,000
CORN	20,813,000	X 1,004,000
OATS	27,283,000	—2,151,000
BARLEY	7,181,000	—983,000

The visible supply of wheat in Canada on the same date was 51,009,000 bushels. This is 2,782,000 bushels less than two weeks before and 4,597,000 bushels more than a year before. The visible supply of oats was 18,759,000 bushels on the same date, which is 392,000 bushels more than two weeks before and is 7,867,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Feb. 20, 1914, two weeks before and a year before as follows:

	Feb. 20, 1914	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	96 3/4	96 1/4 @ 96 3/4	1.03 @ 1.08

New York			39

Future Grain Prices

Chicago grain futures closed on February 20, 1914, and two weeks before as follows:
Wheat—May, 94 1/4; July, 89 3/4. Two weeks before, 92 3/4 and 88 1/2 c respectively.
Corn—May, 66 3/4; July, 65 3/4. Two weeks before, 65 3/4 and 64 3/4 c respectively.
Oats—May, 40 1/4; July, 39 3/4. Two weeks before, 39c and 38 3/4 c respectively.
Winnipeg, Canada—Future wheat prices closed February 20 as follows: May, 93 3/4; July, 95 1/4. Two weeks before, 90 1/4 and 92 3/4 c respectively.

Cotton

New York, February 19.—Cash cotton closed: Middling upland, 12.35c; middling gulf, 12.20c. The price is 35c a ewt. higher than two weeks before. A year before the prices were 12.60c and 12.85c respectively.

MOVEMENT OF COTTON—BALES.

	Ending Feb. 20, 1914	Ending Feb. 13, 1914	Ending Feb. 21, 1913
For the week	222,005	284,233	187,097
For the season	12,179,120	11,958,540	11,632,055

VISIBLE SUPPLY—BALES

World's	6,053,363	6,091,855	5,458,681
American	4,413,363	4,506,855	4,260,681

The American visible decreased 137,819 bales in two weeks and the world's visible decreased 52,819 bales.

Chicago Produce Market

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	30	60	127
Tuesday	45	50	58
Wednesday	50	30	45
Thursday	25	45	74
Friday	36	20	75

Total, 5 days... 196 205 379

Market was quiet and steady at unchanged prices. Receipts were moderate, reported at 36 cars, and some of them went direct to jobbers, while others were disposed of at outside points. Only a few cars came down to team tracks and they were taken.

Sales reported were: Per bushel—Wisconsin, sacked triumphs, 1 car seed stock at 56c, 1 car good table stock at 60c. Rurals—1 car fancy at 72c. Bulk, Dusty Rurals—1 car at 73c.

Per bushel, bulk or sacked, Wisconsin Triumphs.
Burbanks and Kings, poor to good... 55 @ 60c
Round white... 65 @ 68c
Dusty Rurals, fancy... 70 @ 73c
Michigan, round white... 65 @ 68c
Idaho, Pearls... 80 @ 85c
Oregon, Pearls, ungraded field run... 70 @ 75c
Fancy graded, bright... 80 @ 85c

NEW POTATOES—Trade quiet. Supply is moderate.

Barrels, Bermuda, reds, No. 1	\$6.50 @ 7.00
No. 2	\$5.50 @ 6.00
Hampers, Florida, red, No. 1	2.50
No. 2	2.00 @ 2.25

The price of northern potatoes is 5c per bushel lower than two weeks before. The price of Idaho and Oregon potatoes is unchanged from two weeks before. Bermuda new potatoes are unchanged to 50c per barrel higher than two weeks before. Florida potatoes are unchanged from two weeks before.

SWEET POTATOES—Only nice, even running goods called for. Jerseys meet with fair sale and rule steady. Other eastern stock quiet. Illinois are dull and slow. Few of these are of the quality desired. They run too uneven. Any stock really common from any cause hard to sell.

Barrels, Illinois, fresh, well packed, sound and uniform... \$2.25 @ 2.50
Uneven in quality, hard to sell... 1.50 @ 2.00
Hampers, Delaware... 75
Jersey... 1.00
Some very fancy quoted a shade higher.

Illinois... 50 @ 75
Some eastern have come in badly frozen. They can not even be picked over. These are merely held for bids.
Illinois potatoes are 25c per barrel lower than two weeks before. Delaware hampers unchanged to 10c

higher than two weeks before. Jerseys are unchanged. In southwestern and western markets, Arkansas and Alabama sweet potatoes are quoted at 70c per bushel. Our market reports, referring to southern sweets, say: "Arrivals are mostly of poor quality and selling for any price obtainable. Nothing but the best stock brings quotation."

BEANS—Remain steady. Dealers report no changes, and in consequence little can be said about the market. Consignment offerings—There are none to speak of. Quotable:

Pea Beans—Hand-picked, choice	\$2.05 @ 2.10
Common	\$1.75 @ 2.00

	Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels	Bushels
— 263,000	— 5,654,000	X 2,155,000	
X 3,817,000	X 3,051,000	X 6,962,000	
X 1,154,000	X 13,131,000	X 16,370,000	
— 187,000	X 985,000	X 3,388,000	

Red Kidneys, choice... 2.20 @ 2.90

Brown Swedish, long... 2.00

Round... 2.35

Red Kidneys are 10c per bushel lower than two weeks before. Other kinds are unchanged.

HAY—Receipts, 1,198 tons. Low and medium grades of Timothy and Prairie Hay in fair request and steady. Supply liberal. Choice grades in good demand and offerings small. Market firm.

Choice Timothy Hay	\$17.00 @ 18.00
No. 1 Timothy	15.00 @ 15.50
No. 2 Timothy	12.50 @ 13.50
Iowa and Nebraska Prairie	10.00 @ 11.50
Illinois and Wisconsin Prairie	6.00 @ 7.00

Choice Timothy Hay is \$2 per ton higher than two weeks before. Other grades from \$1.50 to \$2.50 per ton higher than two weeks before. Iowa and Nebraska Prairie Hay unchanged to \$1.50 per ton higher than two weeks before.

STRAW—Rye Straw quotable at \$7.50 @ 8. Oat Straw at \$7 @ 7.50. Wheat Straw \$6.50 @ 7.

There is no change in the price of straw from two weeks before.

BROOM CORN—Steady for best grades, with a quiet trade. Common and damaged corn very dull.

Per ton, Illinois Corn	\$120 @ 160
Oklahoma	100 @ 150
Damp and damaged less.	

There is no change in the price of broom corn from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	8,080	7,956	7,335
Tuesday	9,147	7,986	9,240
Wednesday	8,016	6,366	6,403
Thursday	8,745	5,972	5,877
Friday	7,704	5,475	6,522

Totals... 41,692 33,755 35,377

The feeling is easy and prices show a further decline of 1/2 @ 1/4 c for the day.

Fresh, Firsts	25 @ 25 1/4 c
Ordinary, Firsts	24 @ 24 1/2 c
Seconds	21 @ 22 c
Thirds	22 @ 23 c
Miscellaneous, cases included	24 1/2 @ 25 1/4 c
Cases returned	24 @ 24 1/4 c
Refrigerator, according to quality	21 1/2 @ 22 1/2 c

The price is about 1c per dozen lower than two weeks before.

Fruit

APPLES—Business has been somewhat on the gain since the weather has moderated. Barrel stock is selling very well and ruling firm, with an upward tendency of prices. Most kinds were quoted a shade higher. Box apples also are reported moving better, to be firm, and for some kinds prices have firmed up a little. Some prices are as follows (barrels): Jonathans, \$6 @ 7; Northern Spys, \$5.50 @ 7; Ben Davis, \$4.75; Baldwins, \$5.50 @ 5.75; Grimes Golden, \$4 @ 4.50; Greenings, \$4 @ 5.50; Kings, \$5.50 @ 5.75.

Some prices for box apples from the west:
Arkansas Black, \$2.25 @ 2.50; Rome Beauty, \$2 @ 2.25; Jonathans, \$1.75 @ 2.25; Grimes Golden, \$2 @ 2.50; Delicious, \$2.50 @ 2.75; Spitzenberg, \$2.25 @ 2.50; Ben Davis, \$1.75 @ 2.

We Wish So Too

I like your paper better and better. It is a hummer. Keep right on, Mr. Editor, telling the plain truth and the plain people will be back of you. May God hasten the time when right shall prevail. I wish every farmer in the United States could read the February 1st number and would act at once. —Amos Felts, Arkansas.

Books All Farmers Should Read

Farmers of Forty Centuries, by F. H. King. Published by Mrs. F. H. King, Madison, Wis., \$2.50. Dr. L. H. Bailey of New York, one of the world's greatest authorities on agriculture, in writing the preface to this book, says: "It is the writing of a well-trained observer who went forth to study the actual condition of agricultural peoples. The first condition of farming is to maintain fertility, which condition the oriental people have met and solved in their way, and we can profit vastly by their experience. Lessons in conservation of soils is the message Professor King brings from the far east." Professor King has written vividly and most entertainingly of farming in Japan, China and Korea, on farms which have been farmed over four thousand years, describing methods of soil and crop culture and teaching many needful and illuminating lessons on soils and their treatment, which will give every farmer who reads the book a broader knowledge of the capabilities of mother earth, as well as a knowledge of how farmers live and work in the oldest lands of civilization.

AS IT OUGHT TO BE IN EVERY FARMING COMMUNITY.

weather that helped merchants move their winter goods. Also the cold weather furnished the ice crop that it began to look as though would be a failure.

A Washington (D. C.) dispatch places the world's wheat crop of 1913 at above 4,000,000,000 bushels, which is the greatest one ever raised. The next largest was 1912, 3,759,000,000 bushels. The largest crop in the period 1891 to 1900 was 2,948,000,000 bushels in 1898. In the next ten-year period, 1901 to 1910, the greatest yield was 1910, 3,575,000,000 bushels. The wheat crop is gradually increasing, but hardly as fast as the population in wheat-eating countries increases.

Prospects for the growing crop of wheat could hardly be better—it is nearly perfect. Also every week now reduces the chance for winter damage. With such an excellent prospect for the next crop there is not much likelihood of prices being much better. The visible declined nearly two million bushels and it is lower now than at the same time last year, but is two million bushels more than two years before. The change in price is not worth noticing.

The corn visible shows a further increase, notwithstanding the short crop. This is an indication that our growers are afraid of foreign corn. We believe the fear is not well founded, because of the very small amount of corn produced in all other countries. But this is only one of those examples where a little extra supply often affects the price of a whole crop. We believe corn should be held. Prices of corn declined nearly 3 cents at Chicago, but is about unchanged in other markets.

Oats visible decreased over two million bushels and the price is a little higher than two weeks before.

Cotton is higher, potatoes are lower, with prospect of higher prices because of the storms that have interfered with shipping. Sweet potatoes some lower, beans about unchanged, but hay is sharply higher.

Advice

Wheat—We would like to advise holding it for \$1 or more, but the future price depends almost entirely on the progress of the present crop. If damaged by winter, which is getting more remote each week, the price will go up. If a bumper crop in 1914, we are very apt to see the lowest price on wheat in years. Corn—We would hold it. Oats—We would hold it. Cotton—Market gradually. Potatoes—Market gradually. Hold some for later marketing. Hay—Market gradually.

The following tells the balance of the market story:

To Bring Seller and Buyer Together

This department is exclusively for producers and handlers of farm produce, grain, live stock, cotton, vegetables, fruit, hay, poultry, etc. :: :: ::

This department is instituted to enable farmers to sell at the right time and place, and to reliable customers; to help you get the real worth of your crops, your rightful share of the consumer's dollar—therefore do not do any marketing without first consulting with our market experts. If you want to obtain the highest prices, report your crops on the blank below and get the benefit of our advice and service.

The Farmers and the Good Roads Problem

IN Eastern Pennsylvania certain portions of that historic highway known as "Old York Road" are still controlled by turnpike companies, and the tollgate continues to be a respected institution. A company controlling about two miles of this old road, over which Washington and the continental army marched at various times, has had a profitable investment, paying from 7 to 8 per cent. dividends. In by-gone days another section of turnpike leading into Old York Road paid its owners as high as 12 per cent. Good stone and gravel pits made the maintenance of this road comparatively easy, and the much-talked-about patrol system was established many years ago. Always there were men at work cracking stone by hand and putting it into such depressions and washouts as occurred. But in spite of its solid bed and constant supervision, the road is going to pieces, as does the average road when subjected to automobile traffic. The rapidly revolving tires disperse the rock-dust or binding material in clouds, and the stones, upon exposure, are ripped out and hurled aside. The situation is akin to that in every rural community and farmers are up against a problem. They must decide whether they will submit to bad roads, pay excessive annual maintenance charges or pay for a road so solid that it will never get out of repair. In many localities farmers have dismissed the first two propositions as impossible and they are building durable roads. And some of them believe it is better to do this by local taxation rather than to have the state take over and control the roads, thus depriving them of the right to say what type of road shall be built. Farmers defeated the recently proposed 50-million dollar bond issue in Pennsylvania. They wanted the opportunity to build roads that would not be utterly destroyed long before state or county bonds should mature. In Connecticut, Maryland, New Jersey, New York, Delaware and Pennsylvania, both state and local communities are turning to the concrete road as the solution of their problem and with excellent results. Taking a 16-foot concrete road as a basis, highways of this character have cost on the average about \$12,000 per mile, while maintenance costs have been practically nothing. For example, in Bellefontaine, Ohio, a concrete road put down twenty years ago has cost less than \$25 per mile per year for maintenance, while the average maintenance cost of macadam roads in five eastern states in 1912 exceeded \$800 per mile per year. The farmer, in adopting concrete, has figured the matter in this way: A road is an investment. The most conservative estimate of maintenance cost on macadam per mile per year would be certain to reach \$300 if the road is subject to motor-driven traffic and kept passable at all seasons. An equally conservative estimate for construction is \$6,000 per mile. The \$300 maintenance cost represents interest on \$6,000 at 5 per cent., thus making the real investment \$12,000 per mile, or the cost of a indestructible concrete road. Maintenance costs on 500 miles of concrete road would, at the expiration of seven years, be only \$37,500. In the case of macadam, basing costs on New York and New Jersey figures for 1912, repair costs would reach the enormous total of \$1,350,000. Where concrete roads are very narrow, say 9 feet wide, and have a dirt road at the sides, they could be built for \$7,500 per mile. Maryland has built excellent concrete roads of standard width for less than \$12,000 per mile.

It is upon the above economic basis that farmers are beginning to look at the road question.

Constructing a Typical 16-Foot Concrete Road Near Mason City, Ia.

But aside from moderate first cost and practically negligible maintenance costs, the popularity of the concrete road is rapidly growing in rural communities due to the experience of those who have used it. For the farmer it is the ideal highway. Described briefly, the building of a concrete road consists of putting a wet and mushy mass of Portland cement, sand and stone in the center of a highway, where it hardens into imperishable rock. The accompanying illustrations give a very good idea of the building of a road and its appearance when finished. The first picture shows the construction of a concrete road near Mason City, Iowa. The concrete has been placed between rigidly staked side forms. The road is then troweled with wooden floats. The view of the finished road in Maryland shows its admirable surface. This type of road appeals especially to the farmer and his family, because it provides them at all seasons with an excellent place to walk as well as a thoroughfare for vehicles. It is a fact that in Wayne county, Michigan, children go to and from school on roller skates over the wonderful concrete roads of that locality. Horses never slip or fall upon these roads and will draw twice or three times their accustomed load. In Wayne county one farmer has driven an unshod horse over the concrete roads for a long period of time without injury to the animal. It is needless to say torrential rains cannot wash through these roads. The water must go over or under them. Another especially good feature of the concrete road is its freedom from dust as well as

mud. Whenever farmers have used these roads they are enthusiastic in their commendation, not only because of their great durability and low maintenance cost, but because in every sense they represent the ideal highway and, therefore, the solution of the road problem as it applies to rural communities.

THE EFFECT OF GOOD ROADS ON LAND VALUES

THE direct effect that changing bad roads into good roads has upon land value and the general economic welfare of a community is shown in several concrete illustrations gathered by the U. S. Department of Agriculture. The Department has issued a statement on the subject, based upon a mass of information gathered by the Office of Public Roads, which is making a special study of the economic effect of road improvement in the country. According to the data gathered, where good roads replace bad ones, the values of farm lands bordering on the roads increase to such an extent that the cost of road improvement is equalized, if not exceeded. The general land values, as well as farm values, show marked advances, following the improvement of roads.

Among the illustrations cited by the Department are the following:

In Lee county, Virginia, a farmer owned 100 acres between Ben Hur and Jonesville, which he offered to sell for

\$1,800. In 1908 this road was improved and, although the farmer fought the improvement, he has since refused \$3,000 for his farm. Along this same road a tract of 188 acres was supposed to have been sold for \$6,000. The purchaser refused the contract, however, and the owner threatened to sue him. After the road improvement, and without any improvement upon the land, the same farm was sold to the original purchaser for \$9,000.

In Jackson county, Alabama, the people voted a bond issue of \$250,000 for road improvement and improved 24 per cent. of the roads. The census of 1900 gives the value of all farm lands in Jackson county at \$4.90 per acre. The selling value at that time was from \$6 to \$15 per acre. The census of 1910 places the value of all farm lands in Jackson county at \$9.79 per acre, and the selling price is now from \$15 to \$25 per acre. Actual figures of increased value following road improvement are shown.

As the roads in no way affect soil fertility or quality of the farm, advances are due essentially to the decrease in the cost of hauling produce to market or shipping point. Farms are now regarded as plants for the business of farming, and any reduction in their profits through unnecessarily heavy costs for hauling on bad roads naturally reduces their capitalization and values. With reduced costs for hauling, profits are increased; with the result that the farm plant shows satisfactory earnings on a higher capital value.

The automobile also has begun to be an important factor in increasing rural values where good roads are introduced.

Immigration is particularly marked where road conditions are favorable; in fact, the figures of the Department seem to indicate that good roads indirectly increase the demand for rural property; and the price of farm land, like that of any other commodity, is ruled by the relations between demand and supply.

GOOD ROADS IN CONGRESS

CONGRESS has the roads question under thorough discussion. From the committee on roads of the House a bill was passed with considerable expedition, for it had been drafted quite skilfully in order to obtain a great amount of support from the thickly populated states. Two courses of action are left to the states in availing themselves of roads appropriations from the central source. A state can employ its quota of the \$25,000,000, the distribution of which is based upon population and rural free delivery routes, in the construction and maintenance of whatever roads may be determined upon by its Highway Department in co-operation with the Secretary of Agriculture. The national government would bear one-half the cost, but no construction shall commence "until the portion of the cost thereof which is to be provided otherwise than by the United States has been made available." The other plan which a state may adopt is the original Shackleford roads-rental plan for rural free delivery routes, with the highways divided into classes a, b and c—\$60, \$30 and \$15 per mile.

While the measure commanded much discussion in the House, it is a certainty that it will receive even greater attention in the Senate, which has a tendency to pass upon all measures of a substantial expenditures character more carefully than is usually the case in the popular branch of the government.

A 12-Foot Concrete Road at Whitehall, Md.

Spring the Proper Time to Work Roads

IT is a great mistake to put off working roads until August or September, according to road experts of the U. S. Department of Agriculture. The roads should be worked when the soil is damp so as to make the soil bake when it dries out. If the roads are worked when they are dry, it takes more power to draw the machine and besides dry earth and dust retain moisture and quickly rut after rains. The use of clods, sods, weeds or vegetable matter in building earth roads should be avoided because they also retain moisture.

If the working of the roads is deferred until the latter part of the summer when the surface is baked dry and hard, they are not only difficult to work, but the work is unsatisfactory when done. Earth which is loose and dry will remain dusty as long as the dry weather lasts, and then turn to mud as the rains begin. By using the road machine in the spring while the soil is soft and damp, the surface is more easily shaped and soon packs down into a dry, hard crust, which is less liable to become dusty in summer and muddy in winter.

Repairs to roads should be made when needed and not once a year after crops are laid by. Because of its simplicity, efficiency, and cheapness, the split-log drag or some similar device is destined to come into more and

The King Road Drag

more general use. With the drag properly built and its use well understood, the maintenance of earth and gravel roads become a simple and inexpensive matter. Care should be taken to make the log so light that one man can lift it with ease, as a light drag can be drawn by two medium sized horses and responds more readily to various methods of hitching and the shifting position of the operator than a heavier one. The best material for the drag is a dry cedar log, though elm, walnut, box elder or soft maple are excellent. Oak, hickory or ash are too heavy. The log should be from seven to ten feet long, and from eight to ten inches in diameter. It should be split carefully as near the center as possible and the heaviest and best slab chosen for the front. When the soil is moist, but not sticky, the drag does the best work. As the soil in the field will bake if plowed wet, so the road will bake if the drag is used on it when it is wet. If the roadway is full of holes or badly rutted the drag should be used once when the road is soft and slushy.

The earth road can best be crowned and ditched with a road machine and not with picks and shovels, scoops, and plows. One road machine with a suitable power and operator will do the work of many men with picks and shovels, and in addition will do it better. If the road is composed of fine clay or soil it will sometimes pay to resurface it with soil which has sand or gravel mixed with it. This method is now in successful use in Clarke County, Georgia.

Storm water should be disposed of quickly before it has had time to penetrate deeply into the surface of the road a crown or slope from the center road. This can be done by giving the to the sides. For an earth road which is 24 feet wide the center should be not less than 6 inches nor more than 12 inches higher than the outer edges of the shoulder. The narrow road which is high in the middle will become rutted almost as quickly as one which is too flat, for the reason that

on a narrow road all the traffic is forced to use a narrow strip. Shoulders are often formed on both sides of the center, which prevents storm water from flowing into the side ditches, retaining it in the ruts and softening the roadway. These ruts and shoulders can be entirely eliminated with the road machine or split-log drag.

The width of the earth road will depend on the traffic. As a rule, 25 or 30 feet from ditch to ditch is sufficient if the road is properly crowned. Ordinarily the only ditches needed are those made with the road machine which are wide and shallow. Deep narrow ditches wash rapidly, especially on steep slopes. The earth road should not be loosened, dug up, or plowed up any more than is absolutely necessary. It should be gradually raised, not lowered; hardened, not softened.

GOLD IN GRAVEL

When I first came to Ramsey County, North Dakota, I was very favorably impressed with the fertility of the soil here, and the vast fields of waving grain tempted me to seek "fortune" here. But I observed that here and

there were small knolls that received the same tillage and seed year after year as the rest of the field, and never netted a profit but stole from the returns of the fertile acres. Being a renter I found this spring that I had one of these knolls to farm. I pretended that I was going to follow the old custom, plowing and dragging this knoll when I plowed and dragged the field for wheat. But when I came with the drill I left it out and dragged it again when the wheat was dragged. On the 25th of May I disced this knoll shallow but thoroughly and dragged it down smooth, after which I seeded white beans with a drill 30 inches apart, using 40 pounds to the acre. When up they were dragged lightly, cultivated twice in the early part of the growing season and were then left to themselves, as I did not have more time to "waste" on them. When the leaves had turned yellow I took my family out with me, and we soon had them pulled and laid in windrows. When dry I put them in five-foot stacks (roots toward the center) and left them thus until steady frost. On a sunny day I placed them on a swept frozen road and threshed them out with four horses hitched to a disc harrow, after which I cleaned them with a fanning mill which left them almost ready for market (only a few being discolored). They yielded at the rate of 10 bushels at \$2.00 per bushel, while

the wheat yielded 12 bushels at 75 cents per bushel. Raising white beans on gravel knolls is like getting money from home.—D. P. Madson, Crary, North Dakota.

A DRYLANDER'S MOST PROFITABLE CROP ON THE PLAINS

I came as a dryland pioneer to these plains in the spring of 1910. I had harvested four crops thus far. Last year it was very dry and we do not irrigate where I live.

This year my most paying crop was from a strip of 8 acres of ground sown to winter wheat of Turkey Red variety.

I shall outline the work done on the soil, the full cost of labor and the results.

The 8 acres of ground were broken on April 6, 1912, by a steam plow. This breaking was immediately followed by plow, disc and harrow. The ground was harrowed at intervals after every shower, and on August 15, 1912, was seeded to winter wheat, 40 pounds of seed being used per acre. After seeding, it was again harrowed. It made a fairly good stand that fall.

This wheat was harvested on July 28, 1913, and when threshed, yielded 28½ bushels per acre. There was no rain in heading and filling time, and but for stored moisture, and cool nights, the grain would have wilted. Spring wheat in the same vicinity made from 3 to 7 bu. per acre.

Below is an itemized account of expenditure and profit:

Plowing 8 acres at \$4 per acre	\$32.00
Seed 40 lbs. per acre for 8 acres	
at 80c per bu.....	4.26
Double discing at \$1 per acre..	8.00
Planking at 25c per acre.....	2.00
Harrowing 4 times at 25c per acre	8.00
Seeding at 40c per acre.....	3.20
Cutting and twine at \$1 per acre	8.00
Threshing of 228 bus. wheat at 6c per bu.....	13.68

Total expense\$79.15

Yield of 8 acres of 28½ bu. per acre, 228 bu.

For this grain I am getting 80c per bu.

My field netted me \$182.40, less \$79.15—\$103.25 clear gain.

I did all the work with my own team with the exception of the plowing. I have allowed excellent wages for myself and team, and yet have a neat little margin of profit in a year so dry that many failed to make wages at all. These facts convince me that winter wheat on summer followed with stored moisture will be one of the safest crops in these parts.—Robert J. Holland, Montana.

RIBBON CANE SYRUP

I have been reading UP-TO-DATE FARMING for two years and like it fine. I got up eight subscribers for it which was a very easy job. My most profitable crop: I ordered one gallon of seed of Texas seeded ribbon cane, a cane that is very profitable syrup cane, not a regular ribbon cane, but a cane that is raised from seed. I planted the seed on 1¼ acres of sandy soil, plowed twice. It grew 10 to 14 feet tall, the greatest cane I ever saw. When the seed got ripe I stripped first, and cut the heads off to save for seed, and made the cane into as good a syrup as I ever tasted. I sold all but one barrel. I sold the syrup at 40 cents per gallon, which netted me \$198.00. Seed \$40. Total \$238. Then planted the stubble to oats which made 47 bushels, which I sold at 40 cents per bushel, or \$8.80, making a total of \$256.80 on 1¼ acres of land for one year. This is the best yield I ever made, though the cane will make up to 600 gallons per acre. The seed cost about \$1.00 per gallon. I make the most out of truck crops. Let all the readers give their experiences. I feel that UP-TO-DATE FARMING is doing a great deal of good and I think all farmers should patronize a real farm paper.—Lon Wilson, Drummond, Okla., Box 55.

The Spirit of Service

WHEN the land is storm-swept, when trains are stalled and roads are blocked, the telephone trouble-hunter with snow shoes and climbers makes his lonely fight to keep the wire highways open.

These men can be trusted to face hardship and danger, because they realize that snow-bound farms, homes and cities must be kept in touch with the world.

This same spirit of service animates the whole Bell telephone system. The linemen show it when they carry the wires across mountains and wilderness. It is found in the girl at the switchboard who sticks to her post despite fire or flood. It inspires the leaders of the telephone forces,

who are finally responsible to the public for good service.

This spirit of service is found in the recent rearrangement of the telephone business to conform with present public policy, without recourse to courts.

The Bell System has grown to be one of the largest corporations in the country, in response to the telephone needs of the public, and must keep up with increasing demands.

However large it may become, this corporation will always be responsive to the needs of the people, because it is animated by the spirit of service. It has shown that men and women, co-operating for a great purpose, may be as good citizens collectively as individually.

Business Methods as Money Savers

By W. Clement Moore

FARMER BLAKE was plainly worried.

"See here, Alice," he said to his wife. "I have just received a bill from Merke, the miller, for a ton of wheat bran bought last April. I am sure I paid that bill."

"We'll look over our papers, John, and see," said his wife, nervously, for she had a horror of unpaid bills.

And look they did. The desk was rifled from top to bottom and papers were strewn over the entire sitting room floor, but all to no avail. The receipt could not be found, and the bill was paid over again. Three months later the missing receipt was found in one of John's vest pockets, and there was another flurry and worry between John and the miller to straighten the matter out.

Well, there's a way to prevent such things.

Just a little bit of system is necessary on the farm as much as in any other line of business. And, as a rule, it is so much easier to do things the right way.

For instance, the filing of bills and receipts may be easily done in two or three very simple ways.

First, you may buy an indexed letter file (like the one shown in the illustration), at almost any stationery store for twenty-five or fifty cents, and it will hold all the bills and receipts you are likely to get in a year, or perhaps two or three.

FIG. 1

The way to file them, of course, is to put all bills received from people by whose name begins with A, as Adams, Archers, Allen, etc., under the index letter A. Those beginning with B, under B, etc.

When your file is full, you may take all of the bills out from each index, a bunch at a time and put them on a large upright file, with a piece of pasteboard on which you have marked the filing letter placed on the top of each bunch as you take them from the file. In this way one file will last many years, or you can label your files on the back (as shown) and get a new file every year or so. With such a system, if a person sends you a bill in 1913 for something which you bought in 1910, you would simply take down the 1910 file and turn to the letter with which his name begins and find the receipt if it had been paid. None of John's trouble there.

Figure 2 shows how the bills may be taken out when the file is full and placed on an upright file, and Fig. 3 shows how to label each file when new ones are bought.

Fig. 2.

Fig. 3.

Another good plan for filing letters, receipts and bills, is one that will cost nothing and can be very neatly arranged by the bright school boy or girl on the farm, your son or daughter—if you cannot spare the time.

Select a box of thin wood or heavy cardboard, about 5x9x12 inches in size.

Fig. 4

Next cut 26 pieces of white cardboard, 5 1/2 by 9 inches each in size, and cut the strip indicated by the dotted line in the drawing A away, leaving an index tab as shown in illustration B. On the next strip leave an index space twice as wide, etc., until the sheet requires no cutting away at

Fig. A.

Fig. B.

Fig. C.

all, then start back at the beginning as you did in B. When finished place them in the cardboard box and you will have a card index file like Figure 4. You can then file your bills and receipts in the box, back of the letter where they belong.

Either of these plans will save a large amount of worry and trouble, and one of them should be adopted at once, if you are not already using a plan as good.

SOIL THAT WILL PRODUCE TREES WILL GIVE BUMPER CROPS

Every day the prices of foodstuffs are mounting. So every day the price of good farm land is soaring.

That is why today shrewd men are reclaiming "stump land." No soil could be richer. The leaves of centuries has fertilized it. Hogs, cattle,

strength to produce crops of record proportions.

Merely burning off the stumps, the brush, the hedge won't do. It won't clear the way for the plow.

Listen to the Department of Agriculture on this subject:

"It is recorded of the ostrich that when frightened it will bury its head in the sand and imagine that it is hid-

The Best Way to Rid the Land of Stumps

sheep have lived on that soil and have enriched it every day. It is practically virgin soil—rich in crop possibilities. That soil has produced towering elms, oaks, cypress. It has the native

den from the outside world because its own eyesight is cut off. It is the same way with the men who cut away and burn the brush and imagine that they have cleared the land because it looks clean. This is generally a mistake. Such land is unillable and from each stump sprouts will start and soon innumerable new bushes will be making headway. In a few years land cleared in this way will be more unsightly and expensive to clear than it was originally."

Within the last few years great improvements have been made in the manufacture of stump-pulling devices. Today, the all-steel triple-power stump puller is pulling stumps at the rate of 50 to 600 a day, with the aid of merely a man and a team.

An Iowa farmer recently interviewed said, "I consider the time and labor wasted from plowing, planting, and cultivating around a lot of stumps in the field in one season amounts to more than the time and labor it takes to pull the stumps. When I cleared every stump my increase of corn the first year more than paid for my machine and the land is worth now \$85 an acre more than it was before I pulled the stumps."

MCDERMOTT'S ALFALFA FIELD

Mr. Frank McDermott, living three miles northwest of Clinton, Ia., seeded five acres of alfalfa in August, 1912. The ground was summer fallowed throughout the season, the weeds being kept down and a good mulch retained. Four or five tons of finely ground limestone per acre were distributed and worked into the surface. At seeding time early in August the ground was thoroughly inoculated with dirt from a sweet clover patch. After the ground was frozen in the winter the field was covered with a rather thick dressing of straw manure. In the spring the straw was raked up and hauled off so that it would not be raked up with the first crop of hay. This five-acre field produced twenty-two tons of hay from the first two cuttings during the season of 1913. The third crop, which would have made at least one ton per acre, was left on the ground. When asked why he did not cut it, Mr. McDermott said that he had so much hay now that he didn't care to bother with it, and thought that he would leave the entire crop on the ground for winter protection.

A Fair Warning

The preacher visited a country home, and, as usual, a young rooster was served for dinner. Some days later he was seen coming again, when the little boy of the house hurried out and began to drive the chickens away, urging them with the warning, "Yonder comes the feller that eat your brother!"

The Marlin "Pump" Action
.22 Cal. REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards.

No. 20 rifle with plain finish, 15 or 25 shots, \$11.50.
 No. 29 rifle, \$9.25.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your head and allows quick, accurate repeat shots. With simple take-down construction, removable action parts,—least parts of any .22—it is the quickest and easiest to clean. Just the gun you want! Ask any gun dealer.

The 128-page Marlin catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

The Marlin Firearms Co.
 104 Willow Street New Haven, Conn.

Without change of mechanism it handles .22 short, long or long-rifle cartridges perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

Wonderful GALVANIZED Steel Roofing OFFER

Fire, Water and Lightning Resistant. Practically Indestructible.

A fortunate purchase enabled us to secure a limited amount of brand new, high grade corrugated iron and galvanized steel roofing, some of which we are offering, while it lasts, for as low as \$1.25 a square of 100 sq. ft., f.o.b. cars, Chicago. This is only one example of how much we can save you on all your roofing purchases. Never before in the history of the roofing business has such a remarkable money-saving roofing offer been made. It doesn't make a bit of difference what kind or make of roofing you have in mind to buy—corrugated, iron, galvanized steel or ready roofing, rubber surfaced, pebble, marble, flint or gravel coated—we can supply your every need with just the kind you want. Write today for—

\$1.25 Per 100 Sq. Ft. Buys Best STEEL ROOFING

FREIGHT-PREPAID PRICES

and let us prove that we can save you big money on every kind of Roofing, Siding and Ceiling. We can furnish you the material necessary for re-roofing your house, barn, granary, church, residence, garage or poultry house. We can also furnish you the siding, conductor, church, eaves trough, and everything needed. METAL ROOFINGS ARE BEST and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof; cooler in summer, warmer in winter; do not taint rain water; with ordinary care will last a lifetime.

Just another example of how hard we've smashed roofing prices this season. Never before and probably never again will you be able to buy such roofing at this price.

We Save You Money

Now is the time to send in your order for this roofing—don't delay it a single day. Even if you do not intend to use it for several months to come, send your order in now with a reasonable deposit which will protect you in your purchase, and the material will be shipped when you are ready to use it. Metal Roofings are best and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof; cooler in summer, warmer in winter; won't taint water; with ordinary care lasts a lifetime.

Chicago House Wrecking Co.

Prominently known everywhere to the public for 20 years as the great "Price Wreckers" and now owned by the Harris Bros. Co., have decided that their best interests require that the name of the principal owners of the company be more prominently brought to the public's notice. There is no change in our business, except that the four Harris Bros. will, in the future, advertise and sell their goods, under the name of the Harris Bros. Company, instead of the Chicago House Wrecking Co.

The First Rule of Success

(First Prize Article)

AFTER nearly fifty years on the farm, in handling all kinds of crops and animals—if I were called to lay down a rule of action which would contribute most to a farmer's success, it would refer to a matter I seldom see mentioned in literature relating to agriculture.

My iron-clad rule would be that every plant and animal should be protected from stunting or having its growth checked.

This is a basic matter and is too often overlooked. Plants as well as animals never fully recover from a setback got during their growing period.

My neighbor had a bunch of pigs—two were sold to a careful old lady—the others were allowed to run in a dry pasture where they could barely subsist, and got water from a stagnant pool. When it was time to put them up to fatten for meat for Christmas, they ate like hogs but made flesh slow. At butchering time the two raised by the careful lady were killed with them. The two weighed out 40 per cent. more meat and lard than any two of those raised in the pasture. These pigs were all of the same litter.

Another neighbor takes pride in the production of earliest plants. January weather is against plant life and hot beds need special care that tender plants may live. Even an hour's exposure at times will stunt them and in a cold spell to be shut up 12 hours too long from fresh air will result the same. So, I take the ground it is a needless risk. To avoid this and give my plants a more favorable chance, I plant later when conditions are better and keep my plants growing from the time the come up.

The results are that at transplanting time my plants are as large as his and more thrifty.

Also, my neighbor sets plants in the field very early and takes chances on frost or set back by cold. I encourage mine in the hot bed and wait for the ground to get warm and conditions right for them to flourish in meantime weaning them gently from the hot bed by gradual exposure—take up carefully with some hot bed soil attached to the roots and place them in the field so they don't know they have been moved and there is no lull in their vigorous growth.

The net results are seen in the crop—mine equally as early and ahead in quantity and quality.

We see it clearly in poultry and complaint is made they don't lay. The place to find the reason is in the treatment they had in their growing period—maybe tormented by mites, maybe exposed to foul air at their roost—maybe without water for hours on hot days. If stunted by any such means they will never be vigorous layers.

Cows of the same blood vary greatly in their yield of milk—full knowledge could trace the cause back to an over heating or brutal handling in the heiferhood of the delinquent one.

When buying a horse the first thing you try to learn is if it has ever been hurt or abused or strained or over-worked—if so, you don't expect much of it—the same stunt discount.

In the corn field every year we see the replant (2 weeks latest) catch up with the main crop and sustained observation of it through the season reveals the fact that it is nearly always the best corn. It wasn't exposed to the chill of a near frost—but came steady and vigorous from the sprout.

There is certain care and attention to the wants and requirements of every plant and animal that will increase their efficiency and value if given and be detrimental if withheld or neglect-

ed. Any careful observer of animal or plant life can see every day something that can be done to supply its needs, or change its environments in a way to encourage growth, round out the fullness of its life and increase its producing capacity. It's our failure to give proper attention to these things which very often fall short of our expectations.

Of course, we have no control over drouths or floods or windstorms—and our chance against pest and malignant disease is limited—in short the natural forces are too strong for us. But if we do all we can before and after we will realize results from our efforts.—George L. Thoern, Box 24, Handley, Tex.

Ten Acres of Poor Ground and Prosperity

(Second Prize Article)

When we came to our present home from another state in the spring of 1905, the question of the most profitable crop was among the first to be considered. We were four miles from a splendid market with a farm of ten acres of soil that had been run down by poor management until it would not produce a good crop of anything.

Having had just a little experience in berry culture, I began to inquire of the farmers and dealers, as to the prices, supply and demand.

The information obtained was that the market was well supplied with strawberries and usually with black raspberries, but that there never was enough blackberries or red raspberries. I wish to call especial attention to this, for I have learned that there are many markets throughout the country in the same condition, which affords opportunities to build up a good paying business on a very small acreage.

Our soil is a heavy clay and not very well adapted to berry culture, but we began in a small way, determined if possible to grow the crop most in demand. We studied all the information we could get but most of all we studied the crops as they grow here on our soil. We increased our plantings as we learned to handle them successfully.

Last year our berries were all somewhat damaged by a heavy frost on June 6th, yet from 1 1/4 acres of blackberries, we sold 159 bushels and 12

Special Prize Contest

WHAT DID YOU DO IN 1913?

Announcement By the Country Contributors Editor

What is your record for the year 1913? How much money did you make or lose? Are you worth more today, cash value, than you were one year ago today?

The editors just handed me a copy of an editorial to be published in this issue on "Put Your Farm on a Business Basis." I ventured the assertion that a goodly number of farmers are doing so.

"Prove it," said the editors.

So I shall.

I want you to send in your statement of last year's operations. Make it as complete as you can. For the best statement we shall pay a special prize of \$5; second best, \$3; third best, \$2.

It doesn't matter whether you made much or little, or lost money. The amount of the figures will not count. It is the completeness of the statement we want. Where do you stand, financially? What has your farm paid, as a business? Tell us and prove your statements by your figures. Give us the facts. It will help you and others.

The Country Contributors Editor.

quarts. The first pickings were sold at \$4.80 per bu. Then some at \$3.50, but the bulk of the crop was sold at \$3.20. The gross receipts from the 1 1/4 acres were \$537.75. The total cash expense of harvesting and marketing the crop was \$121.25, which leaves a net income of \$416.50. From one acre of red raspberries we sold 56 bushels and 2 quarts. These were nearly all sold for 16c per qt. or \$5.10 per bu. The returns from the acre was \$279.80. The cash expense \$42.70, leaving a net income of \$273.10. From

Three Years for \$1
OR A CLUB OF 3
One Year Each \$1

Up-to-Date Farming, Indianapolis, Ind

the 2 1/4 acres our net income was \$653.60. This is for berries actually sold as I have made no accounts of those used on our own table or canned.

On account of the scarcity of these fruits the prices here are much higher than for strawberries, and were higher than usual last season, which was our best year's record. However, we look forward to other years as good or better, now that we have learned to produce successful crops of what our market particularly needs.

There are many places where this record can be duplicated or improved, and this is written to encourage others to try the same ideas, for the writer thinks one good way to improve our marketing system is to produce all the goods possible so close to the consumer that the middlemen cannot get in between; that it is oftentimes better to make a special effort to produce what the market demands, than to grow crops that, while they may be more easily grown, must go over the railroad and through dealers' hands.

It requires a lot of study and hard work to produce good crops where others have failed. One must know what to do, and above all, have the ability to get work done when it should be done, not a few days or weeks later.

—B. V. Egbert, Sharon, Pa.

WHAT A GOOD GATE IS AND MEANS (Third Prize)

I was raised on a farm and have always wondered why most farm homes have so few conveniences about the place, since it is apparent to every one that little things sometimes go a long way towards facilitating the routine of duties that must be performed each day. A door or gate that requires both hands to open and close is not convenient, yet I have seen such things and wondered if some people stopped to think what a waste of time such things involved. I could speak of many. I will mention one in particular that strikes me most of all. It is the farm gate. The average gate can not be opened by a child but requires a strong person to drag the gate open, then it must be dragged back. If this was done but once or twice a day, it would not be so bad, but it often occurs that a gate must be passed through several times a day and the same back-breaking process gone through each time. I leased a farm in Oregon, and when I moved to it, I found only one gate on the place and that one could not be opened by any one except a strong man. I soon converted that gate into one that could be opened by a child. I hung the gate to a large fir tree in such a way that a child could approach it, raise the latch with one finger, push the gate open, when turned loose, the gate would close by its own weight, also the latch would drop into its place and the gate became secure.

We will see how much I gained by properly adjusting this one gate. We will say that at least ten trips must be made through this gate each day, and that in order to open it fifty pounds weight must be carried twelve feet. Then to open and close, it becomes necessary to lift and carry fifty pounds a distance of twenty-four feet, or, in the ten openings and closings, 500 pounds must be carried a distance of 120 feet. This must be gone through day after day. Suppose this work is done by a hired man as it often is. How much does it cost per year to have this work done. Figure it out for yourself, and this same principle obtains in almost everything on the farm. I know many people who are badly handicapped on account of a lack of conveniences. I have often wondered how some people could succeed with everything about the place so unhandy that very much time is lost each day that could be used for a better purpose of there were more conveniences about the place.—John B. Polk, Healing Springs, Ark.

\$100
Puts It On Your Farm

THE CHATHAM
Grain Grader and Cleaner

Handles 70 Kinds of Seed Grain and Grass Seed
From Wheat, it takes Wild Oats, Tame Oats, Cockle, Rye and Spout. Has special
Cleans the dirtiest Flax. Has special
knocker and skimmer which prevents clog-
ging. (Other machines choke up.)
Takes Dodder, Barn Yard Grass and Foxtail
out of Alfalfa and Millet "sifts as a whistle."
Takes Buckhorn from Clover.
Sorts Corn for Drop Planter.
Famous BEAN MILL. Handles all varieties,
takes out the SPLITS, Clay, Straw, etc.
Handles Peas as well as any Grain or Grass
Seed. Removes foul weed seed and all
shrunk, cracked and sickly grains. Takes
out all dirt, dust and chaff. It is also a bulky
chaffer. Handles 60 bushels per hour. Gas
power or hand power. Easiest running mill.

For \$100, I Clean and Grade Your Seed Grain

You can't afford to plant common Seed (and take chances on a poor crop, when I am offering to scientifically clean and grade every bushel of your Seed Grain for this spring's planting for one paltry dollar.

Here's my proposition, and if you are a smart man you will write me before sunrise tomorrow: Send me one dollar and I will ship you, **FREIGHT PAID by MYSELF**, this improved 1914 Chatham Grain Grader and Cleaner, with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the \$1. until next October. And by October YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST IN INCREASED CROPS. Then you'll have it to work FREE for you the rest of your life.

Your Dollar Returned
I only want the dollar as evidence of good faith—to protect myself from mischievous boys. If after 30 days' hard test, you don't want my "Chatham," send it back at my expense and I will return the dollar.

A "Made-to-Order" Machine
Every "Chatham" is practically a made-to-order machine, for I send you the exact and proper Screens, Riddles, Hurdles and Sieves to grade and clean every Grain and Grass Seed grown in your locality. That's the secret of my success. I would not be the leading maker of Graders and Cleaners if I had tried to make my equipment fit ten million farms. What would you think of a clothing maker whose suits were all one size? Wouldn't it be a miracle if he gave you a fit. Yet

all makers of Graders and Cleaners, except me, send the same equipment, whether you live in Maine, Ohio or Oregon. They wouldn't do that, if they had my 41 years' experience.

Extra Screens Free
I use, all together, 81 Screens and Sieves. It usually requires 15 to 17 for the average farm. These I select from the 81. After 41 years in the business, I am pretty sure to pick the exact equipment needed on your farm. If I shouldn't, just drop me a line and I'll send your additional requirements. There will be no charge for this.

Samples Graded Free
Maybe you have some Seed Grain that you can't clean or grade or separate. Send me a sample. I will purify it and tell you how you can do it cheaply. No charge for this.

Seed Corn Sorted
My big Corn Sorting Attachment, invented 2 years ago, is a great success. Twelve thousand farmers and many leading Agricultural Colleges are using it. It is the only machine I know of which scientifically sorts seed corn for drop planters.

New Book Ready
Send me no money now—just a Postal, for the finest, most complete Book on Seed Selection I've ever written. After the Book comes, write me what size machine you want and I'll ship it, freight prepaid, on receipt of \$1.00. Then clean and grade all your Seed Grain. If you write today, you get my Book by return mail. Address nearest office.

Detroit Kansas City Minneapolis

Now the Last Step

In Reo the Fifth

We take this year what seems to be the last step in quality, beauty, equipment and price.

The chassis embodies the best Mr. Olds knows after 25 years of car building. A better-built car cannot be conceived.

The body is the new-style streamline body, the coming vogue. More beautiful lines are unthinkable.

The upholstery is deep and rich. The finish is perfect. The equipment includes all that motorists desire.

And now comes a new price—a record price on a car of this class and quality.

Price \$220 Less

The price this year is \$220 less than last year's model, similarly

Reo the Fifth

Summer Series

Now \$1,175 Equipped

equipped. That saving is mainly due to this: All the costly machinery for building this chassis has been charged against previous output. That cost is all wiped out. From this time on, so long as we build this chassis, this big item is omitted from our cost.

No other factory in America could offer you a price of \$1,175 on a car built like Reo the Fifth.

A Costly Car

Reo the Fifth is built in a most unusual way. The steel is made to formula, and each lot is analyzed twice. All driving parts are given 50 per cent over-capacity. Gears are tested for 75,000 pounds per tooth. Engines are given five long, radical tests.

There are 15 roller bearings, 190

drop forgings. Each car is built slowly and carefully. Close-fitting parts are ground over and over. Tests and inspections are carried to extremes.

We could save at least \$200 in the hidden parts if we built you a shorter-lived car. But you get here low cost of upkeep. You get freedom from trouble. You get a car built to run for years as well as it runs when new.

Reo the Fifth is built for men who want the utmost in an honest car. For men who buy cars to keep. For men who want safety and staunchness. It is the car of super-strength.

A thousand dealers sell Reo the Fifth. Ask for our catalog and we'll direct you to the nearest showroom.

DE LAVAL Cream Separator

the most important
machine used on
the farm

SOME BUYERS OF CREAM SEP-
 arators do not stop to think why
 their purchase of the best cream sep-
 arator is of greater importance than
 the purchase of any other imple-
 ment or machine of any kind used
 on the farm, or, for that matter,
 anywhere else.

NEARLY EVERY PIECE OF
 farm machinery is only used a
 few weeks during the year, if that
 long, and when it is used simply
 saves time or labor over some other

way, with compara-
 tively little differ-
 ence between
 makes of such ma-
 chines except in
 design or size or
 possibly that one
 is better made
 than another and
 so lasts longer and
 probably costs
 more proportion-
 ately.

THE FACTS ARE VERY DIFFER-
 ent in the case of the cream sep-
 arator, which is used twice a day
 every day in the year, and very dif-
 ferent as between the De Laval and
 other cream separators because the
 use of any other separator or cream-
 ing system involves not only the
 saving in time and labor a De Laval
 machine would effect, but an actual
 waste in quantity and quality of prod-
 uct a De Laval machine would save.

The Cream Separator the most wasteful or most profitable

THIS IS THE VERY GREAT
 difference that makes the cream
 separator the most important of farm
 machines, the most wasteful or the
 most profitable, because used so often
 and involving a waste or a saving
 every time it is used. This is the
 reason why there are more De Laval
 separators in use than any other
 kind of farm or dairy machines the
 world over, and more than all the
 other makes of cream separators
 combined.

NO MATTER WHETHER YOU
 have yet to buy a separator or
 are using an inferior machine, you
 must be interested in what a De
 Laval—not a 10, 20 or 30-year-old
 one, but a De Laval machine today—
 would do for you, and that every
 De Laval local agent will be glad
 to make plain to you by the demon-
 stration of a machine itself.

IF YOU DON'T KNOW THE
 nearest De Laval Agent, simply
 write the nearest main office as below.

DAIRY NOTES

(By A. C. McPherson)

There is such a close connection be-
 tween the treatment of the cow and
 the quantity and quality of her milk
 products that the dairyman cannot be
 too careful in her management. A
 prominent dairyman says: "We know
 of many instances where the best of
 cows were used and good feeding prac-
 ticed, and yet results fell far short of
 what reasonably might have been ex-
 pected, simply because animals did not
 receive kindly treatment which is so
 essential if they are to be kept well and
 give milk a long time." The herd
 should be moved about slowly. Never
 hurry a cow, or strike her nor speak
 harshly. A quiet voice and caressing
 touch is potent for best results. Con-
 tentment and good feed makes for
 quantity and quality with the cow's
 products.

A farmer's wife related that she had
 the evening before broken her milking
 stool on a "pesky" cow. Some of the
 listeners were shocked, others laughed
 and some sympathized. The latter had
 had experiences of their own. As a
 rule unruly cows are the result of
 wrong treatment in and from calfhood.
 The dairy calf should be handled daily
 and be early broke to the halter.

The character of the cow is very
 much the result of calf management.
 No one who has no control of himself
 has any business with them. Give the
 calves a name from the first. They
 will be easily managed afterwards
 when older.

When cows are filing into the barn,
 if Cherry goes into Bess' stall to steal
 a mouthful of clover or bran, simply
 speak her name and her attention will
 be attracted. She will forget her er-
 rand and go to her own stall.

A prominent dairyman said he treat-
 ed each of his cows as if she were a
 lady. This, we think, was an extreme
 statement, but firmness and kindness
 must go together when handling dairy
 cows.

The cow is a nervous animal and
 treatment that excites reacts upon the
 nervous system and lessens the milk
 flow.

The best dairymen keep no dogs.

There are two types of dairymen.
 One uses the greatest care in the man-
 agement of his herd; no hard words,
 no clubs, no dog is allowed on the
 premises. All is quiet, each cow knows
 her name, and usually obeys her mas-
 ter's call; everything moves along like
 clockwork; order prevails in all parts.

Here is another type: His cows are
 brought in from pasture on a run by a
 dog and arrive heated and excited at
 the milking place, there to receive
 harsh words and often blows to bring
 them to a proper state of submission to
 be milked. Nature outwits every time
 and the flow will not be normal under
 such treatment.

TRAINING VS. BREAKING COLTS.

It is time now to begin training the
 colt, "breaking" it we used to call the
 process. The word was well chosen,
 too, in many cases. We are learning
 however, that we want our colts
 trained, not broken.

Every colt should be handled from
 the first, and taught the meaning of
 commands. Learn them to lead, to
 stop at the word, "whoa," to go ahead
 at the word, "get-up," to trot when
 you say "come along," to "back" and
 to "gee" and "haw." When three
 months old, rig up a little harness for
 it, and make it "bride-wise." To in-
 duce a colt to take the bit, hold a lump
 of sagan on top of the bit, and it will
 take it readily. Sugar is a great help
 in catching a colt. Take off your hat
 put a lump of sugar in it, and put it
 over the nose of the colt. Do this often
 and whenever you approach the colt
 with your hat in your hand, have the
 lump of sugar in it. Never deceive it,
 and then, with your hat and a sugar
 lump you can catch the colt anywhere,
 any time.

Learn the colt to drive with lines
 when a year old. You can do it, with
 a little patience and a lot of kindness.
 When two years old, hitch it up dou-
 ble with its dam, or a gentle horse, and
 let it learn a little pulling, but do not
 tire it. Never put a young colt to a
 strain. Wait until it is fully grown
 before you give it any heavy work.

Begin early, and keep at it, and
 you will have a horse that is well
 trained, hence will never need to be
 broken.

NEVER TROUBLED BY CHOLERA

I notice that many remedies for hog
 cholera are advertised in the farm
 journals. I bought a farm in southern
 Iowa in 1890 and have since then
 raised and sold hogs to the amount of
 not far from \$850 yearly without loss
 of any from the cholera. I mix salt
 and wood ashes in the proportion of
 one quart of salt to one-half bushel
 of ashes and place it where they have
 access to it most of the time and all
 the time after I commence feeding for
 market until they are sold. I do not
 know that it would be a certain rem-
 edy after the disease gets into the herd,
 but from my experience I consider it
 a preventative.—S. B.

LIVE STOCK NOTES

Muddy weather; keep the horses'
 feet and fetlocks clean.

If you want lambs of high quality,
 keep them growing rapidly.

Clover and alfalfa hay is excellent
 for the brood sow at this period.

Wheat bran and oats with clover hay
 is the right feed for the ewes at this
 time.

Running the Incubator Successfully

By Archie E. Vandervort, Sidney Center, N. Y.

WHILE there are thousands of incubators in use, no doubt there are many who are running or going to operate an incubator for the first time this spring. Many of such will be agreeably surprised, if they have a good machine and run it rightly, to find how easy it is to hatch chickens with incubators. As a general thing the manufacturer's directions are complete and should be carried out, instead of experimenting on one's own hook. If the operator is a novice this is especially so. Under ordinary conditions the house cellar is about the best location for an incubator, providing the air is pure and well ventilated. We are liable to find the temperature less variable in a cellar. It is important to have as uniform a temperature as possible, even if the regulator is capable of overcoming evaporation and keeping an even temperature in the egg chamber, as in the case of hot water machines, a larger volume of heat than needed causes too rapid evaporation.

After setting up the machine run it two or three days to get it thoroughly regulated before putting in the eggs. After the eggs are placed in the trays it is well to keep a lookout to see that the temperature does not run a little high, as it sometimes does, owing to the extra body to hold heat. I prefer to set the regulator a degree low and raise the heat to 103 degrees, after the disk has been raised. The thermometer should be placed in a location as directed by the manufacturer, as machines differ, but where the bulb is in direct contact with the egg, as in some makes, be very careful that the egg is a fertile one.

After the eggs have been in the machine for about three days they should be turned both morning and night. This develops the embryo, and causes more normal growth, as well as giving all parts of the egg an equal share of the heat, as the lower part of the eggs is a little cooler than the upper.

I make it a practice to air them a little longer each time as the hatch advances until after they have run two

weeks. I then leave the trays out until the eggs feel comparatively cool to the hand, but still feel warm when held against the cheek. Every effort should be made to have each egg receive the same average heat, and it is consequently well if the eggs are shifted gradually from one part of the tray to the other. The trays should also be shifted from side to side at one turning and end for end the next, as no machine keeps an absolutely uniform temperature in all parts.

Care should be taken that the air where the incubator is operated is fresh. With most modern hot-air machines, being heated by a constant flow of warm air, little or no ventilation is required, unless at the latter part of the hatch, and then care should be taken that the ventilators are closed before the chicks come out, thus preventing the escape of moisture.

It is needless to say that the lamps should be trimmed and filled every day, night being the preferable time, as the fresh flame will hold more heat during the cold of the night and is consequently better adapted to overcome nightly dropping of temperature, if such occurs. Never start the hatch with an old wick, as you are sure to forget it, and sometime you will awake to find your wick burned out and your eggs cold. I find it a good plan to not trim the wick with shears, as the flame will often run up after you leave it. I rub off the wick with a match. An average temperature, varying from 102½ to 103 degrees, seems to give the most satisfactory results, and is perfectly satisfactory throughout the hatch. But equally good results can be obtained in many cases if run a degree lower the first week, say 102 to 102½, and average up, running a little higher the third week. Still in numerous trials I have never been able to note any marked difference. The main thing is to maintain a temperature that will get the chicks coming freely on the twentieth day and practically through on the twenty-first. After setting your regulator it is always best to leave it alone, for if you keep meddling with it you will find it a good deal like "monkeying" with the band wagon, and the band won't play. Overcome the surplus heat with your lamp flame by turning down and carrying no more than is needed beyond a fair allowance for sudden changes, and the regulator will take care of that.

An important factor in getting good hatches is to thoroughly test out the infertile eggs. Excellent egg testers, with instructions for use, are furnished with most machines. These testers can be placed on an ordinary lamp and the eggs tested at night when the room is dark. I would advise the novice to test his first lot of eggs before the eighth or ninth day, when he will have no difficulty in telling a fertile egg from an infertile one, as the germs are plainly visible. A good, strong germ has the appearance of a spider in the egg. A blood circle adhering to the shell denotes a dead germ. A perfectly clear, as well as a cloudy egg is infertile and should be removed. These discarded eggs may be boiled and fed to the young chicks or may be used for cooking purposes. I have found it a good plan to retest the eggs again on the fourteenth day. At this time the live germs will be easily distinguished as, with the exception of the air space, the eggs will be nearly opaque.

I keep turning the eggs until it is about time for them to hatch, when the machine is left closed until the hatching is complete. When the hatching is done the unhatched eggs and empty shells are removed with the trays and the chickens left in the incubator over night. The next morning they are ready for the brooder, which should have been previously heated to the proper temperature. The incubator is then thoroughly cleaned and

disinfected and made ready for the next hatch.

Do not sprinkle the eggs at hatching time unless the lining of the egg is so tough that the chicks can not get free, as it runs the temperature way down and consequently reduces the vitality of the chicks at the very time they need it the most. If the hatch drags and the eggs are from vigorous stock look out for the thermometer. It may be a little off, and so run the next hatch at a higher temperature. Or get a new and correct thermometer. A uniform heat that will get the chicks out on time is all that is needed. Where too much moisture is supplied chicks will sometimes overgrow, and if not enough will not be able to free themselves. When you purchase an incubator select one of a make that has a reputation as a good hatcher. Fill it with fresh, strongly fertilized eggs, take pains in running it and at the end of twenty-one days you will be amply repaid with a basketful of strong, healthy chicks.

Garden and Orchard

PLANTING AND CULTIVATING BLACK AND RASPBERRIES

By B. V. Egbert

Our berries are planted 8 feet by 3 feet, with a row of 7-foot posts set about twenty feet apart in each berry row, with two wires stretched, one about three feet and the other about five feet above the ground. The canes are tied to these wires so that no canes can lop out across the row, and the cultivation is kept up throughout the picking season. We allow only six canes to a hill in the red raspberries and four or five in the blackberries and all new shoots are removed between hills.

The most important requirements for large yields are, first, a thoroughly well-drained soil and, second, thorough cultivation throughout the season.

If the cultivation is stopped when the picking begins the soil dries out very rapidly and there is an excessive strain on the vitality of the plant, which not only cuts down the crop decidedly, but also shortens the life of the plants. The thinning is also important, for just as certainly as we get more corn from four stalks in a hill than we would from eight or ten, we will get more berries from five or six canes than we can from twice that number. I am surprised that more farmers do not grow these berries for their own use. One row each of red raspberries, black caps, and blackberries, 100 feet long, producing as ours do, would provide fresh berries for the average family table every day for two months and an abundant supply for canning. I know that the berries ripen in harvest and that a small patch is likely to be neglected in the rush of the work, and yet the general farmer could clean up a small patch early in the spring and mulch it heavily with straw, marsh hay or any rough material, putting on enough to smother out the weeds.

The cultivation would then be done for the entire season and one could surely find time to take out the surplus canes.

FROM A GARDENER'S NOTEBOOK

Beans—snap, pole, lima, all varieties and classes—are about the cheapest and best food for the family that can be grown in the garden. Plant plenty of them.

Lettuce is easily transplanted. Have plants ready to go in the ground as soon as the garden can be plowed.

A top dressing of rich stable manure along the onion rows will push the green onions along rapidly.

The Spanish and Italian varieties of onions can be sown early and transplanted successfully. The American varieties do not transplant well. Sow them later, in open ground.

If you want good results in the garden use plentifully of manure and fertilizer.

Take the hoes, rakes, wheel hoes, garden drill and other garden tools into the workshop, fix them all up in prime working order and be ready for rapid and easy work when the work time comes.

Like Heaven

"How do you like the new place where you work?" asked the friend of the farm laborer who had changed places.
"It is just like heaven," was the reply.
"How is that?"
"There is no night there."

True Words Spoken in Seriousness

"The governor is a tender-hearted man," said the condemned murderer's counsel. "It looks as if you had a good chance for a pardon."
"I'll be hanged if it doesn't look that way," hopefully responded the prisoner.

TREES & SEEDS THAT GROW IN YOUR STATE

Catalpa Speciosa Seedlings The kind that are planted for posts. I raise them by the million. Here are my prices: 4 to 8 inch, \$1.25 per 1000, 8 to 12 inch, \$2.00 per 1000; 12 to 18 inch, \$3.50 per 1000; 18 to 24 inch, \$4.00 per 1000. I pay freight on \$10 Tree Orders. Full line of Fruit and Ornamental Trees, Forest Tree Seedlings, Small Fruits, Grape Vines, Flowering Shrubs and Roses. Buy With Your Neighbors—Save Fence Cost

Write us for special low prices on co-operative buying of Empire Fences. Get your neighbors to join you in ordering. We will quote you lowest wholesale factory prices. Joseph Stangle, Constantine, Mich., writes: "Empire fence can't be beat. My fence, put up seven years ago, as good as the day I got it. Expect neighbors to go in with me to make up big orders." Ask for FREE BOOK of facts about fence quality: illustrates and describes

No. 9 Empire and Empire, Jr. Open Hearth Steel, Big Wires, Heavily Galvanized

This book will show you why the No. 9 Empire and the Empire, Jr., made of Open Hearth Steel, great big wires, galvanized as a wire fence should be galvanized, will outlast any soft Bessemer steel fence ever made. It illustrates our big wire—the strong Empire knot that holds good as long as the fence. It will show you why Empire fences are proof against any and all kinds of weather, rust, rot—proof against the hardest use—why they do not sag, why they stay hog-tight and cat-

tle tight as long as they are in use—why they are by far the least expensive fences to buy in the long run.

Farmers, everywhere, are investigating fence quality. Users insist on knowing the quality underneath, just as they know how to judge a horse. You cannot fool an experienced buyer with an old horse doped up—polished up—to look like a good horse. You cannot fool an experienced buyer with a poor fence doped up to look like a good fence.

Bond Steel Post Co., 61 Maumee St., Adrian, Mich.

Horses, Mules & Cows Should be CLIPPED

They are healthier and give better service. When the heavy coat that holds the wet sweat and dirt is removed, they are more easily kept clean, look better, get more good from their feed and are better in every way. Horses and mules take on new life and energy when clipped and naturally work better. Clipping the flanks and udders of cows prevents the dropping of filth into the milk. The best and most generally used clipper is the Stewart Ball-Bearing Clipping Machine, the only machine that can be used on horses, mules and cows without change. It turns easier, clips faster and closer and stays sharp longer than any other. Gears are all file hard and cut from solid steel bar. They are enclosed, protected and run in oil; little friction, little wear. Has six feet of new style easy running flexible shaft and the celebrated Stewart single tension clipping head, highest grade.

It's Easy Action, High Speed

Price \$7.50 from your dealer or send us \$2.00 and we will ship C. O. D. for balance. Your money and transportation charges returned if you are not satisfied.

Get More Money for your wool. You not only shear and disfigure your sheep but lose a dollar on every six you shear the old way. Figure how much more money you'll get if you use a Stewart Shearing Machine. It's the most perfect hand-operated shearing machine ever devised. Has ball bearings in every part where friction or wear occurs. Has a ball bearing shearing head of latest improved Stewart pattern. Price complete, including 4 combs and 4 cutters of the celebrated Stewart quality is \$11.50. Get one from your dealer, or send \$2.00 and we will ship C. O. D. for balance. Money back if not satisfied.

How About Your Church?

Dear Sisters, Brothers and Pastors:
The country church, (and this also includes churches in small towns and villages) has lost, in the main, its power to influence the community in which it exists. If the power is not lost, it at least is not exercised. The church does not attract even its members as it should, let alone those whose names are not found on its books.

Is the fault in the minister? Not always, or often. All the ministers are not failures. Is it, then, in the indifference of the non-members? In some cases it may be, but the great majority of us are alike and a power or an influence that will move many of us will move most of us. No, the trouble is not on the outside.

Here is a letter which puts an accusing finger on one of the diseased spots of our church life. Read it thoughtfully:

The Ladies' Aid Society met one day in every week in the last church where I became a member. The people were cordial enough on the day that we met to sew and have luncheon together, but very few of them would remember me if they met me elsewhere, even at the Sunday morning services, which my husband and I attended regularly. If I spoke to them outside of these once-a-week meetings they would look at me in amazement and wonder. It is needless to say that my letter did not re-

main in that church longer than three years. At the end of that time I was frozen through and through, and have not been able to find a church since that is warm enough to thaw me out.

What churches need is more love for each other among its members, and more love toward humanity. Where we love, we will act lovingly. If we truly love Christ we will truly and sincerely love men and women, no matter how poorly they are dressed, or how ignorant they may be, or how inelegantly they may express themselves. The church has lost its power because it has lost its love for humanity.

Not to overlook anything, isn't it a fact that bad roads have a bad effect on the church? People enjoy a drive over a good road on a Sunday morning. Neither horses or men like to travel a bad road, and that gives an excuse—no, a real reason for not driving to church. And to miss a few Sundays leads to a habit of missing. It surely does. I've seen it so again and again. Good roads will help church going. Good roads is good religion. Doesn't St. Paul warn against placing stumbling blocks in fellowman's way? And isn't a bad, muddy road a real stumbling block?

AUNT SOPHIA.

THE BABY

By Pearl Chenoweth

The dangers of summer, which may prove harmful to your baby, may be

in a large measure warded off by a careful diet. Giving baby "a taste of this and a little of that" is inviting danger. The stomach of a child under one year is prepared to digest no food but milk.

Many a child who is kept clean and given an abundance of good air has violent sick spells because loving parents give him unsuitable food. The child under two can not digest any food that contains starch. Any physician who has the slightest regard for the sacredness of his profession will substantiate this statement. A large per cent of his practice results from the unwise feeding of babies.

To give your child life's best gift, perfect health, see that his second year's food consists of such things as fruit juices, chicken broth, beef juice, baked apples, long-cooked oatmeal, etc. He may be well fed without including a single injurious thing in his diet.

Our grandmothers considered illness among teething babies as a matter of course, but since educators, scientists and reformers have created the great national movement for better babies it is known that the mere process of cutting teeth is not responsible for any ills, and many mothers who have supplemented cleanliness and fresh air by a careful supervision of everything that went into baby's mouth have had their children go through the ordeal of teething without fretfulness or discomfort. The same children have gotten through their second summer in perfect health.

What is Now the Fashion

The only changes in the fashions of the present moment are found in the greater use of ornament and in the preference for figured materials. We find more low necks, more large collars, more buttons and braid, more everything that can add to the decoration of a gown, without making it complicated in the making.

6555. LADIES' WAIST.—Waists show the looseness which marks everything now. No. 6555 is quite in the spirit of the times. This waist has sleeve and body in one and a group of shirring across each shoulder. The front closing leaves the neck a little open and a McNeil frill makes a pretty finish. The sleeve may be long or short. Sizes 34 to 44 inches bust measure. Medium size requires 1½ yards of 44-inch material.

6567. LADIES' BLOUSE.—One of the fashionable tunic models, the very latest and best liked of all styles. The plain blouse has a wide fancy collar and regulation sleeves. There is a pretty folded vest at the neck opening and the skirt portion is quite full. Sizes 34 to 44 inches bust measure. Medium size requires 2¼ yards of 40-inch material.

6575. LADIES' ONE-PIECE FROCK.—A dress suitable for home or street wear, according to the material selected in making it. The blouse is plain, but it has the very low shoulder and here the plain sleeve is attached. Full length or shorter style may be used. The three-gore skirt is gathered across the back and has a suggestion of drapery at the knee. The closing is in front. Sizes 34 to 44 inches bust measure. Medium size requires 5½ yards of 36-inch material.

6344. LADIES' ONE-PIECE FROCK.—The blouse is absolutely plain. The neck is a little open and may be finished with a soft frill, or with a high turn-over collar. The closing is placed diagonally across the front. The skirt is a three-gore design, closing at the side. In the back of the dress a line of buttons marks a seam which crosses the waist diagonally and continues down the side of the skirt, which is very effective, especially when piped with velvet or satin of contrasting color. Sizes 34 to 42 inches bust measure. Medium size requires 4½ yards of 44-inch material.

6218. LADIES' SKIRT.—As plain a model as any one could desire. It has four gores and fits neatly at the top. In the back is a flat panel and at each side of this, at the lower edge, is a small pleat folded well under and pressed flat. Sizes 22 to 30 inches waist measure. Medium size requires 3¾ yards of 44-inch material.

6023. LADIES' SKIRT.—Plain, but the arrangement of the seams gives an ornamental effect. The model has five gores, the back plain, but the front with a point extending far over to the side. Sizes 22 to 30 inches waist measure. Medium size requires 2½ yards of 44-inch material.

6124. LADIES' SKIRT.—A four-gore model, which has a panel front and back, but either gathers or a dart at the sides, the gathers being newer. Sizes 22 to 30 inches waist measure. Medium size requires 4½ yards of 36-inch material.

6558. CHILD'S FROCK.—In children's models we offer a fock very new in all its details. It is of sacque cut, without a separate skirt. It has a very low shoulder and is gathered front and back around the yoke line. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 2½ yards of 44-inch material.

4949. CHILD'S FROCK.—A variation of the sailor dress, with blouse having tuck at each shoulder and a handsome collar and revers. The pleated skirt, as well as the blouse, opens in front. Sizes 4, 6, 8, 10 and 12 years. Medium size requires 3 yards of 44-inch material.

6586. CHILD'S COAT.—For real little girls this is ideal. It shows a coat which is fairly full, with a low closing edged by a shawl collar and with plain sleeves. Sizes 1, 2 and 3 years. Medium size requires 1½ yards of 44-inch material.

5101. SMALL BOYS' SUIT.—For a little man we show a suit which has a plain coat, closing in front and with a wide collar at the neck. In the back is a narrow box pleat. Bloomers complete the suit. Sizes 2, 4 and 6 years. Medium size requires 2½ yards of 44-inch material.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

WAYS OF PREPARING WINTER VEGETABLES

By Mrs. W. C. Palmer

IT IS SAID the early Romans so fully appreciated the use of vegetable foods that they enacted laws compelling their people to combine them freely with their meats in their dietaries.

As the vegetables can be served in many palatable and attractive dishes, one never need lack for variety. Even the commonest vegetables are capable of a variety of ways of cooking and serving. Take, for instance, the potato, which is boiled, mashed, baked, fried or creamed, and, as a matter of fact, there are scores of ways of cooking this one vegetable alone. Cabbage, parsnips, beets and onions do not offer so many variations, yet a little time and thought finds many delicious variations for these as well.

The potato is the staple vegetable and as a rule appears at least twice a day on the table. While the most wholesome preparation is either boiled or baked in its skin, it can be made into many wholesome dishes, stuffed, made into potato puffs, French fried, scalloped, baked in half, made into croquettes or salads, and combined with cheese, or with meat and bread crumbs. Here are two excellent recipes:

Potatoes Baked on Half Shell—Wash and peel one thin, narrow strip around each potato. Bake. When done, cut in halves through the peeled strip. Scoop out the insides. Add hot milk, a little salt and pepper and butter. Beat till creamy. Pile lightly in shells. Just before serving place in the oven for about fifteen minutes. One can force the mixture through the ricer, which makes them all the more dainty.

Potato Croquettes—One pint of mashed potatoes, yolk of one egg, a dash of salt and pepper. Mix together and then run through the ricer and mold into cones or small rolls about an inch thick and two to three inches long. Dip in fine bread crumbs, then into beaten egg, which has been diluted with a tablespoon of milk. Recover with crumbs and fry in deep, smoking hot fat.

Beets are rich in sugar and are easy to digest. They may be served plain with butter, salt and pepper or with a white sauce. They can either be sliced, diced or cut into fancy shapes. They are also nice in salads and for pickles.

Onions can be prepared in vinegar and eaten raw or they can be boiled, creamed, scalloped or fried. They are valuable in seasoning meats, dressings, soups and salads and can even be made into pie. One can be peeled and placed in the roaster with the roast of beef. The flavor will go all through the meat and will be found very delicate in both meat and gravy. The onion can be saved and used in hash or fried potatoes.

Parsnips are next to potatoes, as they contain the most nutriment of any of the starchy vegetables. They can be boiled and cut into slices and then fried a golden brown in drippings or they can be mashed and served with butter or cut into cubes and served with milk or a white sauce.

Carrots can also be served in the same style as parsnips, only do not mash them. The carrot is indispensable in flavoring soups and is a good combination in salads.

Salsify or oyster plant can also be served in the same style as the carrots, besides making into mock "oyster soup."

Rutabagas are nice boiled and mashed with a little butter, salt and pepper. Cream can often be stirred in also and makes a very pleasing dish.

If one has pieces of meat left from a beef stew or roast a nice way to serve it for a change is to cut it into slices of a convenient size, dip each piece in egg, then roll in bread crumbs and fry a golden brown in drippings. Have ready some parsnips or carrots that have been boiled, peeled and sliced. Dip these in flour and fry until brown in the same pan. With stuffed potatoes this makes a very good combination and often leftovers can be used in this way.

This 3 1/2 Foot Telescope Nearly Given Away

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for \$5 to \$8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 2 1/4 feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

Tell Time Two Miles Away

Received the telescope O. K. It is fine. Can see the court house clock two miles away and tell the exact minute.—JENNIE BEERS, Columbus, Ind.

Best for the Money I Ever Saw

I have a word to say in regard to the "Wonder" telescope which I received some time ago. It is the best for the money I ever saw. Would like to know if the price is still good, as my neighbors are worrying me to death about it. I want to order more.—JAS. W. RAINES, Sedalia, O.

A Source of Never-Ending Interest

I have great pleasure in informing you that I have received the "Wonder" telescope. The children, who are forever asking to be allowed to see through it, seem to find it a source of never-ending interest. Please accept my thanks.—CLASCTON C. SWIFT, New York City.

Can See Ten Miles With It

Received telescope last Friday. It is a dandy. Am well pleased with it. I can see ten miles away.—W. E. DICKERMAN JR., Chatham, Mass.

Better Than a \$5 One

I received my telescope in good condition. I think it is better than a \$5 one. I am sending for another for one of my friends and I know of more that want them.—THOMAS MOSMAN, Huffard, Ia., R. 4.

Would Not Take \$10 for It

I received the "Wonder" telescope and it is just dandy. I wouldn't take \$10 for it if I couldn't get another one like it.

I can see ten miles with it and can read 2 1/2-inch printing easily a mile away. I can count cattle at five miles.

No farmer should be without one. It would have him many a long walk to see about his stock.—W. A. ESKRIDGE, Ammond, Ky.

Count Windows in House Seventeen Miles Away

I wish all to know how satisfactory the "Wonder" telescope is. Our farm is on the highest point in the surrounding country. From our place we can see with the aid of the telescope over into the Kansas Indian reservation, nearly twenty miles, count the cattle and tell a horse from a cow; can see a large ranch seventeen miles east that can not be seen with the naked eye; can see the color and count the windows with the telescope.—F. G. PATTON, Arkansas City, Kas.

Finest Thing I Ever Had

I received the telescope and will say it is the finest thing I ever had. I would not take \$5 for it. I think every boy and man on a farm needs one of these telescopes.—CHESTER HOUSEN, Minden, Ga., R. 3.

Our Offer

To advertise the "Wonder" telescope we will send one for only \$1, provided you send 2 names of friends you think will be interested in it. Send 10c extra for ordinary postage, or 20c for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. Full instructions free with each telescope.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our Up-to-Date Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

Every issue a little better. That's the way we wish to make UP-TO-DATE FARMING. And that is the ambition we wish the Cadets of Equity to have. Every effort a little better. Each day to register an advance in some line. In life we are either going up hill or down. To get farther up requires an effort, but at the top is where the sunlight is, and there is where the roses bloom and it is from there we can see the world around us. The achievement is worth the effort. What great men and women have accomplished can be done again, and the great men and women of the future are among the young people of today. Don't allow a lack of effort to disappoint you, or rob the world of what it needs and that it looks to you for.

We do not wonder that a boy brought up on a farm would still like to live there. The writer of the following letter is in a position to know the truth of our teaching as to marketing:

DEAR CADETS—Though I have been a city boy for over thirteen years, I was born in the country and would still like to live there. I have been a reader of UP-TO-DATE FARMING and I think it is the finest magazine one can read, whether a farmer or not, as there are points brought out in it that would interest and make better people as well as farmers. I am in a position to know, as for the last four years I have been working in the grocery business here and in Pittsburg. So you see farming and this magazine are of double interest to me. East Liverpool is a town of some 25,000 inhabitants, and its chief interest is potteries, for which I believe it is noted all over the United States. Newell, W. Va., just across the river, has the largest pottery in the world, and Chester, W. Va., about half a mile above that, has one of the most famous pleasure resorts, Rock Springs Park. So you see, though I can not boast of an F. S. E. union, I have considerable to be proud of. I am 21 years of age, a graduate of high school, and will be pleased to hear from all Cadet girls and boys and will answer all.—John E. Pickens, 140 Ravine street, East Liverpool, O.

I must refrain from commenting on the letters so as to leave room for that many more letters.

DEAR CADETS—I think the Cadet letters are grand. Father took UP-TO-DATE for several years and we all thought it a good farm paper. We lived on a farm thirteen years, but now we live in a small town. Father has an automobile and I enjoy riding through the country in the summer time. I am a lover of music and will be 20 years old March 4, 1914. I would like to hear from the girls and boys of different states.—Annette Baker, Muncy, Pa., Rt. 6.

DEAR CADETS—I am a North Dakota girl, 15 years old, and live on a 320-acre farm five and a half miles from Lone Tree. We have not taken UP-TO-DATE FARMING very long, but I like to read it very much. I go to school during the summer and ride horseback. I would like very much to hear from the Cadet boys and girls and will answer all letters I receive.—Jessie Beatrice Hicks, Lone Tree, N. D.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and think it an interesting paper. I will be 15 March 24 and would like to have a shower of cards from the Cadet boys and girls. I live on a farm of 125 acres and I love country life. I help raise the chickens and I help my mother do the housework. I love to bake cake and fix up good things to eat. I am fond of reading, but my greatest hobby is riding horseback.—Mary E. Feagan, Pembroke, Ky.

DEAR CADETS—I have been reading UP-TO-DATE FARMING two years and think it is the best farm paper published. I am a farmer boy, 21 years of age, and live on a farm of 320 acres. We raise corn and all kinds of small grain. I would like to exchange cards and letters with all the Cadet girls and boys and will answer all I receive.—James J. Jr., Thurston, Neb.

DEAR CADETS—I have been reading the Cadet letters in UP-TO-DATE FARMING and I want to be a Cadet of Equity. My brother takes the paper and I specially enjoy the Cadet page. I am 21 years of age and have taught two years in the rural schools of my county, but I do not like teaching very well. I live on a farm. The young people of our community have organized what we call the Sunshine Club. I would like to hear from the Cadet boys and girls and will answer all letters.—Louise George, Covedale, Ky.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and think it is a fine paper. I read all of it, but I like the Cadet page best and I want to be a Cadet. I am 15 years old and live on a farm of 80 acres. I would like to hear from all the Cadets and will answer all the letters I receive.—Nondess Woodley, Kenwood Park, Ia.

DEAR CADETS—I am a farmer girl and live on a farm of 120 acres. We raise corn, wheat, oats and muskmelons. I can plow and roll the corn ground and help my father feed the stock. We have taken UP-TO-DATE FARMING for about three years. I will be 17 April 17 and would like to have a shower of cards from the Cadet boys and girls. Will answer all I receive. I can play some on the organ and would like very much to become a Cadet.—Cathleen H. Jacoby, Lebanon, Ind., Rt. 10.

DEAR CADETS—Here comes a boy from the "show me" state. My father takes the UP-TO-DATE; I go to school most every day. For it's only half a mile away. As I am only 12 years old I do not wish to be too bold, But I am going to make a start. And to those who write I'll do my part.

—Jerome W. Gable, St. Clair, Mo.

DEAR CADETS—I am a country lad of 17 and a junior in the Northampton high school, where I am taking the commercial course. We have but two months for our vacation, July and August. I spend most of it on my father's farm. He has been taking UP-TO-DATE for the last three years. I am much interested in the paper, especially in the part assigned to the Cadets of Equity. I would like to become a Cadet and correspond with the Cadet boys and girls. Will answer all letters and post cards I receive.—William J. Strauss, Coplay, Pa.

DEAR CADETS—My home is in Nebraska, six miles from Wisner, but my parents live in town. I have two brothers and one sister. We farm 480 acres and have thirteen horses and three mules, and always keep a large number of hogs. We usually fatten the hogs on alfalfa hay and corn. Our chief crops are corn, oats and wheat. I am attending Freeman College. They call me the college clown. I can turn hand springs, summersaults in the air, walk on my hands and do other foolish things. I have some twenty hours of work in school. I am taking the first year's academic course. I am very fond of writing letters and I wish all the Cadet girls and boys would cheer me up with a letter, long or short, while I am away from home and feel so very lonesome. My age is 16 years.—Otto G. Risser, Freeman, S. D.

DEAR CADETS—My brother has been a subscriber for UP-TO-DATE FARMING for three years, and though we take other papers, I like UP-TO-DATE best of all. I live on a farm of 150 acres, the greater part of which is under cultivation, and we raise hay, wheat, rye, oats, corn and potatoes. Potatoes are by far our best yielding crop and bring the largest income. I am interested in poultry raising and hope sometime to make a success of it. We have been having some fine weather, from twenty-five to thirty inches of snow, and only for one day have we had extreme cold, 20 degrees below zero. I am writing January 19. Sleighting parties are numerous. Every one, young and old, takes advantage of this beautiful weather. I am 24 years old and was a school teacher until my father's death three years ago. I would enjoy hearing from teachers of other states and from other Cadet boys and girls, especially those of the west, as I expect to make my home there in a short time.—Rose Hoeh, Punxutawney, Pa.

DEAR CADETS—I am taking UP-TO-DATE and I have a boy, 13 years old, who is very much interested in the Cadets of Equity and he has been teasing me to write for him so he can get acquainted with the Cadets. We live in Hazardville, Conn., for we own a farm out here, but we get our mail at Thompsonville, because my husband works there. As soon as the boy sees his father getting off the trolley he runs to get the paper to read what the Cadets say. Then he keeps begging us to help him get in it. I am Mrs. John Dobrozensky, mother of William Dobrozensky, P. 6, Box 50, Thompsonville, Conn.

DEAR CADETS—I am a schoolboy, but I am also a farmer and help my father and brother take care of and feed the stock, which consists of mules, horses, cattle, hogs and sheep. We also make a strong feature

of poultry, and the eggs bring in a nice revenue. Our farm consists of 480 acres and usually our large crops of corn, wheat and hay bring good prices, but last year, because of the hot winds and drought, our corn crop was poor, and we had to buy corn instead of selling it. Among the things I feel great interest in is the protection of the birds. I am sure they, especially the Bobwhites, are the farmers' friends, and it is wrong for the hunters to come on the farms and shoot them. I will be glad to have the Cadets write to me and I will sure answer them. I like southern Illinois.—Claude Cook, Dahlgren, Illinois.

DEAR CADETS—I am an Oregon boy, 21 years of age, and was born on Little Snake river, Idaho. We traveled for seven years with a team and wagon for the health of my sisters. During the time we went through the Yellowstone Park of Wyoming. We came to Elkton, Ore., in 1907, where my twin sisters were born, and from there we came to Gardener, which is our present home. My father died last Thanksgiving and since then I have been taking care of my mother and sisters. There are six of us children. I ran a gasoline launch for the Southern Pacific Railroad Company this last fall. I went to Portland to get my pilot license. Last summer I fished for chinook salmon. I cleared \$300 in two fishing for silver salmon, which, like the months, The 1st of September we start others, we sell to the canneries. I fish with a 250-fathom drift gill net. I fish all night and sleep in the day time. There are about thirty boats engaged. Two years ago I cleared \$700 in three months fishing for silver salmon. We go to the ocean beach many times during the summer and gather sea shells, catch crabs and dig clams. I am trapping this winter with eighteen traps, and yesterday I caught two minks and one muskrat. This is a healthy climate, though we have almost steady rains during winter. I would be glad to correspond with any of the Cadets, girls or boys.—Henry Hudson, Gardener, Ore.

The above is a longer letter than we usually print, but it gives a good idea of how people live in a distant part of the country. We must now close for this issue.

GENUINE DIAMOND RING 12c

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.
C. Hayes Taylor, Indianapolis, Ind., treasurer.
A. Y. Satterfield, Sterling, Idaho, national organizer.
S. W. Morris, Rochester, Minn.
C. B. Lozier, Robertsedale, Ala.
J. Harris Lenker, Sunbury, Pa.
David Holmgren, Tremonton, Utah.
Wm. Grisenthwaite, Oregon City, Ore.
A. O. Weber, Geneva, Neb.
O. E. Scott, Pocatello, Idaho.

State Union Directory

Locals reporting dues and fees of new members in states having an organized

state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Pocatello.

Oklahoma

President, T. C. Monson, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, William Grisenthwaite, Oregon City.
Secretary, F. G. Buchanan, Oregon City.

Gulf Coast District

Florida, Georgia, Alabama, Mississippi and Louisiana—
C. B. Lozier, District Manager, Robertsedale, Ala.

retary of Parkers Prairie (Minn.) Local Clearing House:

It seems to me that all the farmers in Minnesota are ready to co-operate with us if they only know how. It is really too bad that the F. S. E. has not more men in the field, organizing in this state. I am getting letters from different parts of the state where they want to organize. Also there are a good many associations in this state that are ready to federate with us and they want to know what the terms are. I go to Lancaster tonight to speak on federation and the benefits to be derived from national unity of marketing.

The following letter is from a man who sent the blank in very recently: Mr. J. A. Everitt, President:

I have gotten the fever now. I have been out and talked with some of my neighbors and as soon as they were exposed to the fever they came down with it at once. I hope the health authorities will not feel it their duty to quarantine us. If they do not I shall expose myself to all the people here and they will all get the F. S. E. fever. No person is immune if exposed to a genuine case like mine. We will have a local clearing house here in very short order, and then to organize the state!—E. D. Webber of Webber Bros., Farmers, Greenwood, Dela.

In another letter Mr. Webber said that his community marketed as high as 200 car loads of strawberries a day, in their season, and some other fruit and vegetables in proportion. This is a case where this "personal" message induced Mr. Webber to send the blank, and it very likely will result in organizing and federating the producers in the state of Delaware for marketing all the crops by the new Equity System.

We could cite many such cases if space permitted, or if we deemed it necessary. The man who wants to see a better system of marketing farm crops, and particularly the man who is farming and wants to do the business of marketing under better conditions, and has been reading this paper a while, is almost sure to admit that farmers now have offered to them, for the first time, a practical marketing system and are now, for the first time, building a sound organization to operate the system.

But if not fully convinced of these things, or if entertaining a shadow of a doubt, do like this Michigan man—send for further particulars. We quote his letter:

For a number of years I have tried to follow the trail of the Equity Society. I have been greatly impressed with its objects or aims. I believe it has been instrumental in awakening farmers to the need for co-operation in this country. I want to get closer to its work. Therefore my request that you mail me printed matter that will give further information. I want the plan or system to be made clearer than I can get it from reading UP-TO-DATE FARMING.

We are living in the century that will see nation-wide co-operation among Amer-

ican farmers, I believe. I want to see that day and witness the day.—Fred H. Marvin, Editor and Publisher of the "Overseer," Cromwell, Mich.

Let us quote part of his letter again: "I believe it has been instrumental in awakening farmers to a need of co-operation in this country," and "We are living in the century that will see nation-wide co-operation among American farmers, I believe. I want to witness that day."

And who does not want to live to see that day? Then why refuse, or hesitate to do the little part that is each man's duty—to bring such a happy consummation of the dream of all good people, WHILE WE LIVE?

Send the blank. Let's have a thousand of them returned from this number. A thousand new communities entered by a fully equipped organizer. A thousand men inoculated with the F. S. E. fever that no farmer who produces to sell is immune from when once he gets in the line of the epidemic.

Yes, that's the word—"epidemic." It's spreading all over the country. Several million farmers are suffering from an agricultural hook worm disease that causes them to work like blazes for a profit-milking system, without the ability to free themselves. They have been fed on the exclusive greater-crop diet and then buncoed out of the profits on the crops by the same ring that cajoled them into working harder to produce more, to sell for less, until they are largely indifferent to their condition. But an organizer who has the F. S. E. fever can quickly inoculate them and that's the end of the agricultural hook worm.

We may say there will be two stages in the F. S. E. movement—the present one of development and the final and permanent one, when the organization is completed. Naturally, the person who is solicited to become a member wants to know what benefits he can depend on, at once, and in the future.

There is constantly coming to this headquarters a great array of facts proving that our plans of marketing, as well as of buying needed supplies—we always put marketing first—are able to give every community great financial gains immediately. And these benefits increase as the membership of the local clearing house increases, as the organization progresses to a county clearing house and then to the district organization, etc.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the F. S. E.

Our text for the "personal" message in the preceding issue was "Wanted—A Leader in Each Community."

We expect to preach from the same text, with variations, as we have been doing for many issues past, until we have secured them.

We believe in taking our readers into our confidences. Therefore we will say that, by the time this paper reaches the readers, there will be probably 250 of the blanks returned from the February 15th number.

Considering that the circulation of the paper is over 200,000 copies each issue, this is a very small proportion—only one for each 800 of circulation. This, though, is from only one issue and some 2,500 readers have signified their willingness to take the lead to organize in their neighborhoods since the blank was first printed.

We want the number to multiply beginning with March 1st. We think at least 1,000 blanks ought to be clipped and 1,000 men or women in 1,000 more communities declare their desire for a local clearing house of the F. S. E. at their places, in March.

Many of those who sent the blanks have already organized the community clearing house. Many more are still working for it and will succeed. Some, as might be expected, have failed, while some have not tried yet. But most encouraging of all, a few have developed into county and general organizers and whole counties and districts and even states are being organized on the right plan for successful co-operation in farmers' business, as the result of a reader of this paper sending in the blank, like appended.

It is from the ranks of the community organizer that the people come who are leading the hosts of farmers to their industrial freedom. The community organizer is thus all important, because the communities are the foundation units. They are the blocks or bricks, laid one on top of the other and side by side, that are building the greatest institution, and making for the consummation of the greatest and

best movement ever abroad in this or any other country. Besides, it is from the ranks of the community organizers that county, district, general and national organizers are recruited.

Therefore it is well to keep in mind the larger fields that are open when you send in the blank. While no person is required to give more time to organizing than can be spared from regular duties, yet there are cases where more money can be earned in the organizing work than in farming under present marketing conditions. We want to make our appeal as strong as we can for organizers for the larger fields.

There is an enormous unsatisfied demand for such men. To show this demand we quote from a letter just received from L. H. Brochman, sec-

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package Is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, manufacturer, 59 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

Notwithstanding that at present we must accept the market prices, as made more or less as the result of a lot of blind marketing and the manipulations of speculators, yet by the Equity System so many of the old toll gates are avoided and tolls saved, which go to the producer, that marketing by this new system is very profitable at once. To give just a general idea we mention a few gains made, as follows:

Seven cents a dozen on eggs, \$82 on a car of potatoes, \$4 a ton on hay, \$75 on twelve bales of cotton, \$17.50 on a car of oats, \$4 on a small sale of clover seed, 6 1/2 cents to 11 cents a bushel on wheat, 5 cents to 15 cents on sweet potatoes, etc.

These, understand, are profits that are being made now while the organization is building. These benefits are great enough to hold the organization together while it moves forward to completion. When that time comes farmers will positively be in control of the entire situation and they will sell at prices of their own deciding. Consequently the benefits will be all the farmers want to make them, or should make them, in equity.

To get a clearer understanding of the benefits that can be reaped immediately let us take a local clearing house of 100 members in Minnesota. If the wheat marketed is 100 car loads, or 100,000 bushels, and the gain by marketing through the Equity System is only 5 cents a bushel, it will be \$5,000 on wheat alone in one season.

Mr. Webber, whose letter we printed above, says they market as high as 200 car loads of strawberries. We quote from one of his letters:

Most of our produce is sold to middlemen. They are on the ground during the marketing season and each load is sold to the highest bidder. It sometimes seems evident that there had been a beforehand agreement as to what prices would prevail for the day. Of course, this can not be proved, but prices paid are often too low as compared with market reports. For instance, last year we shipped beautiful tomatoes to the New York city market when they were quoted firm at \$1 to \$1.50 per bushel and received less than 2 cents a basket net to us.

Of course, we can not say how much those tomatoes should have netted the producer, but it is clear enough that a system of marketing that is responsible for such results is "rotten."

So why hesitate another minute? The 1914 crops will soon be ready to market. Some southern sections are marketing their early stuff now and they are going through all the uncertainties and getting the same heart-breaking returns, in many cases, as they have for years. The old system has been costing more to market the crops than the producer got for them. The old system is a robber system and it will rob you and the other producers of billions of dollars this year again, if you continue to sleep.

Look at the cartoon on Page 3. UP-TO-DATE FARMING is sounding the alarm as loud as it can and is leading and pointing the way to all good things for farmers through better marketing.

Awake. Don't, then, stand and quibble about the society you will connect with. There's only one leading straight to farmers' absolute and everlasting industrial freedom. Mr. Marvin says he believes the twentieth century will see nation-wide co-operation among American farmers. We agree with him, but we believe we'll see it nearly accomplished in this year—1914.

We will, if we can arouse about 1,000 more communities to action with this appeal, and a like number each month for a few more months.

FARMERS—grain growers, stockmen, fruitmen, truckers, gardeners, cotton planters, potato growers, everybody, awake to the crying need of the hour—more organizers for the Farmers Society of Equity and for federating present associations. Before you make another lick to produce the 1914 crops

Your Seed Corn

Latest News from Dallas, Texas—"Farmers Interest variety won world's sweepstake prizes for ten best ears and single ear of white corn at International Corn Exposition, 1914."

You can start where corn breeders have brought this corn after eighteen years of systematic breeding. For you to breed up your corn to equal this would require many years of painstaking care and cost more than a thousand dollars to get a bushel. For a nominal price you can buy seed of this corn to plant your crop and you can depend on a big increased yield over any other seed you can plant.

Farmers Interest Corn is the best quality and greatest yielding corn in America. Thousands of customers have enthusiastically testified to this. We print many such letters. Some of the growers live in your county. This corn might be called

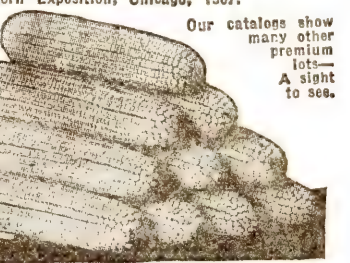

The best-bred corn in the country, none excepted.

Twenty Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

THE ALL PREMI-UM CORN, because it has almost invariably been awarded the highest prizes wherever exhibited.

Our catalogues show many other premium lots—A sight to see.

The general farmer can not afford to take the time and go to the trouble of breeding corn like our Farmers Interest has been bred. But he can profit by the years of work of the breeder by planting this great variety. This corn was bred like cattle and horse and hog breeders breed the fine stock, that any farmer can get today.

Mr. Corn Grower: The cheapest way and the best way for you to quickly get that improvement in quality and yield of your corn that you are thinking about is to buy Farmers Interest Corn of us this year.

Ten Most Perfect Ears. First Prize in Class Open to World. Missouri State Fair, 1911.

Most Perfect Bushel. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

doing it right along with Farmers Interest. REMEMBER, THE EASIEST WAY TO IMPROVE YOUR CROP IS TO LET THE OTHER FELLOW DO THE BREEDING.

A great many farmers must buy seed corn this year, so why not start at the very tip-top of perfection by getting Farmers Interest seed corn?

No other corn has such a record for premiums won. We show only a few prize-winning lots

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Columbus, O., 1911.

others. Our catalog shows. You should send for it before you lay this paper aside.

Established 1880

Read a Few Letters from Farmers

WILL MAKE NO MISTAKE
Ill.—I have been raising the Farmers Interest Corn for a number of years. I have found it to be an enormous yielder and a great drought resister on account of its rooting very deep. Farmers who plant F. I. will make no mistake.—J. N. Bond County, Nov. 26, 1913.

YIELDS ABOUT TWICE AS MUCH
Ohio—Farmers Interest yields about twice as much as other corn does. One-quarter of an acre produced about 25 bushels.—C. W. R., Lawrence County.

100 TO 120 BUSHELS PER ACRE
Ind.—The Farmers Interest Corn is yielding 100 to 120 bushels an acre all over my field. Nothing like it ever seen in all this section before.—L. C. Johnson County.

DOUBLED THE YIELD
Ark.—I am well pleased with the Farmers Interest Corn. It more than doubled in yielding any other variety I planted. I have come to the conclusion that it is the best all-around corn I ever planted. It stood the drought better than any other kind.—S. J. C., Yell County, Nov. 24, 1913.

Send For FREE CATALOG

WE HAVE HUNDREDS OF REPORTS FROM ALL OVER THE CORN BELT BEATS ALL

Tenn.—Farmers Interest beats all other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H., Claiborne County.

STAYED GREEN DURING DROUGHT
Ia.—I am unable to tell what the yield of my F. I. Corn was this year, as I "hogged" the corn. However, I think 60 bushels per acre a reasonable estimate, while I estimate for other varieties at 35 bushels and not more than 40 bushels per acre. The ears of the F. I. were larger sized and the stalks were never fired, but stayed green throughout the entire droughty season.—T. A. Mahaska County, Nov. 27, 1913.

EVERYTHING YOU CLAIM FOR IT
Kans.—My experience with the Farmers Interest Corn leads me to say that it is everything you claim for it. Will produce any variety of corn grown in Kans.—W. M. T., Franklin Co., Dec. 1, 1913.

RULES FOR MARKETING

A circular has been sent to all clearing houses and associations federated for marketing containing the following rules for marketing, as authorized by the last national convention and the present board of directors. The rules are expected to be read in the first regular meeting, after their receipt, or at a called meeting, for the information and guidance of the officers and members.

The rules follow:

1. That headquarters, the national clearing house, shall employ a director of marketing, whose duties are to receive reports of the crops of the members, through the local and county or district and section clearing houses and from associations federated for marketing, and the reports of demand from the society's own representatives on the various markets, and then to direct the marketing so that it does not conflict on the different markets.
2. That representatives be secured on each important market to make daily reports of the condition of the market and the demand, and receive and sell the members' produce of all kinds. That contracts be entered into with such parties that will secure the highest grade of service at the least cost, and that bonds be required where deemed advisable.
3. That as rapidly as possible enough traveling agents of the national clearing house be employed to visit each representative once a month or oftener, to audit all business done and investigate complaints and adjust claims, if any.
4. That all shipments shall be reported to the market representative and to the national clearing house, by the shipper, on forms supplied by the national clearing house. Also to county or district or section clearing house, if one above the local.
5. That sales shall be reported in detail to the consignee and to the national clearing house—that is, the date when sold, the quantity sold, the price sold at and the party sold to. Also a full report of all expenses and commissions properly chargeable to the account.
6. That to maintain the system and extend it, so that the highly important services the national clearing house is required to perform may be possible and increasingly beneficial, there shall be charged against all business done, and remitted to the national clearing house by the market representative, one-fourth to one-half of 1 per

God's Jewels for Earths Ornaments

Flowers are one of Nature's sweetest gifts to man. They are "little missionaries teaching us beauty, purity and innocence." Flowers cheer the heart and make the home life pleasant; nothing for the money spent, can give as much sincere pleasure and delight. No one should fail to plant these interesting flowers. Many are rare novelties. Just sow these seeds in the flower bed and see the surprise.

The Climax of All Seed Bargains

Such a bargain as this cannot last long nor can it be repeated here or elsewhere. Orders are pouring in, everybody delighted and telling their friends about our matchless offer so that our big stock of the Flower Collections will soon be gone. We urge you to order at once—to-day—while the supply lasts. Tell your friends about it. Hurry!

Our Big FREE Offer: Send 10c for a NEW six months' trial subscription to our big home monthly story paper, "THE FAMILY," and we will at once send you the complete GIANT FLOWER COLLECTION free and postpaid. Do it today! "THE FAMILY" is necessary in every home and family and we want you to try it. The Flower Collection is a wonder and will delight you. But send at once—TODAY—make sure of this tremendous bargain. Address:

Family Magazine Dept. 122 Springfield, Ohio

cent for live stock and one-half to 1 per cent for all other products.

7. That all settlements shall be made direct to the shipper.

8. That any local or county or section clearing house, or federated association, knowing any receiver on the markets that has given satisfactory service, and whom it would be pleased to continue with, should report such to the national clearing house, to be considered in making additional appointments.

DO YOU WANT AN ORGANIZER?

If you arrange for a meeting to organize a local clearing house, or to federate a present association, and you feel that you should have help at the meeting, correspond with the organizers, named below, who are nearest to you.

Alabama—C. B. Lozier, Robertsedale.

 Wyoming—George T. Nelson, Pine Bluff; Oscar Burns, Upton; R. A. Southworth, Worland.

Produce Wanted and For Sale

The following report crops to sell or want to buy:

Geneva (Neb.) Local Clearing House (A. E. Webber, Secretary)—Alfalfa seed to sell and wants to buy corn, oats and hay.
 Conrad C. Brandt, Callendar, Ia., wants to buy corn.
 Joe Mares, Emporia, Kas., has first-class alfalfa seed to sell.
 C. B. Lozier, business manager, Robertsedale, Ala., has sweet potato draws to sell at \$1.75 per thousand.
 Emil Fehlaue, business agent, Vergas, Minn., offers one car beans (not hand-picked), one car potatoes (sacked) and ten bushels of clover seed. Will send description or samples. Wants offers.
 C. B. Lozier, business manager, Robertsedale, Ala., wants to buy alfalfa hay, oats, bran and shorts.
 J. H. Harpster, Millersburg, O., reports that they have hay, wheat, clover and timothy seed to sell. And that they want to buy corn for feeding stock, fruit, etc.

Buys Coal, Sells Wheat and Wants Fence Posts

This local is in the market for a car of fence posts, and we are getting prices on lumber. We are also ready to buy a car of sugar. A little later we will be ready to place an order for binder twine.

Our local flouring mill is doing a large business, supplying our and other locals with flour and mill feed at wholesale prices. We run over wheat, the only grain we have to sell, through the cleaner at this mill before shipping. (We have recently sold 10,000 bushels of wheat through Equity). To locals in this section I heartily recommend the Bruning mills for flour and mill feed.

We recently purchased two cars of coal, two of seed wheat, and one of hay. We will send in another list of new members in the near future.—E. Wilhelms, Sec'y., Bruning, Neb.

Oklahoma Department, F. S. E.

State Headquarters at Shawnee
 J. A. Harmon, Secretary

Membership in Oklahoma F. S. E., \$3.50.
 Liberal terms to capable organizers. Write the secretary for a commission and contract for territory.

All members and locals must keep the next semi-annual state meeting in mind. It will be held in Shawnee, beginning August 4. See how large a membership you can have by that time.

Members in need of good improved cottonseed, of the best varieties, should write at once to the state union secretary, J. A. Harmon, of Shawnee.

Members having Kafir corn, Milo maize, feterita, sorghum cane or millet seed for sale should correspond at once with the state union secretary.

Every school district not convenient to a shipping point should have its sub-local organized at once. Local organizers wanted. Write the state secretary.

The state union clearing house at Shawnee has met with great success during the past two years in marketing Irish potatoes, obtaining from 75c to \$1.35 per bushel for F. S. E. members. These prices were from 30c to 50c premium over prices generally obtained by farmers marketing locally.

State union headquarters is planning the establishment of a broomcorn warehouse in the northwestern part of the state, to be constructed some time this year. It will enable us to store broomcorn, obtain cash advances on warehouse receipts, and hold for favorable prices. Every broomcorn grower has an interest at stake in this, and should take part in the work. The way to do best work is to organize the broomcorn district solidly. The National Clearing House is perfecting arrangements with the leading broomcorn houses.

In all probability the broomcorn county having the largest membership in the organization by August 4 will get the proposed broomcorn warehouse. If YOU want it, work for it.

The boys at Lawrence, Harper county, are lining up for the broomcorn campaign. H. C. Berry has the matter in charge and promises a large local at Laverne in the near future.

If you are not getting full value for butter and eggs, get in touch with the state union secretary. Tell him what you are receiving and he will show you how to get more.

If you have surplus alfalfa hay of good quality, let the state union find the best market for it.

Shawnee and Oklahoma City are contesting for the first cotton warehouse. Both will have one in a short time.

Now is the time to begin arranging for club orders for binder twine. Locals should make estimates of their probable needs, and notify the state union secretary.

A Clarion Call of Co-operation

Our Clarion County clearing house is at last a very substantial reality. The first quarterly meeting of our county organization was held at the home of the New Bethlehem local on January 24. Seventy-five or eighty delegates were in attendance, a record breaker. And I am glad to report we can say the same of this meeting that was said of the annual meeting of the national union—every one went home without any mental doubts or "sore spots."

Election of county officials was cared for in an extremely fortunate manner. Mr. Jacob Stahlman, a man of mature judgment and superior character and ability, and above all an ardent co-operator, was chosen president. Marion Switzer, manager of the Frogtown Equity Store, was elected secretary. He is especially fitted for looking after the best interests of the society in a commercial way. W. C. Summerville of Sligo local, another who always moves on the square, was chosen treasurer.

Yes, we are making progress. We believe we are right for our time, and that we are certain to win more members, more territory and more influence and power with normal effort.—R. M. Forringer, Organizer.

Made Extra Profit on Car of Wheat of 6 3/4 Cents per Bushel

Just a word in commendation of the Equity System. We shipped a car of wheat to our representative at Minneapolis. The profit derived by shipping was 6 3/4 cts per bushel on the car. We are to build an elevator before next fall. Please give us all information you can on that line. Wm. H. Rettke, Sec'y., L. U. 7157, Alpin, N. D.

40 ACRES

solid to Superior, American and other best everbearing. Get acquainted with them for mailing expense, and we will send you 6 high quality everbearing plants (worth \$1) and guarantee them to fruit all summer and fall, or money refunded. Stop Wasting Your Money

Improved Long Distance Spark Plugs are guaranteed for the life of your motor. They are the only plugs in the world backed up with an Iron Clad Guarantee.

FIRST COST--ONLY COST

If, during the life of your motor, an Improved Long Distance Spark Plug goes wrong (from any cause) simply return it to our factory and get a new one free of charge.

Buy a set and forget spark plug troubles.

TEN DAYS' FREE TRIAL

Buy one or a set of IMPROVED LONG DISTANCE SPARK PLUGS, and if, at the end of ten days, you do not find them the most satisfactory plugs you have ever used, we will return your money and pay postage both ways. Could anything be more fair?

We recommend that an entire set be installed on the car, thereby producing the same even spark in each cylinder and entirely eliminating that jerk which is so often experienced by the use of the ordinary plugs. By the use of a complete set of IMPROVED LONG DISTANCE SPARK PLUGS, GASOLINE TROUBLES ARE ENTIRELY DISPOSED OF. The best gasoline obtainable is hard to ignite in cold weather. The uniform flow of hot sparks produced by IMPROVED LONG DISTANCE SPARK PLUGS will ignite gasoline in any weather. Our ten days' free trial test will convince you.

IMPROVED LONG DISTANCE SPARK PLUGS sell for \$1.50 each, less an allowance of 25 cents for the return of any old worn-out spark plug on each plug purchased. IMPROVED LONG DISTANCE SPARK PLUGS are universally acknowledged BEST and CHEAPEST in the long run.

If Improved Long Distance Spark Plugs were not BEST we would not dare to give this strong guarantee.

Money Back Purchase Order

Use this Order Blank and Obtain One Extra Spark Plug FREE

Gentlemen--Enclosed find my check for \$5 and under separate cover I am returning four old spark plugs, for which I am to have credit of 25c each on the purchase price of a set of four Improved Long Distance Spark Plugs and one extra plug FREE OF CHARGE--making five in all. It is understood that after trying out your plugs ten days, if I do not find them entirely satisfactory in every way, I am to return them by mail and you will refund the money paid, together

with postage for their return, without a question. State size required.

Our object in giving extra plug free is so you have one on hand if necessary to return a plug for exchange.

Is It Hog Cholera?

Sidney R. Feil, President
THE S. R. FEIL COMPANY
is a Registered Pharmacist,
a graduate of the Cleveland
School of Pharmacy and of
the National Institute of
Pharmacy. He has been en-
gaged in laboratory work
for more than twenty-five
years and was formerly as-
sistant to Dr. Nathan Kose-
water, former Chemist of
the Ohio State Dairy and
Food Commission. For many
years has been engaged in
compounding veterinary
remedies.

Editor of "Wallace's Farmer" Says:

in an article in their issue of November 31st, (which should be read by every farmer who raises hogs) "IS IT HOG CHOLERA?" that is killing off so many hogs. The following is an interesting extract from the article:

Convincing Proof

Saved His Hogs

"I fed the 200-pound barrel of 'Sal-Vet' and believe that it saved my hogs, as the cholera swept this part of the country and I have not had a single sick hog. I have been buying stock hogs and turning in all along, and feel as though I could not do without 'Sal-Vet'.—G. W. Cummins, Cincinnati, Ia.

Good Work

"South of me every farmer has lost his hogs from cholera, even up to the adjoining farm, and it is still raging. Your 'Sal-Vet' did good work for me".—Cliff E. Conover, Holstein, Iowa.

"Have used 'Sal-Vet' with such good results that I induced my brother to send for the keg which you shipped him about four weeks ago. He had several fall pigs that were sick, some broken down in the back and dragging their hind parts. After a few days on 'Sal-Vet' they were up and walking around, and it was astonishing to see the immense number of worms that passed."—Alex Russell, Rt. No. 1, Box 55, Speer, Ill.

"I think I got the 'Sal-Vet' just in time, as all around me, my neighbors' hogs have been dying. A few of mine got sick but I put them in separate pens, fed them 'Sal-Vet' as directed and they were soon all right."

"Have 40 head of shoats that are doing the finest I ever had any do. Feed 'Sal-Vet' to them in their slop to which the fattening hogs run whenever they want it."

"I feed it also to my sheep and horses; never saw so many worms as the bunches which come from my colts."—W. M. Kingery, Overbrook, Kansas.

"I must say I had good results from using 'Sal-Vet'. My stock hogs are doing fine. I have also fed 'Sal-Vet' to a bunch of pigs just beginning to eat. It expelled worms from these by the dozen. Since then they are doing fine, have better appetites, and food is doing them more good."—C. M. Nonweiler, Boonville, Indiana.

"'Sal-Vet' did all you claim for it, and probably more. Hog cholera broke out all around here, but not one of my hogs became sick. I cannot praise 'Sal-Vet' sufficiently, and I do not hesitate to recommend it to all swine raisers."—J. E. Stobil, Rt. No. 1, Box 15, Lohman, Missouri.

"Wallace's Farmer" is right. I am not only satisfied that worms are the cause of a large percentage of the hog losses all over the country, I know it, because I have the proof from thousands of farmers who have stopped their losses with Sal-Vet, though the so-called hog cholera and swine plague were raging on all sides of them.

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great WORM Destroyer

The Great LIVE STOCK Conditioner

If your hogs are sick—if they are not thriving as they should—or if they are well and you fear disease may attack them, you can do no wiser thing than accept my liberal offer to prove to you before you pay me a cent, the wonderful value of Sal-Vet. What it has done for others—it will do for you. I don't claim it will cure cholera—nor prevent it, but if the trouble is WORMS—which is so often mistaken for cholera, and so often just as fatal—

I Guarantee to STOP Your Worm Losses or NO PAY

Worms cause 90 per cent of live stock losses, especially among hogs and sheep, but whether you have lost any stock or not you can't afford to be without Sal-Vet, especially when I offer to prove it will rid your stock of these deadly pests—make them look better—thrive better—save you feed—satisfy you of all this before you pay me a penny. Sal-Vet is the greatest stock preparation on the market—because undoubtedly it has saved more live stock than all others put together—because through its remarkable merit it is more widely used and known than any other. Remember, I prove its merit before you pay. Here's my no-money-down, no-risk-offer—

Send No Money—Just the Coupon

I'll ship enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges on arrival—feed it according to directions, and at the end of 60 days report results. Then if Sal-Vet has not done all I say—if it has not rid your stock of disease-breeding, stomach and intestinal worms, I'll cancel the charge—you won't owe me one penny. Mail the coupon NOW—TODAY—Don't put off trying Sal-Vet on this liberal offer. Address

SIDNEY R. FEIL, President
THE S. R. FEIL CO., Mfg. Chemists,
Dept. UPF CLEVELAND, OHIO

Look For This Label
on all 'SAL-VET' packages. Don't be deceived by imitations. Don't buy 'Sal' this or 'Sal' that, get the original genuine 'SAL-VET'.

PRICES 40 lbs., \$2.25; 100 lbs., \$5; 200 lbs., \$9; 300 lbs., \$13; 500 lbs., \$21.12. No orders filled for less than 40 lbs. on this 60 days trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1-lb. of Sal-Vet for each sheep or hog, and 4-lbs. for each horse or head of cattle, as near as we can come without breaking regular sized packages.

SIDNEY R. FEIL, President
THE S. R. FEIL COMPANY,
Dept. UPF CLEVELAND, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days, and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

Grain Saved Pays Your Thresh Bill

when the Red River Special does the work. It beats out the grain. C. W. Bowman and four other farmers of Nodaway, Missouri, say: "It will save grain enough that other machines waste, to pay the farmer's thresh bill."

Hire a Red River Special

And Save Your Thresh Bill

You have a right to choose the thresher to do your work. It's your grain. Insist upon having a Red River Special. It's the only thresher that has the true and correct method of beating out the grain. The Big Cylinder throws the straw and chaff against the "Man Behind the Gun." This takes out 90% of the grain. The remaining grain is beaten out by the Beating Shakers that toss the straw just as you would on a pitchfork. Other threshers expect the grain to drop out. Write for "Thresher Facts."

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

Good Seed and Good Business

WE ARE COMING more to a full realization of the value of good seed, in the full meaning of the term. To be good enough, seed must come from healthy, vigorous, productive parent stock. The farmers of this country spend millions annually in the purchase of seeds, and though they pay good money for all of it, some of the seed is not what it should be.

Thousands of bags of seed potatoes are shipped from northern states to the southern trucking districts. Certain sections of Florida, Georgia, Alabama, Mississippi, Louisiana and Texas use them in immense quantities. Other southern states also buy liberally of northern seed. Certain sections of New England, New York, Ohio, Michigan, Wisconsin, Minnesota, the Dakotas and the northwest grow the seed, mostly on contract. Farmers buy them for planting. It will be good business for these buyers and sellers to get together, through the Farmers Society of Equity. Then the growers of the north can contract with the planters of the south. There is no reason why this business need go through the hands of speculative middlemen. With the farmers of both north and south in the same business organization, with facilities for the distribution and marketing of all farm crops from all sections, they can keep their own business in their own hands.

Seed Potatoes from Wisconsin to Florida

A single instance will serve as an example. Dade and Palm Beach are two large counties of southern Florida where immense areas of potatoes are grown in January, February and March. Seed by the train load is sent to these counties every year. The farmers in those counties must buy the seed every year. Marinette County, Wisconsin, is one of the great northern seed potato districts. In 1913 the county produced over \$400,000 worth of potatoes. Car after car is being loaded and shipped south, by contractors and speculators. Co-operation, through a single organization, offers the simplest, most economical and efficient plan for getting the potatoes from producer to planter at a fair price to both.

Seed Corn for Kansas

One more example: Kansas alone plants, on the average, over 1,000,000 bushels of seed corn each spring. The total amount of seed corn planted each year amounts to many million bushels. While, of course, the great bulk of seed corn is saved on the farm, yet on account of weather or other conditions several million dollars worth of seed corn is purchased annually. This year Kansas farmers will have to buy a large per cent of their seed. It must come from farmers somewhere. With a national organization direct distribution could be easily accomplished. Is it not clearly apparent that there is a well-defined, economical need for the Farmers Society of Equity?

Keeping the Young Folks on the Farm by Community Co-operation

How to keep the young folks on the farm? Why, do it by community co-operation. We are told this is a national problem, a state problem, a community problem, and a family problem. And so it is. But don't forget that there are boys and girls born and raised on the farm that have no business staying there. It would be a waste of their talents, a crippling of their natures, a curtailment of their usefulness and an impossible task anyhow. You can't do it. Just being born on a farm doesn't necessarily equip an individual with the qualifications to make a greater success at farming than at anything else. They are natural born farmers only so far as birth is concerned. There are, of course, two sides to the question. There must be before there can be a question. The other side to this question is that many of the farm boys and girls really should stay on the farm, but do not believe it. They are by nature better fitted for success and happiness on the farm. This is no disparagement of their abilities. It takes brains and ginger of no ordinary grade to make a real success on the farm. But even one who is capable of making a great success as a farmer might not have the right kind of capabilities to succeed at some other work in town. A boat, you know, may be a very fine boat, a most excellent boat, yet out of the water it is worth little. Keep in your element, and here is where the real problem comes in—that of keeping the young folks on the farm who should remain there. It is an individual problem and a community problem. The state or the nation can't keep them there if the community or the individual fails to do their part. Our next issue will have something sensible and practical to offer for the solution of the problem. Watch for it.

Publishing a Paper with a Policy

We believe we are giving the farmers of this country a paper that is doing something for them that is worth doing. We believe we are helping every reader to be more, have more and do more than he or she would likely be or have or do if the paper was not a regular visitor in their homes. If we didn't believe it we would get out of the business. In fact, we would be driven out. Business nowadays is built for service and can only succeed as it serves its patrons. We believe we are rendering our readers a service because so many of them tell us so. With your careful attention, and willingness to co-operate with us, we can serve YOU, reader, in a way no other paper can or will. We're willing and ready. Come along.

Balanced Rations

The Slogan of Success

By Burton Braley

If you're sick of doing business unassisted
And of getting every lemon that is listed,
If the railroads seem to make a point to
loot you
And their merry ways of dealing do not
suit you,
If the trusts and combinations always skin
you
And they rouse the sullen anger that is
in you,
Cease to blame it on the Senate or the
weather;
"Get together!" That's the answer. "Get
together!"

When the western farmer tackled irrigation
He discovered that he faced a situation
Where he simply had to chip in with his
neighbor
For the capital, material and labor;
So he conquered all the wilderness which
braved him,
For he tried co-operation—and it saved
him.
If you want to know the wherefore and
the whether,
"Get together!" is the answer. "Get to-
gether!"

You have fought for many decades single-
handed,
And it's mighty little benefit you've landed.
For commission men and other speculators
Have robbed you on your wheat and your
"potatoes."
If you like the sort of treatment you are
getting,
Then, of course, there's nary use in any
fretting,
But if everlasting patience slips its tether,
"Get together!" That's the answer. "Get
together!"

A rich soil makes a rich farmer.
It is a superior farm that has a local
reputation for profit making.

Civillization must trace its motive
power back to the soil of the farm.

There's a new world right under-
neath the surface of this old one. Dig,
and discover it and its wealth.

An Illinois county, in building a new
court house, put in a suite of rooms for
the office of the county agent.

A fine farm and a high-class manu-
facturing plant have many things in
common. So should the managers of
them.

When the boy leaves the farm
there's usually something wrong with
it, or with the farmer. Not always,
but usually.

The little old sod shanty on the
plain is going to keep company with
the little old log cabin in the lane—
at rest in the memory of men.

With money in every farmer's pocket,
factories hum to supply his orders,
the worker finds steady employment
at good wages and buys more of the
products of farm, garden, orchard and
factory. In short, prosperity reigns.

If you need credit at your bank,
show your banker a carefully kept ac-
count of your farming operations. If
you know what you have done you
know what you can reasonably do.
Banks have confidence in men who
know.

Well, well! Farmers who have had
the advantages of high school educa-
tion are now making nearly double
the average income of those who had
only a common school education, de-
clare investigators from the Office of
Farm Management, United States De-
partment of Agriculture. There are,
of course, the usual exceptions to this
rule, which, of course, proves it.

Uncle Sam Lends a Hand

Congress promises the farmer national aid in ridding the United States of the hog cholera scourge. With the co-operation of farmers this dread disease can be practically stamped out.

To Perfect Potato Marketing

FOR a number of years potato growers on the eastern shore of Virginia and Maryland have been organized and dispose of their potatoes by means of their organization. In a measure they have met with encouraging success. At times, however, they have found markets so badly demoralized they have been unable to sell for prices that made the crop as profitable as it should have been. The reason for this can be traced to the utter lack of an intelligent system of marketing the potato crop as a whole. The growers of the eastern shore, standing alone, and practically competing with other potato-growing sections, were without knowledge of when and where other growers in distant sections were marketing. This lack of information and co-operation demoralizes the markets frequently and causes needless losses to producers.

There are large potato-growing areas in Wisconsin. County potato growers' associations have been organized throughout the state and the Wisconsin Potato Growers' Association is working with the county associations to improve conditions for profit making. Michigan and Minnesota also produce immense crops of potatoes for the markets of the United States. Each has to an extent organized local associations to improve the handling of the tubers.

Idaho is famed throughout the west for the quality as well as the quantity of its potato production and Montana is making almost as enviable a reputation as a producer of prime "spuds." The potato growers are organizing, largely in the Farmers Society of Equity, and also to some extent in associations of local character. The Farmers Society of Equity and the Southern Idaho Producers' Association are making arrangements to combine their forces in the marketing of their potato crop, finding it more sensible and more profitable to co-operate than to compete.

Before the potato markets can be kept in a good condition for all shippers, and therefore in the best condition for the ultimate consumer, there should be a close and active co-operation between all potato-producing sections. All associations should put their co-operative principles to better use by co-operating with each other, through a federation with a national body. This is essential to maximum success. The Farmers Society of Equity is the one national organization of farmers for marketing purposes that is advocating this plan and working for its accomplishment. It is making great progress in a majority of states. This progress will spread to all crops and to all sections when the economic necessity for it is better understood, and time and experience will soon demonstrate that necessity.

What Others Say and What We Think of It

"We have been teaching and preaching too much by guess."—Prof. E. G. Montgomery, Agriculturist, Cornell University. Well, we guessed as much.

"Iowa girls seem of a superior quality."—Mrs. Virginia C. Meredith of Indiana, in the Breeder's Gazette. None better, except those in about forty-eight other states.

"Many good farmers have wondered why their congressman should send them free a nickel's worth of garden seed under the postoffice frank."—The Gleaner. Well, it didn't cost him anything, and it might get him a vote. Cheap politics, you know.

"We have an alarming condition in New England today. Our farms are running out, the acreage under cultivation growing less, because their cultivation does not pay. Yet, in nearby markets, the products are so costly as to make a nation-wide squeal. What is the trouble?—Public Service. You've just told it—farming doesn't pay the farmer.

"The United States government sets out to run a business, like the post-office, which does a \$300,000,000 business a year in the business of communication, transportation and banking, and does it through novices, many of whom are without technical experience, and most of them deficient in business qualifications."—Public Service. There's truth in this. If the government were run on a business basis it would save taxpayers millions of money.

"Co-operation has been successful in other countries, wonderfully successful. Hence, about the most important question before the American people, both producers and consumers, is how this success was attained, where successful, and why it has failed where unsuccessful. This is the only hope that we have of decreasing the cost of living to the consumer and yet giving the producer his fair share."—Wallace's Farmer. The only way to co-operate is first to organize. Can you help us organize, Mr. Wallace?

"We feel sure that the methods of killing, curing and handling of live stock and meat products in our packing houses are second to none to be found elsewhere. It is a well-established fact that our American packers lead the world in methods of efficiency. The reports show that they are now selling the dressed beef by the carcass for from \$7 to \$11 per carcass less than what the animal costs on foot. This means that out of the hide and offal must come from \$7 to \$11 per animal before anything can be taken out for salaries of help, losses of meat through condemnation of parts or whole carcasses, interest on plant and investment and profits."—Chicago Daily Farmers and Drivers Journal. If this report is true a lot of folks owe an apology to the packers, but the question is, is it true? Who knows?

The County Agent: His Duties and Value

THE COUNTY AGENT, agriculturally, is a man with several employers, but is controlled in his activities, more or less indirectly, by the Bureau of Farm Management of the United States Department of Agriculture. He is paid in part by the farmers and other citizens of his county who voluntarily contribute a stated amount of his salary, in part by the county, by appropriation, and in part by the state. As soon as the Lever bill becomes a law in operation, then a part of the expense of the county agent's office will be paid from a congressional appropriation, controlled by the Department of Agriculture at Washington, D. C.

What the county agent should and should not do—in other words, what the Department will permit him to do—is told clearly and tersely in the following announcement, issued from the Bureau of Farm Management.

County agricultural agents are sometimes referred to as "county advisers." This implies a misunderstanding of the real work of the agent. Advisory work is a part of the agent's duties, but is a minor part. Farmers quite generally resent and refuse to support the county agent whose work is outlined to them primarily as that of an adviser. As we conceive of it, the county agricultural agent has about half a dozen principal functions.

(1) He studies the agriculture of the county to learn what is being done, and what is worth while agriculturally in each part of it. This study includes farm financial and organization surveys.

(2) He gives the results of his studies to farmers, not in the way of advice, but as facts observed and conclusions drawn. This is done through the local press, lectures, institutes, circulars, short courses and personal interviews.

(3) Based on these local studies and the ascertained needs of the county, clubs, associations and the like are organized and the individuals solicited to undertake definite lines of agricultural improvement on their own farms. Organizations are also formed for co-operative buying and marketing and the standardization of farm products.

(4) He co-ordinates all existing agricultural agencies within the county so that all may work unitedly and efficiently.

(5) He develops local leadership. The task of improving the agriculture of an entire county is so stupendous that the agent must be primarily an administrator. He must inspire and accept the help of voluntary assistants in work.

(6) He acts as the connecting link between the scientists of the research institutions of the state and nation and the farmer, presenting the results of investigations in such a way that the farmer can use them, and calling attention of scientists to the local agricultural problems of the county and soliciting their assistance.

(7) He gives advice. This may relate to spraying, seed treatment, mixing fertilizers, combating insect pests, cultural practices or other miscellaneous matters which are the stock in trade of every well-informed agent. We place the giving of advice seventh on the list because, in actually improving the agriculture of the county, it is probably of least importance, though in point of time it may be the first work undertaken.

In regard to the activity of the agent in co-operative buying, the Department has this to say:

Occasionally objection has been made by fertilizer companies to the activities of county agents in organizing farmers for co-operative buying. The policy of this office with reference to such matters may be stated as follows: County and state agents co-operating with us are expected to advise farmers (1) concerning the character of fertilizing materials to use under given conditions; (2) how to organize for the co-operative purchase of fertilizers when it is to the advantage of the farmers to do so; (3) how to prepare fertilizing materials for use, including methods of home mixing of fertilizers; (4) concerning monetary

value of goods of given composition. County agents should not (1) make purchases for farmers or farmers' organizations or (2) recommend the goods of any particular firm or individual.

Some may not understand the reason for forbidding the county agent to recommend specified goods, or to make purchases. It probably lies in the fact that as the agent is practically an employee of the public, paid from funds to which all must contribute, it would be an act of injustice to permit him to discriminate against any one who contributes to his support. A manufacturer of fertilizer, for instance, could hardly be justly compelled to support in office a man who would either himself directly, or by recommendation throw business to some competing fertilizer factory. The same reason holds good for the refusal of the Department to allow the county agent to recommend any one farmers' organization. Other competing organizations could justly object to having their members pay taxes to support an officer who would throw his influence to a competitive association. These facts, often lost sight of, proves the absolute necessity of farmers organizing just one business association, and employing their own business managers. This kind of organization is the only kind that will give the farmers benefits to a large degree, and there can be no hope of the government or any of its agents doing it for the farmer, for the reasons stated.

As to the economic value of the county agent, the Department sets forth the following views, based upon its observance to date:

During the summer of 1913 this office, in co-operation with the Pennsylvania State College, endeavored to determine just how effective is the work of the demonstrator. The demonstrator whose work was surveyed had been employed for three and one-half years. While his work had largely been in one county, yet considerable time had been spent in adjoining counties. Seven hundred seventy-four farmers were interviewed in this survey. Of this number it was found that 22 per cent had actually met and received personal advice from the county agent. Of these who had met him 86 per cent were actually following his instructions in connection with their farming. Of the total number of farmers interviewed 19 per cent had received personal letters from the county agent, and of these 70 per cent were actually practicing the advice which had been given them. Forty per cent of the total number interviewed had either personally or by letter been in touch with the county agent, and of these 81 per cent were actually following his instructions. Of those farmers visited who knew of the county agent only through newspaper or general circulars 28 per cent are actually following instructions so received. Of all the farmers visited in the survey, 774, 40 per cent of them actually acknowledge that they have been influenced in their farming through the advice of the county agent.

President Waters of the Kansas Agricultural College is quoted as follows:

"Of six or seven hundred counties or districts in the United States that now have tried out the county farm assistant—I like farm assistant better than farm adviser or farm agent—not one has dispensed with its man. That is the strongest evidence in favor of the success of the farm demonstrator propaganda that I know of.

"The farm assistant has not only proven himself indispensable, but he has shown the possibilities of carrying the demonstration idea farther. One assistant in each county can not do all the work. I am confident that before many years the most progressive of the counties will have two, three or four assistants—one for each of the several branches of farming followed in that county. It's bound to come to that. The fear that the new idea would go too fast is unwarranted. It's a healthy growth, and it has only begun."

ly \$20,000,000 for agricultural purposes. Quite a sum, it is true; yet it is small indeed when compared with the amounts appropriated for the Army and Navy, and other purposes not one whit more important than agriculture.

One very interesting feature of the report of the secretary of agriculture, upon which the bill is based, is the Secretary's plan for a complete reorganization of the Department of Agri-

culture, including the weather bureau, the idea being to get more and better service, and bring the department and its work into closer, more efficient touch with the man at the plow handles. From what the Secretary says, the various bureaus and divisions of the department have not been working together to as good advantage as might be, and the bill provides for a closer co-operation in the machinery of the department.

The bill would change the name of the bureau of statistics to the bureau of agricultural forecasts, and would increase from \$50,000 to \$200,000 the appropriation for the new office of markets. The bill proposes a specific appropriation of \$353,060 for the office of public roads; to investigate the best methods of road making; and the chemical and physical character of road materials, and for field experiments in the construction of high-class roads. For investigation and improvements of grasses, alfalfa, clover and other forage crops, \$175,000 is proposed.

Other proposed items include importation of Corriedale sheep from New Zealand for breeding purposes; eliminating of powdery scab disease in potatoes; investigation of diseases in ginseng; investigation of the causes of the death of thousands of wild ducks annually in Salt Lake valley, Utah. To protect migratory birds; to explore and investigate possible sources of supply of potash, nitrates and other natural fertilizers; and erection of a laboratory at Arlington, Va., to study fixation of atmospheric nitrogen by electrical methods.

The two-hundred-thousand-dollar appropriation for fighting forest fires is

cut down to \$100,000. For investigations and experiments in dairy industry \$256,490 is proposed.

For cattle tick work in the south \$400,000 is proposed. For investigation of the cane sirup and beet sugar industries, \$41,495 is proposed.

The bill would appropriate \$300,000 for meat inspection, and would extend inspection to reindeer. The old congressional free seed distribution would be discontinued, and an appropriation of \$257,000 for purchase, propagation and congressional distribution of valuable seeds, bulbs and plants is substituted.

We are deeply interested in that \$200,000 appropriation for the new Bureau of Markets. Marketing is the one great problem now before the whole country. It will be found, however, absolutely necessary to have the farmers organized before this new bureau can accomplish anything of material value for either producers or consumers. Whatever the Bureau may do or advise, it will require organized effort on the part of the farmers to get any good out of it, and it seems to us most essential that the farmers own and operate their own organization independent of the government or any other institution.

There are a few items which look rather queer, from a farmer's standpoint. For instance, investigating diseases of ginseng, finding out the cause of the death of wild ducks, and building a laboratory to "study fixation of atmospheric nitrogen by electrical methods." Possibly it is well to know these things, but it seems there are more important matters in need of the attention given to these rather novel purposes.

A Congressman on Farming

THE BETTERMENT of agriculture is not the problem of the farmer, but the problem of the nation," asserts Hon. Hatton W. Summers, congressman at large from Texas.

"Nothing is more important to a nation than to have its people well fed," emphatically declares Mr. Summers, and especially is this true in a nation like ours, which must depend on the wisdom, patriotism and good judgment of its people for the administration of its government and its perpetuity.

"We of the cities should be most intensely interested in the best methods of production, because these things determine the volume of food which we will have to eat, and eating ever remains the primal necessity of man, with the fields as the great source of supply. The brown stone palaces, the skyscrapers, the gilded streets of our cities can not feed the mass of humanity struggling within their confines. These must look back to the land for sustenance. Those who eat should be more deeply concerned about better methods of farming than those who produce crops merely for the money that comes from their sale.

"If the inhabitants of a city which got its water supply from a reservoir beyond its borders should learn that the source of supply was being constantly reduced, they would not sit with folded hands and say, 'This is no concern of ours, but of the people who live around the reservoir or work there,' would they? Our most priceless treasure, the fertility of our soil, has been so dissipated by slipshod methods of tilling it that we are now face to face with the necessity of increasing its power to produce. We who would eat must get in touch with the things of earth once more, as consumers if not as producers.

"Our rich virgin soils are fast becoming things of the past, and we can not abandon the depleted fields as we cast off a wornout garment and seek a new one. We have to stay in the

occupied territory. Our grazing lands and timbered lands have been subdivided. We have no more the free fields. Our great west is now occupied by settlers. Build up the neglected soil so that it will produce enough food for all our people."

"Agriculture," insists Mr. Summers, "should be the best-conducted business in the world, as all other business interests are dependent on it. In the soil is the source of our wealth and from it we must get the money to carry on any other business. As life itself is more important than the conveniences of living, so is agriculture more important to the nation than other interests which have received much attention in the past."

The farmer should not only raise bigger and better crops, but also get a bigger share of the price the consumer has to pay for what he eats. Help the farmer to make farming more profitable without making the increased profit a burden to the consumer. One of the ways of bringing this about is to devise a system of marketing that will get to the consumer vast quantities of perishable stuff that now goes to waste in field and orchard because the farmer can not get enough for it to pay him to ship it.

Mr. Summers thinks the marketing problem will be partly solved through stimulating the farmers to better methods of production, based on psychological fact that when you can get a person to do any part of a business well he is not afterwards satisfied to do any part of it badly. There is much truth in this. But we must not overlook the fact that desire to do better must be attended by ability to do as one desires. Many farmers would now adopt more productive methods if they had the means. They would obtain means on credit, if they were reasonably assured of profits sufficient to enable them to meet their obligations. The fountainhead of this entire problem lies in profitable prices, which can be assured through co-operative and controlled marketing.

The Agricultural Appropriation Bill

CONGRESSMAN LEVER, author of the well-known Lever bill, to promote scientific demonstration of advanced methods of agriculture by means of county agents, is chairman of the House Agricultural committee, and during the latter part of February reported to the House from out of the committee the annual agricultural appropriations bill, which calls for the expenditure of near-

ly \$20,000,000 for agricultural purposes. Quite a sum, it is true; yet it is small indeed when compared with the amounts appropriated for the Army and Navy, and other purposes not one whit more important than agriculture.

One very interesting feature of the report of the secretary of agriculture, upon which the bill is based, is the Secretary's plan for a complete reorganization of the Department of Agri-

Egg and Butter Market

THOSE who buy butter and eggs for storage and speculation are becoming excited. A great meeting of these people was recently held in Kansas City to devise means of maintaining their profits. The selling prices to consumers seem to be the matter of most concern to them, their principal fear being that foreign productions, the prices of which they cannot control, may come into the city markets and be sold in competition with their stored commodities and force down the prices they charge consumers.

It is said that both eggs and butter are being shipped in great quantities from Russia, China and Germany, that they come to both the Atlantic and Pacific coast cities, and that the eggs so shipped in can be sold in this country as low as 14 cents a dozen, and that good butter can be sold below our price for oleomargarine. It is said that during the last year Russia exported no less than 45,000,000 eggs at 12 cents a dozen, and that the transportation charge did not exceed two cents a dozen, thus putting them on the American market at a cost of 14 cents a dozen. Germany is also exporting to this country both eggs and butter in large quantities, and China is becoming the greatest poultry raising nation on earth. Eggs from the latter country come to the Pacific coast, and from the others to the Atlantic coast, thus reaching directly our greatest consumptive demands.

It is not to be wondered at that American buyers are aroused, and that their greatest interest is in the prices charged the consumers. Those are the prices that include their profits, and the Kansas City meeting was mainly to devise a means of maintaining their profits. They must either control or shut out the low priced eggs and butter from foreign countries or they must reduce the prices paid to American producers.

This is the part of the problem in which our own people, poultry raisers and butter makers, are most interested. They know under the present system of marketing they must accept whatever prices the buyers offer. The buyers are organized and act together, as the great meeting referred to demonstrates. But the producers are not organized. As individuals they market both their eggs and butter, and thus marketing they are unable to so much as enter a protest. If they were organized so as to market unitedly, they could supply interior demands at prices equitable to sellers and buyers, and the quarrels of the arbitrary monopolists in the coast cities would matter little to them.

These conditions constantly cropping out, are warnings to the farmers in regard to nearly all products, and they must needs meet them in a way to protect their own interests, or suffer the inevitable consequence of making good the losses from foreign importations.

What It Cast Missouri Farmers to Live on Bad Roads

HOW states and counties are putting money in the pockets of the farmers by investing in the improvement of public roads is shown by a statement just issued by the Office of Public Roads of the Department of Agriculture. Definite cases are cited in support of the argument that where bad roads prevail farmers are forced to move their crops not when the market price is favorable, but when the roads are favorable.

Two farmers living in separate counties but at an equal distance from the cotton market, learned by telephone that cotton had advanced in price \$1.00 per bale. The farmer living on a bad road responded by hauling one bale of cotton, which was all he could get over the unimproved road, while the other farmer was able to haul four bales, owing to favorable road conditions.

A Few Good Points About Buying

Advertising is a spotlight which means death to fakers. Only reliable people can continue to advertise year in and year out.

All advertisers in UP-TO-DATE FARMING are that kind. See guarantee below, which is your protection.

If your dealer does not carry what you see advertised in UP-TO-DATE FARMING, don't let him try to sell you "something just as good." You will be taking chances. Insist upon getting what you ask for, otherwise you are likely to get something "not as good."

Any time you happen to see something you want at your dealer's and it is not advertised in UP-TO-DATE FARMING, you will do the publisher and yourself the greatest good by writing me, giving full particulars. The matter will be given prompt attention.

UP-TO-DATE FARMING readers will realize how important a matter this is for their success and that of the good, big farm paper which is making the fight for a "square deal" for the farmer.

That means you.

A. H. Ludwig

Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

The rise in price gained a profit of \$4.00 to one man, and \$1.00 to his neighbor.

It is shown in the statement that it is common for the farmer to find that he can not haul his produce to market when prices are highest, because the roads are impassable. When the roads become passable, the time for market has largely passed and produce is compelled to move in masses, which frequently glut the market and breaks the prices.

Excessive fluctuations in market prices are seldom due to over production. They frequently take place in regions where the local production does not equal the annual consumption. There are counties rich in agricultural possibilities, burdened with bad roads, where the annual income shipments of food-stuffs, exceed the outgoing shipments in the ratio of four to one. Many such counties with improved roads could not only become self-supporting, but could ship products to other markets.

A farmer in Sullivan county, Tenn., a few miles from Bristol, had 100 bushels of Irish potatoes which he intended to market during the winter of 1907-1908. Owing to bad roads, he was unable to haul the potatoes at all, and they rotted in the cellar. Nevertheless, the price of potatoes at Bristol went as high as \$1.40 per bushel in the meantime. A Bristol merchant stated that during the winter as many as ten carloads of farm produce, including wheat, potatoes, and other supplies, were daily shipped in to feed not only Bristol, but the adjacent territory.

Do Crop Reports Pay?

IN ANSWER to a question recently asked in an Ohio paper, "Do crop reports from Washington pay the farmer?" I venture the following:

For some men I would answer this question in the affirmative and for others no would be the answer. These two answers come from two distinct classes and to which class we belong depends upon our attitude toward the reports; upon whether or not we read them carefully; upon our judgment in our business undertakings; whether we are capable of estimating approximately the future prices; upon how venturesome we are, and how successful we are in bucking the market, a thing which has nothing to do with the value of crop reports, but does play an active part in our financial success. And I am prone to believe that one who has considered "crop reports" in making an investment and has failed as a result of poor marketing will condemn the crop reports, at least to the extent of resolving to be more skeptical

in digesting the crop reports so readily.

There are some farmers who seldom peruse a paper of any kind, and some do not even take a farm paper of any kind and who are apparently successful, probably due to keen judgment, a natural aptitude for their particular work and ability to combat the forces that confront them. From these men would come denunciations of "no good," "not reliable," etc. But just how much better they could conduct their affairs if they had studied crop reports thoroughly depends upon the authenticity of those reports.

No one will dispute the fact that it would be hazardous to place explicit confidence in the sometimes hurried reports from various sources—reports that are sometimes given by parties unconcerned. Parties responsible for reports would be compelled to ride over vast territories in order to be exact in their conclusions. This being impossible, the inevitable result is uncertainty of their value.

In some cases they can be depended upon, especially if you live in the vicinity that is covered by the report, and know, but considerable caution should be taken before you credit the reports with the full force of their supposed intentions.—Chester Cooper, Nebraska.

The Selling End of the Line

WHEN the Cattle Feeders' Association met in Columbia, Mo., this winter, Judge William H. Wallace of Kansas City, Mo., was asked to address the assembly. He being a member of that organization, Judge Wallace told them he would discuss the selling end of the line.

In all the previous talks nothing had been said about the selling end. They had been limited to the proper methods of raising corn, timothy, clover, alfalfa, cowpeas, blue-grass; the proper methods of attending to cows, raising calves and feeding cattle. Much attention was paid to the subject of raising hogs.

Judge Wallace is an owner of a grain and stock farm near Kansas City, where is maintained the second live stock market in importance in the United States, and he has had opportunities to become acquainted with the livestock market. Judge Wallace contended conditions have become such that this is a matter of vital importance to the cattle feeders. The selling end is of vital interest to the producer, no matter what the article produced. Nothing is more discouraging to an industrious farmer than to take up a paper, read a finely worded article telling how easy it is to make money on a farm. The farmer wonders why he has never been able to find the easy way. Judge Wallace makes this state-

ment: "Accounts published in the metropolitan papers as to the vast fortunes made by the cattle feeders are exceedingly misleading. It is admitted that cattle feeders as a rule are making no money at all."

The rule that applies to the cattle feeder can be applied to all other lines of farming. After deducting taxes, labor, keep of teams and necessary machinery, cost of distribution and marketing, the farmer has little or nothing to pay him for his undivided attention to the farm work. A sad reflection on what he might have if the selling end of the line had not been so expensive.

Co-operation seems to be the solution for this other end of the line.—George Hanson, Monroe City, Mo.

Cotton Corporation Troubles

IN THESE COLUMNS we have at various times referred to the Southern States Cotton Corporation and pronounced its plans to compel 15-cent cotton impractical. We cautioned farmers to not place any dependence in it, as a means to obtain steady and profitable prices for cotton, and against investing in its stock. The following dispatch seems to tend to verify our prediction:

DALLAS, Tex., Feb. 20.—An involuntary petition in bankruptcy was filed in Federal Court here today against the Southern States Cotton Corporation.

The petitioners were W. D. Smith, P. C. Wadsworth, J. M. McCoy and Mrs. Mary V. Wadsworth, all of Dallas, who claimed various sums due on cotton sold to the corporation.

The corporation was organized under the laws of Alabama with \$1,000,000 capital. Its announced purpose was to try to hold cotton for a uniform price of 15 cents per pound.

While the matter of solvency or insolvency of the corporation is to be determined by this suit, and we print the dispatch only as a matter of news, we will again say that we consider the plans of the corporation are unsound and it seems to us that it is only a matter of time when a complete collapse must come.

Smile Awhile

Not Yet Under Control

"Pa, did Edison make the first talking machine?"

"No, my son, the Lord made the first one, but Edison made the first one that could be stopped after it had begun."

Some Advantage

"Isn't it a pity that Ziggers has to stutter so?"

"Oh, I don't know. It makes what little he has to say go farther."

Jumps Like His Father

"Your son is so much like his father—his hair, his eyes, his countenance and even his speech is exactly that of your husband. But why does he jump like he was scared when you speak to him?"

"That is just like his father, too."

Anything But That

His wife was an early riser and a great singer. That was the first thing she did of a morning and nearly the last at night. Said her husband one morning as he rolled over in bed: "God is certainly good." "In what way?" asked his wife. "He made a rooster so he could crow in the morning, but he never taught him to sing," was the drowsy reply.

Worked It Both Ways

"Does your father raise his hand, Billy, when you do something he don't want you to do?"

"I should say he does, and he brings it down, too."

Not Binding

"Will you give me your name, please?" asked the young lady who was making a list of those present.

"Excuse me," said he between blushes, "but I will have to plead that this is not leap year."

Just the Same

They were visiting an insane asylum. "This man," said the attendant, pausing before a cell door, "believes that he possesses the motive power that runs the universe. He is entirely harmless, but he actually thinks if it was not for him the world wouldn't move. Isn't it a strange case?"

"Not to me," said one of the visitors. "My husband is exactly that way, and we have never thought he was crazy."

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

SUMMARY of the state of trade, by Bradstreet's, follows:
Irregular. Storms early disorganize trade and traffic in the east. Storm benefit to retail trade. Coal trade good. Great run on shovels and rubbers. Spring trade retarded. Buying cautious. Collections slow to fair. Winter wheat reports excellent. Stock market irregular. Foreign disturbances. Clearings swell, but still below last year.

Storm conditions, similar to what we reported for the west, in our last issue, have since visited the east. Great snowfalls, high wind and cold, demoralized business and transportation, but were not damaging to crops. On the contrary, the wintry weather of February and March, down to the 9th, with snow, have been decidedly favorable to winter grain and grass and fruit. The former had protection at the most critical time, while the latter has secured an extra insurance against spring frosts. All crop prospects please at this season, and preparations are making for planting increased acreages. Reports from the spring wheat states are that the ground is in excellent condition and, barring a wet spring, a record-breaking acreage will be sown. All these favorable conditions, unfortunately, are reflected in lower prices. So, under prevailing conditions, when the farmer casts a larger crop, or weather conditions favor him, his prospects for a greater yield are immediately discounted in any of the commodities he may have on hand of the former crop.

The government reported on March 7 the following amounts of grain, of the 1913 crops, remaining on the farms March 1, 1914:

Wheat—151,809,000 bushels, or 19.9 per cent of the 1913 crop. About 53.9 per cent of the 1913 crop will be shipped out of counties where grown.

Corn—886,392,000 bushels, or 35.4 per cent. About 17.2 per cent will be shipped. Proportion of crop merchantable, 80.1 per cent.

Oats—416,476,000 bushels, or 37.4 per cent. About 26.5 per cent will be shipped. Barley—44,126,000 bushels, or 24.8 per cent. About 48.4 per cent will be shipped.

The winter wheat crop still holds out the very best promise on the largest acreage ever sown. The visible supply decreased nearly three million bushels, but the market

marketing systems should be employed. The California citrus crop is reported at 45,000 car loads, against only 18,000 cars last year, when a freeze caused enormous loss. Florida also has a good crop and prices have been depressed because of the abundance.

Advice

Wheat—If no calamity comes to the 1914 crop wheat prices will probably be the lowest since in the 1890's. Corn and oats—Nothing short of better control of the supply, or unfavorable spring weather for planting, can improve prices. Cotton—Market gradually. Potatoes—Prices will probably be lower for awhile until the first run of liberal marketing, with the opening of the spring season, is over. Then, unless heavy imports arrive from foreign countries, we look for some improvement in prices.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on February 28, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase.)

	Feb. 28, 1914	Change from two weeks before
WHEAT	63,194,000	—2,870,000
CORN	21,682,000	X 870,000
OATS	25,999,000	—1,281,000
BARLEY	7,267,000	X 86,000

The visible supply of wheat in Canada on the same date was 17,452,000 bushels. This is 3,557,000 bushels less than two weeks before and 2,564,000 bushels more than a year before. The visible supply of oats was 15,512,000 bushels on the same date, which is 1,247,000 bushels less than two weeks before and is 6,171,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on March 8, 1914, two weeks before and a year before as follows:

	March 8, 1914	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	94 1/2 @ 95	93 1/2 @ 94 1/2	1.02 @ 1.06

Trade was fairly active today and the market had a buoyant undertone. Although values were without material change. Receipts were fair, reported at 45 cars, and buyers took hold with freedom, although still showing strong preference for fancy Rurals and the best of the Wisconsin round white.

Sales reported were: Per bushel, in bulk, Wisconsin round white—2 cars at 64c, 2 cars at 65c. Rurals—2 cars at 66c, 2 cars Dusties at 68c. Sacked, white—2 cars at 65c, 2 cars at 66c. Wisconsin Triumphs. Per bushel, bulk or sacked: Wisconsin Triumphs. Round white... 55@58c. Burbanks and Kings, poor to good... 58@65c. Dusty Rurals, outside fancy... 65@68c. Michigan, round white... 60@63c. Idaho Pearls... 80c. Oregon Pearls, ungraded, field run... 70@75c. Fancy graded, bright... 80@85c.

NEW POTATOES—Selling fairly at steady prices. Trade appears to favor Florida hamper. Barrels, Bermuda Reds No. 1... \$7.00. No. 2... 6.00. Hamper, Florida, red, depending on size... 2.00@2.50. Lugs, 35 lbs., California... 1.00. The price of old potatoes is 3 to 5 cents a bushel lower than two weeks before. The price of new potatoes is about unchanged from two weeks before. The best

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to February, 1914, inclusive. The lowest figures in February, 1914, were: Wheat, 95c, on February 7; Corn, 61 1/2 c, on February 4, and Oats, 39 1/2 c, on February 11.

price is about 25 cents per bushel higher than a year before.

SWEET POTATOES—There is no special life about the market. Trade is just moderate. Offerings are not

Change same period last yr.	Change from a year before	Change from 2 years before
Bushels	Bushels	Bushels
—1,418,000	—6,961,000	X 444,000
X 5,032,000	—363,000	X 4,604,000
X 648,000	X 8,858,000	X 8,526,000
X 225,000	X 1,399,000	X 3,816,000

large, but there is sufficient supply. Goods attractive, that the best trade can use, steady and fair sale. Common from any cause slow and easy.

Barrels, Illinois, fresh, well packed, sound

and uniform \$2.50@3.00

If uneven, showing some under size... 1.50@2.00

No. 2... 1.00

Hampers, Jersey... 1.00@1.10

Some very fancy quoted a shade higher.

Illinois, choice... 75@85

Illinois are 25c to 50c per barrel higher than two weeks before.

Eastern are a shade higher than two weeks before.

Southern sweet potatoes are selling in western and southwestern markets at 50c to 75c per hamper.

A year before Illinois barrels were selling from \$3.25 to \$3.50. Jersey hampers at \$2.

BEANS—As lately quoted, so the market remains. It rules quiet. Not many beans coming in. Offerings very moderate. They are, at the same time, ample for tame demand which exists. Quoted as follows:

Pea Beans—Hand-picked, choice... \$2.00

Common... 1.75@1.85

Red Kidneys, choice... 2.90@2.95

Brown Swedish, long... 2.00

Round... 2.35

The price of navy beans, pea beans, is from 5c to 10c per bushel lower than two weeks before.

Other varieties unchanged. A year ago the price of pea beans was 5c to 10c a bushel higher than at present.

HAY—Receipts, 2,368 tons. Choice hay steady. Supply fair and demand moderate. Low grades in large supply and quiet. Demand light.

Choice Timothy Hay... \$16.50@17.50

No. 1 Timothy... 14.50@15.50

No. 2 Timothy... 11.00@12.50

Iowa and Nebraska Prairie... 10.00@14.50

Illinois and Wisconsin Prairie... 6.00@7.00

The price of Timothy Hay is 50c per ton lower than two weeks before. Other kinds unchanged.

STRAW—Rye straw quotable at \$7.50@8. Oat straw at \$7@7.50. Wheat straw, \$6.50@7.

The price of each is the same as two weeks before.

BROOM CORN—It is impossible to see how anything new can be quoted. Dealers have only to say what has been said for some time. That is that the market is quiet. Good corn steady and moderate sale; common dull.

Per ton, Illinois corn... \$120@160

Oklahoma... 100@150

Damp and damaged less.

The price is unchanged from two weeks before. A year before the price of Illinois corn was \$100 to \$120 per ton. Of Oklahoma, \$50 to \$60 per ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	7,049	9,198	13,778
Tuesday	8,603	12,160	15,260
Wednesday	8,119	9,832	13,530
Thursday	4,813	6,853	12,050
Friday	7,480	5,689	10,031

Totals... 36,064 43,732 64,649

A further drop of 2@2 1/2 c in the price of eggs occurred today.

There was a fair volume of trade and the buying was more scattered than of late. There was less speculative demand, and with this lacking, a large factor heretofore influencing the market was eliminated. The outside order and local consumptive demand is fair and the receipts are not heavy, but very liberal receipts are en route and likely to reach here the first of the week. The price for the season of the year is considered high and receivers want to keep sold out, even if it required lower prices to effect sales. Moderating weather will start a reduction and larger receipts are anticipated.

Fresh Firsts... 25 1/2

Ordinary Firsts... 24 1/2 @ 25

Seconds... 22

Dirties... 20

Miscellaneous (Cases Returned)... 24 1/2 @ 25

The price of eggs is about the same as two weeks before. Eggs are worth about 8c per dozen more than the corresponding time last year.

Vegetables

ASPARAGUS—In fair demand. BEETS—Salable at good prices. CELERY—There is a good trade and good prices. CAULIFLOWER—

Is having a good sale at firm prices. CUCUMBERS—

Sell a little better, reduced prices having brought out an improved demand. Market is easy. CABBAGE—

Market is liberally supplied and prices easy. Louisiana cabbage slow sale. Barrels from Texas fairly well.

KALE—Moderate sale, ample supply. LETTUCE—Market firm for fancy. Interior grades not selling.

ONIONS—There is a fair trade, and market is steady to firm. Supplies are not large and country offerings are held at strong prices. PIE PLANT—In good demand if good color, thick and fresh. RADISHES—

Supply is only moderate and fancy, clean, well-packed goods has ready sale at steady prices. Common grades not wanted. SPINACH—Supply only moderate and market is firm. STRING BEANS—Supply is fair of green varieties and small of good wax beans. Nice

clean young beans, fair sale. Ordinary to fair, slow. TOMATOES—Market is firm. Recent cold weather in Florida has retarded ripening and good tomatoes have become scarce.

The Dairy Cow and Her Products

Illustrations by Imhoff

The Cream Separator Should Be Low

THE DAIRY COW is the most economical producer of human food. The average cow of the leading dairy breeds will produce yearly in milk for food purposes the equivalent of the carcasses of two steers. It is estimated that one quart of milk is equivalent to one pound of beefsteak. The steers must be liberally fed for at least two years before killing; the dairy cow will produce a large amount of milk and reproduce herself yearly for a number of years. From the dairy cow one receives a weekly cash income; beef cattle must be fed and cared for from two to three years before any financial returns are realized. The dairy cow is one of the greatest factors on the farm. From her milk numerous valuable products are made, while she is the greatest of soil builders. Even after her days of usefulness at the pail are ended she is still of some value for beef.

Selecting a Good Cow

A cow producing 300 pounds of butter or 6,000 pounds of milk per year is more than twice as valuable as two cows each producing 150 pounds of butter and 3,000 pounds of milk per year. The government statistics show to us that at least one-third of the cows do not pay for the feed they consume, to say nothing of the expense of milking them twice a day from 180 to 240 days per year. Many cows have not the inherent tendency to produce milk and many are "loafers." In a recent Illinois test it was found that for one year 25 of the best cows produced the same profit as did 1,021 poor cows. There are two ways of selecting a good dairy cow. First and the most important is by the record she has made for the year; second, by her conformation or type. The dairy cow should be angular, free from beefiness, have a strong constitution, large mouth and nostrils; large, capacious barrel; large, well-shaped, heavily veined udder and prominent milk veins leading to it, for milk is secreted from the blood of the cow. The cow should

A Good Butter Worker

show three triangular shapes—one looking from the front, another when looking down from above and the other the profile outline when viewed from the side.

Feeding

About half the food consumed by a dairy cow is used to maintain her body and to supply the power to keep her various organs at work. With the other half she manufactures milk.

A farmer or dairyman should raise all the rough feed that his herd consumes, such as pasture grass, alfalfa and clover hay, soja beans, cow peas and corn for silage or fodder.

A good grain ration is equal parts by weight of corn and cob meal and cottonseed meal, or bran and cottonseed meal. Feed all the roughness the cow will consume. Unless all the cows in the herd are giving the same amount of milk, they should not be fed alike, but fed according to production. One pound of grain should be fed for each three pounds of milk produced daily.

Making the maximum profit from a herd of cows does not depend alone on the cows themselves. A poor cow is of no profit to any one. A good cow is profitable in degree to the food and treatment she receives, all the way

Dairy Cow and Maid of Excellent Type

from being an expense to returning the maximum up to the full measure of her natural capabilities. What is fed, quantity and quality, and the manner in which it is fed makes a vast difference in the profitable returns. A heavy yielder is usually, though not always, a payer. A smaller yielder is usually, but not always, an unprofitable animal. Profits are determined by balancing the cost of the feed and care against the value of the returns.

The Silo's Place

Silage is the cheapest, most productive feed for dairy cows, and it is cheapest and most productive when properly combined with other feedstuffs to make a balanced ration. Corn, the almost universal crop, makes the best silage, is easiest to raise, easiest to handle, easiest to keep in prime condition. Of course, a silo is necessary, and it should be a good one. Be careful about this. Don't guess, but know that the silo you buy or build is one that will prove satisfactory. Investigate thoroughly, and take the word of none but authorities.

Equipment for Profitable Butter Making

The cow, the barn and the silo are not all the equipment by any means, especially where the cream is made

into butter on the farm. On large farms, where labor is scarce, a good milking machine may be a very profitable investment. It will at least be well to investigate, and here again one should investigate thoroughly.

I know of no farm tool or implement that will pay for itself in so short a time as a good cream separator, where one is milking two or more cows. There are reliable separators on the market that are intended for one to three cows that can be had at very reasonable prices, and for three to five cows for very little more.

The net profit of using a good cream separator when cows will average about 600 gallons of milk per year, will be between \$10 and \$15 for each cow when the milk is used for butter making. This, however, will vary somewhat according to the care of the milk and the care with which it is skimmed.

The profit per hundred pounds of milk that is run through a separator is considerable more in the south than in the north, owing to the longer and warmer summer. With cows of about equal capacity the separator will average about \$5 more profit per cow in a year in the southern as compared to the northern states.

During the cool weather, when milk has to be skimmed, owing to lack of dishes to hold it, before more than about three-fourths of the cream has risen and with everything full of milk sitting around in the way and with the extra price which most people get during winter months, the separator is indispensable.

The separator during the hot months will get about one-third more butter and often double what the pans or crocks yield where milk is handled in a careless manner, yet the price is somewhat lower. So when it is all taken into consideration I consider the cream separator has about the same earning capacity and the profit is about the same in winter as in summer.

Success with a cream separator depends upon a thorough understanding of the machine and how to properly set it up and run it, provided the machine is a good one to begin with. There are many good ones, and some not so good. A poor one, bought because it is "cheap," and on the general principle that a separator is a separator, no matter how it is made or what the cost, will soon rob the purchaser of the price of a good one. And even a good one, if not properly managed, will rob the cream jar. Any one with the will to learn to run one properly can easily do so, however.

Churning is Made a Pleasure

Profits in butter making depend on how much cream you get and the price you get for the product. The price depends upon the flavor, which in turn depends upon the management of the cream from milking time until the butter is eaten. The flavor of the butter is made—it isn't an inherent quality of the cream—but it is made, manufactured, so to speak, during the souring or "ripening" of the cream, and this depends on temperature and time. A good dairy thermometer and a clock are two very essential articles in the dairy room to insure and even product at all times, which is necessary if one is to hold a select, permanent and profitable private trade.

The best churn for a farm dairy is the barrel churn, though large establishments must have a more efficient equipment. There are all kinds of patent churns on the market. A new one has been patented every week for 30 years, and the patent mill is still grinding them out. A patent churn is the first step of the would-be inventor. The barrel or box churn is the best type of all. Some, of course, have improvements others do not have. Washing the butter is also an important and essential step in making the dairy cow pay, and it is quickly and easily done in the barrel churn.

Butter must keep perfectly, or its flavor will be ruined. Salting and working it thoroughly makes it keep perfectly. All traces of buttermilk must be removed, and the salt evenly and completely incorporated. A lever butter worker is a paying investment. It saves time and labor. For handling butter, short wooden paddles are best.

Package for Butter

The success in marketing butter will depend largely upon the kind of package that is used. The old style round print is not so well adapted for this purpose as is the rectangular print, which is generally found on the market at the present time. A wooden de-

Sanitary Floor with Concrete Manger and Swinging Stanchions

Sanitary Floors for the Dairy Barn

IN THE VOLUNTARY MOVEMENT of farmers for better milk at better prices the first step toward improvement is the making of the barn more sanitary by laying concrete floors. The method is so simple than any man can do his own work. The cost is so small and the cash returns are so great that the floors soon pay for themselves in preventing the breeding of flies, in the saving of liquid manure, in the reduction of labor and in the increased flow and improved quality of milk. The plan described below is for a barn in which two rows of cows stand heels toward each other, with a driveway between. It is easily modified to the opposite arrangement. Likewise the method is adaptable to both old and new barns.

Planning and Grading the Floor

For average conditions lay out the stalls on 3-foot 6-inch centers and 4 feet 6 inches in length from a 6-inch manger wall to drop gutter. The manger is 2 feet 6 inches wide at the top and 2 feet at the bottom, with one face sloping up to the feed-alley floor. The depth is 7 inches, measured from the stanchion setting, and 8 inches from the alley floor. The feed alley is 4 feet 6 inches wide. The drop gutter has a width of 18 inches. It is 8 inches deep gauged from the stall floor, which is 2 inches higher than the 8-foot driveway. For establishing grade lines a carpenter's spirit level (or a water level) and a chalk line are very helpful.

To prevent possibility of the floor settling, remove all manure before grading the surface of the earthen floor. Carefully tamp back the dirt around water pipes and the drains which carry waste water and liquid manure to the water-tight concrete manure pit. Do all filling as long as possible before building the concrete floor. As a foundation for the stall floors proper, place a 6-inch thickness of coarse broken stone or screened gravel to keep the floor from direct contact with the ground. Since the stall floors are of prime importance, it is well to make them first. During this operation the unpaved driveway and alleys can be used as working space. Then finish, in order named, the feed alleys, the driveways, the mangers and lastly the gutters.

Mixing and Laying the Concrete

For the plan given, 5 feet 6 inches from the center line of the driveway stake on edge (and to line and grade) a 2 by 12-inch plank, to serve as a form for the stall floor at the gutter. Likewise set a similar board, 5 feet distant, to mold the 6-inch manger wall and stanchion setting. Bear in mind that the stall floor has a slope of 1 inch toward the gutter and that the stanchion setting rises 7 inches above the stall floor. Drainage for gutters and mangers will be provided by sloping their concrete bottoms.

Proportion the concrete 1 bag of Portland cement to 2½ cubic feet of sand and 5 cubic feet of crushed rock, or 1 bag of cement to 5 cubic feet of

clean pit gravel. At one operation lay the full 5-inch thickness of the stall floor and finish three stalls the same as one section of sidewalk. No surfacing mortar is needed. For setting patented stall divisions, follow the manufacturer's directions; for home-made divisions, make mortises by tamping the concrete around greased tapering

wooden cores, which are withdrawn as soon as the concrete stiffens. A wooden float is best for finishing the floor. A steel trowel yields a surface entirely too smooth, and such a finish should always be roughened by brushing with a stable broom.

While the concrete of the three stalls is still soft, mold the stanchion setting (6 inches thick) upon it. As forms use the projecting 7-inch height of the 2 by 12 piece already in place and two 1 by 6-inch boards toe-nailed together so as to provide another 7-inch height and a bearing plate to rest on the green concrete. These forms may be dish-shaped for swinging stanchions.

Sectional View of Floor and Stanchions

by applying a 1 to 2 cement-sand mortar immediately after removing the forms.

Caring for Cattle and Floor

Regardless of the kind of floor, bedding of straw or litter is an absolute necessity; it keeps the cow clean and absorbs the valuable liquid manure. If the help can not be depended on to bed the cows properly, it is advisable to use a removable wooden grating or platform. Cork bricks also give satisfactory results, but are somewhat expensive. They are set in a 2-inch depression in the floor and are held in position on all sides by the concrete acting as a curb.

The Dairy Cow and Her Products

(Continued From Page 7)

vice known as the printer can be purchased for molding the butter in this form, and it is not expensive. Each pound package should be wrapped in a good quality of parchment paper, which can be purchased locally or can

Print Mold and Paddle

be had from dealers in dairy supplies. Another form of package that is often used is round fibre boxes, which hold various quantities from one to five pounds. Where larger quantities of butter are made larger packages, such as five to ten-pound pails and ten-pound tubs, are to be recommended.

A Neat Butter Package

Little difficulty is experienced by those living near a city of any size in finding sale for any quantity of well-made farm butter, provided it is of the right quality and can be supplied regularly. The woman on the farm who has only a small quantity to sell, and that at irregular intervals, can not expect to command the best price.

How I Envy Man.

TAKE OFF THE HORSE'S COAT ALSO

Do you go at the spring work with your overcoat on? Of course you don't—

Coats are a burden—you even roll up your shirt sleeves. Then how can you expect the horses to show proper energy under the hot sun with the same heavy coats on that they have worn all winter and which hold the wet sweat and dirt? Clip them before the work begins with a

Stewart Ball-Bearing Clipping Machine

They will get all the nourishment from their feed—be healthier and look better. They will dry off quickly, be more easily cleaned and feel better generally—that means work better. The Stewart Machine is not an expense—but a highly profitable investment. It turns easily, does more and closer work than any other machine—can't get out of order. Gears all file hard and cut from solid steel bar—protected and run in oil. Includes 6 feet new style easy running flexible shaft and celebrated Stewart's Single-Tension Clipping Head. The only machine that can be used without change for horses, mules and cows. You can make money clipping your neighbors' horses while yours will do better work. Each machine guaranteed. If it doesn't give perfect satisfaction, return it and get your money back. Complete from your dealer at **\$7.50**. If he can't supply you send \$2 and we will ship one C.O.D. for balance.

Get More Wool

from your sheep, longer, better wool that will bring you from 15c to 20c more from each sheep. Your flock will feel better and look better also. The

Stewart No. 9 Ball Bearing Shearing Machine

will more than pay for itself the first season. Any boy can run it all day without tiring. All joints ball bearing with ball bearing shearing head. The equipment includes four sets of knives fully guaranteed. **\$11.50** anted. Price . . .

If your dealer hasn't it, send \$2.00 and pay balance C. O. D.

ROOFING

Per Roll 108 Sq.ft 62¢

Almost unbelievable—but true just the same! This unheard of low price for genuine wool-fibre, asphalt-saturated rubber surfaced roofing would be impossible for any other firm to quote—it's only possible with us because we have a capital of ten million dollars which enables us to buy raw materials in larger quantities and at a lower price than any one else. We save both ways—buying and manufacturing—and give our customers the benefit of this big saving. This is the strongest proof we have ever been able to offer in our more than 20 years of business history that we are the **World's Greatest Price Wreckers.**

We established that reputation at the outset of our career when, under the name of the Chicago House Wrecking Co., we started out buying up Bankrupt, Receivers' and Sheriffs' Sales. We began smashing prices then and we've been smashing prices ever since! Give us the opportunity to do so and we will prove to you just as we have proved to thousands of others all over the country that

We Save You 1/3 to 1/2 on any kind of roofing you can furnish your material for re-roofing your house, barn, sheds, granary, poultry houses, etc., and also furnish the siding, conductor pipe, eaves trough and everything needed—all at a big saving over what you would pay if you bought elsewhere. It doesn't make a bit of difference what kind of roofing you have in mind to buy—whether Ready Roofing or Galvanized Steel—flat, corrugated, V crimped, standing seam, beaded ceiling or brick siding—we can supply you every need with just the kind you want. Our low freight prepaid prices will amaze you. Send your name and address and we will prove that our prices are the

Lowest Prices in History of Roofing Business

You can order direct from this advertisement with perfect safety. Our legal binding guarantee, backed by our \$10,000,000 capital fully protects you. If for any reason you are not satisfied with your purchase you can return it to us and we will promptly refund every cent and pay freight both ways. Here are some items you may be needing right now. If so, don't hesitate to send in your order. We guarantee complete satisfaction.

CORRUGATED STEEL Roofing, Per Square Ft. 1 1/4¢

Here is a fine opportunity to save big money on corrugated steel roofing. We are pricing it as low as 1 1/4¢ per square foot—a price heretofore unknown. Be sure to write for free samples.

GALVANIZED STEEL Roofing, Per Square Ft. 2 3/4¢

Highest grade, specially coated, made of specially prepared steel of superior quality. Practically rust-proof and will last a lifetime. Full size sheets. Besides corrugated, it comes in "V" crimped, standing seam and brick siding. Priced as low as 2 3/4¢ per square foot—an unheard of price for this grade. Send for free samples.

Sensational Roofing Sale

At Amazingly Low Prices

Settle this roofing question right. The only way you can settle it right is to send at once for our big assortment of **free roofing samples**—all kinds—**freight prepaid** prices and a copy of our free Roofing Book. This is the most valuable and reliable roofing guide ever published. **You need it.** Write your name and address on lines below and mail. We'll understand and send book and samples at once free.

DE LAVAL Cream Separators

are not the mail
order or agricultural
implement kind

THERE ARE SEVERAL KINDS of cream separators, but De Laval Cream Separators are of a kind that puts them in a class by themselves.

DE LAVAL CREAM SEPARATORS are made by the best engineers, with the best equipment, from the best materials, by the best workmen, and in the best shops of the kind in the world, all devoted solely to the production of the best cream separator.

THEY ARE NOT THE KIND OF separators mail order houses contract for wherever they can be made cheapest, nor the kind that agricultural implement concerns manufacture along with corn shellers, plows, mowers, reapers, threshers, gasoline engines, cow milkers and the like, none of which begins to compare in mechanical quality or refinement with what the cream separator should be.

DE LAVAL CREAM SEPARATORS are the kind 98 per cent of the creameries use, where any loss in quantity or lack in quality of product means business ruin, as it always has ultimately to every creamery that did not replace an inferior separator with a De Laval.

PRECISELY THE SAME KIND OF differences exist in farm as in factory separators and precisely the same reasons apply to the use of cream separators on the farm as in the creamery, though they may not make or break the farmer as they do the creameryman where the farmer has other crops and products upon which to rely.

THE DIFFERENCES BETWEEN De Laval and the mail order and agricultural implement kind of cream separators are fully set forth and made plain in a De Laval catalog to be had for the asking, while the machines themselves best tell their own story placed side by side, and that every De Laval local agent is glad to afford any prospective buyer the opportunity to do.

If you don't know the nearest De Laval agent, simply address the nearest main office as below.

Nothing to Be Surprised At
"That great cat show was certainly a success."
"Well, it would be strange if a cat show didn't come up to the scratch."

ADVANTAGES OF SHIPPING HIGH TESTING CREAM

BUTTERFAT does not sour nor lose its quality quickly. It is the milk mixed with it which so soon sours and spoils. Consequently, the more butterfat there is in your cream and the less skimmed milk, the longer the cream will keep and preserve its fancy quality, if kept clean and cool.

We advise our readers always to separate their cream, so as to test about 40 per cent in butterfat, for the reason that such high testing cream not only keeps nicer and stands transportation better, but is more economical to ship.

A gallon of cream will weigh about 8 pounds. Twenty per cent of 8 pounds is 1 2-3 pounds, so that a gallon of 20 per cent cream will contain approximately 1 2-3 pounds of butterfat.

Forty per cent of 8 pounds is 3 1-3 pounds, so that a gallon of 40 per cent cream will contain about 3 1-3 pounds of butterfat, or twice as much as a gallon of 20 per cent cream.

It costs just as much to ship a can of 20 per cent cream as it does to ship a can of 40 per cent cream, but a can of 40 per cent cream will contain twice as many pounds of butterfat. Therefore, it costs just twice as much, per pound, to ship butterfat in 20 per cent cream as it does to ship it in 40 per cent cream.

When you ship 20 per cent cream you ship 80 per cent skimmed milk. Creameries do not buy the milk, but it is valuable to you for feeding hogs, calves and poultry. Every pound of milk shipped to them costs just as much per pound to ship as a pound of butterfat does.

We call your attention to the high prices hogs and poultry bring, and earnestly recommend that you separate your cream to test as high as possible in butterfat, so as to retain as much skimmed milk at home as you can, for feeding purposes.

The moral is, keep at home just as much skimmed milk as possible, and ship all the butterfat you can.

HOGS IN THE CORNFIELD

Well, here's to you again, Mr. Editor. Old Farmer Smith has scanned that 'ere Contributors' page every issue for some bumper crop in 1913. I don't care a pickle for that prize, but I do like to read about the crops. You know we had a hummer of a corn crop in Iowa this year. Maybe some of you will say I'm getting lazy, but I just broke up that old clover pasture and planted it to corn and when it was ready to feed I just opened up a gate and called the hogs, and when the last of the twenty-five shoats and two old sows got in I closed the gate and said, "Go to it." I left a runway for them to come to water, folded my arms and watched them fatten. Well, that five acres fitted them for market. The shoats were six and one-half months old and averaged 225 pounds apiece. My neighbors would stop and in a neighborly fashion call, "Say, Mr. Smith, your hogs are in the corn. 'Well,' I would say, 'It's Smith's hogs and Smith's corn; can't you let 'em eat?'" You that's interested in hogs know the price and I can tell you they brought me a good deal more than this writing will, and I didn't have to bend my old back and husk every ear and carry it in a bushel basket three times a day to a lot of squealing hogs. Shucks, why didn't I think of it before!—F. S., Iowa.

DOUBLES MONEY ON SHEEP

By far the most profitable thing we ever did was to buy a bunch of sheep. They cost us sixty dollars early in the spring. At shearing time the wool brought us \$28.00. We had a forty-acre woods pasture in which they grew fat through the summer, giving us no trouble whatever and no expense.

We sold them in the fall for \$92.00,

making us just double what we paid for them. Frances H. Brown, Kit Carson, Colo.

Only \$2 Down One Year to Pay!

\$24 Buys the New Butterfly Jr. No. 1. Light running, easy cleaning, close skimming, durable. Guaranteed a lifetime. Skims 95 qts. per hour. Made also in four larger sizes up to 5 1-2 shown here. Buy With Your Neighbors—Save Fence Cost

Write us for special low prices on co-operative buying of Empire Fences. Get your neighbors to join you in ordering. We will quote you lowest wholesale factory prices. Joseph Stangle, Constantine, Mich., writes: "Empire fence can't be beat. My fence, put up seven years ago, as good as the day I got it. Expect neighbors to go in with me to make up big orders." Ask for **FREE BOOK** of facts about fence quality; illustrates and describes
No. 9 Empire and Empire, Jr.
Open Hearth Steel, Big Wires, Heavily Galvanized
This book will show you why the No. 9 Empire and the Empire, Jr., made of Open Hearth Steel, great big wires, galvanized as a wire fence should be galvanized, will outlast any soft Bessemer steel fence ever made. It illustrates our big wires—the strong Empire will show you why Empire fences are proof against any and all kinds of weather, rust, rot—proof against the hardest use—why they do not sag, why they stay hog-tight and cat-tight as long as they are in use—why they are by far the least expensive fences to buy in the long run.
Farmers, everywhere, are investigating fence quality. Users insist on knowing the quality underneath, just as they know how to judge a horse. You cannot fool an experienced buyer with an old horse doped up—polished up—to look like a good horse. You cannot fool an experienced buyer with a poor fence doped up to look like a good fence.

Bond Steel Post Co., 61 Maumee St., Adrian, Mich.

Sanitary Floor with Concrete Manger and Swinging Stanchions

Sanitary Floors for the Dairy Barn

IN THE VOLUNTARY MOVEMENT of farmers for better milk at better prices the first step toward improvement is the making of the barn more sanitary by laying concrete floors. The method is so simple than any man can do his own work. The cost is so small and the cash returns are so great that the floors soon pay for themselves in preventing the breeding of flies, in the saving of liquid manure, in the reduction of labor and in the increased flow and improved quality of milk. The plan described below is for a barn in which two rows of cows stand heels toward each other, with a driveway between. It is easily modified to the opposite arrangement. Likewise the method is adaptable to both old and new barns.

Planning and Grading the Floor

For average conditions lay out the stalls on 3-foot 6-inch centers and 4 feet 6 inches in length from a 6-inch manger wall to drop gutter. The manger is 2 feet 6 inches wide at the top and 2 feet at the bottom, with one face sloping up to the feed-alley floor. The depth is 7 inches, measured from the stanchion setting, and 8 inches from the alley floor. The feed alley is 4 feet 6 inches wide. The drop gutter has a width of 18 inches. It is 8 inches deep gauged from the stall floor, which is 2 inches higher than the 8-foot driveway. For establishing grade lines a carpenter's spirit level (or a water level) and a chalk line are very helpful.

To prevent possibility of the floor settling, remove all manure before grading the surface of the earthen floor. Carefully tamp back the dirt around water pipes and the drains which carry waste water and liquid manure to the water-tight concrete manure pit. Do all filling as long as possible before building the concrete floor. As a foundation for the stall floors proper, place a 6-inch thickness of coarse broken stone or screened gravel to keep the floor from direct contact with the ground. Since the stall floors are of prime importance, it is well to make them first. During this operation the unpaved driveway and alleys can be used as working space. Then finish, in order named, the feed alleys, the driveways, the mangers and lastly the gutters.

Mixing and Laying the Concrete

For the plan given, 5 feet 6 inches from the center line of the driveway stake on edge (and to line and grade) a 2 by 12-inch plank, to serve as a form for the stall floor at the gutter. Likewise set a similar board, 5 feet distant, to mold the 6-inch manger wall and stanchion setting. Bear in mind that the stall floor has a slope of 1 inch toward the gutter and that the stanchion setting rises 7 inches above the stall floor. Drainage for gutters and mangers will be provided by sloping their concrete bottoms.

Proportion the concrete 1 bag of Portland cement to 2½ cubic feet of sand and 5 cubic feet of crushed rock, or 1 bag of cement to 5 cubic feet of

clean pit gravel. At one operation lay the full 5-inch thickness of the stall floor and finish three stalls the same as one section of sidewalk. No surfacing mortar is needed. For setting patented stall divisions, follow the manufacturer's directions; for home-made divisions, make mortises by tamping the concrete around greased tapering

wooden cores, which are withdrawn as soon as the concrete stiffens. A wooden float is best for finishing the floor. A steel trowel yields a surface entirely too smooth, and such a finish should always be roughened by brushing with a stable broom.

While the concrete of the three stalls is still soft, mold the stanchion setting (6 inches thick) upon it. As forms use the projecting 7-inch height of the 2 by 12 piece already in place and two 1 by 6-inch boards toe-nailed together so as to provide another 7-inch height and a bearing plate to rest on the green concrete. These forms may be dish-shaped for swinging stanchions.

Sectional View of Floor and Stanchions

by applying a 1 to 2 cement-sand mortar immediately after removing the forms.

Caring for Cattle and Floor

Regardless of the kind of floor, bedding of straw or litter is an absolute necessity; it keeps the cow clean and absorbs the valuable liquid manure. If the help can not be depended on to bed the cows properly, it is advisable to use a removable wooden grating or platform. Cork bricks also give satisfactory results, but are somewhat expensive. They are set in a 2-inch depression in the floor and are held in position on all sides by the concrete acting as a curb.

The Dairy Cow and Her Products

(Continued From Page 7)

vice known as the printer can be purchased for molding the butter in this form, and it is not expensive. Each pound package should be wrapped in a good quality of parchment paper, which can be purchased locally or can

Print Mold and Paddle

be had from dealers in dairy supplies. Another form of package that is often used is round fibre boxes, which hold various quantities from one to five pounds. Where larger quantities of butter are made larger packages, such as five to ten-pound pails and ten-pound tubs, are to be recommended.

A Neat Butter Package

Little difficulty is experienced by those living near a city of any size in finding sale for any quantity of well-made farm butter, provided it is of the right quality and can be supplied regularly. The woman on the farm who has only a small quantity to sell, and that at irregular intervals, can not expect to command the best price.

TAKE OFF THE HORSE'S COAT ALSO

Do you go at the spring work with your overcoat on? Of course you don't—Coats are a burden—you even roll up your shirt sleeves. Then how can you expect the horses to show proper energy under the hot sun with the same heavy coats on that they have worn all winter and which hold the wet sweat and dirt? Clip them before the work begins with a

Stewart Ball-Bearing Clipping Machine

They will get all the nourishment from their feed—be healthier and look better. They will dry off quickly, be more easily cleaned and feel better generally—that means work better. The Stewart Machine is not an expense—but a highly profitable investment. It turns easily, does more and closer work than any other machine—can't get out of order. Gears all file hard and cut from solid steel bar—protected and run in oil. Includes 8 feet new style easy running flexible shaft and celebrated Stewart's Single-Tension Clipping Head. The only machine that can be used without change for horses, mules and cows. You can make money clipping your neighbors' horses while yours will do better work. Each machine guaranteed. If it doesn't give perfect satisfaction, return it and get your money back. Complete from your dealer at **\$7.50**. If he can't supply you send \$2 and we will ship one C.O.D. for balance.

Stewart No. 9 Ball Bearing Shearing Machine

will more than pay for itself the first season. Any boy can run it all day without tiring. All joints ball bearing with ball bearing shearing head. The equipment includes four sets of knives fully guaranteed. Price **\$11.50**. If your dealer hasn't it, send \$2.00 and pay balance C. O. D.

Chicago Flexible Shaft Co.

ROOFING

Per Roll 108 Sq.ft 62¢

Almost unbelievable—but true just the same! This unheard of low price for genuine wool-fibre, asphalt-saturated rubber surfaced roofing would be impossible for any other firm to quote—it's only possible with us because we have a capital of ten million dollars which enables us to buy raw materials in larger quantities and at a lower price than any one else. We save both ways—buying and manufacturing—and give our customers the benefit of this big saving. This is the strongest proof we have ever been able to offer in our more than 20 years of business history that we are the **World's Greatest Price Wreckers.**

Sensational Roofing Sale

At Amazingly Low Prices

We established that reputation at the outset of our career when, under the name of the Chicago House Wrecking Co., we started out buying up Bankrupt, Receivers' and Sheriff's Sales. We began smashing prices then and we've been smashing prices ever since! Give us the opportunity to do so and we will prove to you just as we have proved to thousands of others all over the country that on any kind of roofing we can furnish you material for re-roofing your house, barn, sheds, granary, poultry houses, etc., and also furnish the siding, conductor pipe, eaves trough and everything needed—all at a big saving over what you would pay if you bought elsewhere. It doesn't make a bit of difference what kind of roofing you have in mind to buy—whether Ready Roofing or Galvanized Steel—flat, corrugated, V crimped, standing seam, beaded ceiling or brick siding—we can supply you every need with just the kind you want. Our low freight prepaid prices will amaze you. Send us your name and address and we will prove that our prices are the **Lowest Prices in History of Roofing Business.**

You can order direct from this advertisement with perfect safety. Our legal binding guarantee, backed by our \$10,000,000 capital fully protects you. If for any reason you are not satisfied with your purchase you can return it to us and we will promptly refund every cent and pay freight both ways. Here are some items you may be needing right now. If so, don't hesitate to send in your order. We guarantee complete satisfaction.

CORRUGATED STEEL

Roofing, Per Square Ft. **1 1/4¢**

Here is a fine opportunity to save big money on corrugated steel roofing. We are pricing it as low as 1 1/4¢ per square foot—a price heretofore unknown. Be sure to write for free samples.

GALVANIZED STEEL

Roofing, Per Square Ft. **2 3/4¢**

Highest grade, specially coated, made of specially prepared steel of superior quality. Practically rust-proof and will last a lifetime. Full size sheets. Besides corrugated, it comes in "V" crimped, standing seam and brick siding. Priced as low as 2 3/4¢ per square foot—an unheard of price for this grade. Send for free samples.

Big Assortment Samples Free

Settle this roofing question right. The only way you can settle it right is to send at once for our big assortment of free roofing samples—all kinds—freight prepaid prices and a copy of our free Roofing Book. This is the most valuable and reliable roofing guide ever published. You need it. Write your name and address on lines below and mail. We'll understand and send book and samples at once free.

Advertising the Products of a Modern Poultry Plant

By W. Clement Moore

ADVERTISING is the life of trade, and it is just as essential in the poultry business as anywhere else. You must devise ways and means of making your poultry, or poultry products, known to the public, and you must convince the people that you are able to offer eggs or poultry of merit, and prove that you have reasons for such claims.

This can be done by continuous publicity. If you are raising poultry mainly for the purpose of selling eggs for hatching, then your advertising matter should be confined mainly to that subject. This is not a difficult task for any one accustomed to writing up good advertising matter. Your local printer or newspaper editor will no doubt give you sound assistance along this line of work.

In selling eggs for hatching purposes you should have printed a four or eight-page folder in which the care and attention given to your poultry should be described and explain why this aids in developing strong, healthy

birds and correspondingly healthy eggs.

In addition to the fact that good care of hens is necessary to the production of healthy eggs and chicks, you may also dwell upon the results from the eggs which you have previously sold. Secure testimonials wherever you can from those who have purchased your eggs and having placed them under good hatching conditions, secured good results from them. Get permission from such people to publish their letters or statements and then print them in your booklet.

The prime object of printing such a folder or booklet to advertise the poultry business, is to present to the possible buyer who lives at a distance from your plant, all the convincing facts and arguments which you would use if he came to you personally. If you have this thought in mind when you prepare your booklet you will have no difficulty in writing copy that will bring you the business.

The size of the booklet should be about three by six inches, so it will fit an ordinary business envelope. It should also contain one or more illustrations of your plant, some of your birds, your home, a setting of eggs, or any other attractive feature connected with your plant. These illustrations are very important, especially if the pictures are carefully taken and the engravings well made.

Finally you should select a good quality of paper and command your printer to do good work. It will pay better to spend 50 cents or \$1 extra on good work and good stock than it will to pay less for an unsatisfactory job. The cost of 1,000 eight-page folders, envelope size, should not exceed \$10.00, and if they are properly distributed they will pay for themselves fifty times over.

Newspaper and poultry periodical advertising will also be found profitable, if good and well written copy is used.

MY EXPERIENCE WITH TURKEYS

First of all I did not attempt to raise prize winners from scrubby stock. Last year I raised 21 turkeys from two hens. I have thoroughbred mammoth bronze turkeys. I do not keep the young poulters penned as so many people do, but gave them free range.

When the hens wanted to set, I gave to each about eighteen or twenty eggs. When the turks hatched, I let the hen take them after they were three days old, always being sure to get them up and feed them at night until they were large enough to fly into the trees to roost.

I sold my turkeys at about Christmas time at an average price of \$2.53 each. My best brought \$5.22, at 14½¢ per pound. It was the best turkey shipped from our station, weighing 36½ pounds.

I kept three of my choice hens for this season's breeding.—Mrs. Lizzie VanMeter, Kansas.

POULTRY PICKINGS

Eleven eggs are enough for setting these early days.

A hen is worth exactly what she will weigh and what she will lay.

Turkeys will soon begin laying regularly. Keep watch on them.

Get things in readiness for a good clean-up as soon as warm days come.

It takes a healthy chick to make headway through the blustery March weather.

A successful poultry industry has but two legs to stand on—work and brains.

Young chicks ought never to be cold. Cold robs them of vitality as nothing else can.

Look after the breeding hens carefully. Set no eggs from hens that are not thrifty.

If your ducks have been properly wintered and fed, you should be getting duck eggs right along.

Incubator Chicks die by hundreds with white diarrhoea. We save them. Send addresses of ten people using incubators. Get free details how we hatched, raised and fed fourteen hundred. **ALVA REMEDY CO., Alva, Oklahoma**

International Harvester Oil and Gas Engines

Successful farmers are no longer asking "Shall I buy an engine?" They have passed that point and now inquire "Which engine shall I buy?"

You will be sure that International Harvester engines are the most satisfactory when you study features like the following: Detachable valve guides, offset cylinder head, fuel pump, split hub fly wheels, extra large intake and exhaust valves, etc.

Ask the men who have used I. H. C. engines. That is the best test. Study the engines yourself at the nearest dealer's where International Harvester engines are sold. They are made in all styles, and range in size from one to fifty horsepower. They operate on low and high-grade fuels.

Write for our interesting and instructive catalogs, and when we send them we will tell you where the engines may be seen. A postal will do.

INTERNATIONAL HARVESTER COMPANY OF AMERICA (Incorporated) **U S A** Chicago

603 Chicks From Her RAYO

"I counted up my hatching record for the summer and find I hatched 603 strong, hearty chicks. One hatch was 100%. Who is going to beat that?"—**Dora Farnsworth, Penasa, Iowa, August, 1913.**

Mrs. Farmer, Listen to Me!—Why Fool with Setting Hens?

Is there anything more exasperating than an old "Settin' Hen"? How foolish it is to try to raise chickens "by hand," when the

Sure Hatch Incubator

is waiting; ready to do the work easier, cheaper, better—at any time, January, March or June!

I build a good, practical hot-water heated incubator, that will hatch even if the room is at freezing temperature.

I'll send you **FREIGHT PAID ON 60 DAYS' TRIAL** You can make a hatch and prove its success to your own satisfaction.

We are reliable; have been in business sixteen years, and back our machine with a strong 5-year guarantee.

You should have poultry on the place to pick up feed that would otherwise go to waste. The Sure Hatch Incubator will enable you to hatch chicks in winter, to get the highest early Spring prices. Machine will be shipped to you by first fast freight the day your order is received.

A postal card brings you by return mail my Big Free Catalog, giving full description of Sure Hatch Incubators and Brooders; also prices of the different sizes.

Frank Hammond, Pres. & Mgr. SURE HATCH INCUBATOR CO. Box 28, Fremont, Nebr.

The Most Valuable Poultry Book OUT! My U.S. Poultry Book is a wonder. No other book like it ever printed. Not a catalogue; but a book of new and reliable facts on Poultry Raising proven and endorsed by U. S. Government Poultry Experts. It isn't for sale. You can't buy it, but I'll give it to you free with a Sure Hatch Incubator. Book worth \$10 to you.

SEE WHAT OTHER Women Have Done "I hatched 96 chicks out of 100 eggs, and it is my first incubator and the first hatching I ever did. I like your Sure Hatch Incubator fine." **Mrs. R. Raschel, Gladstone, N.D.** "I have one of your 150-egg Sure Hatch Incubators and the longer I use it the better it hatches. I took off a hatch yesterday of 147 chicks from 155 eggs. Am well pleased with my machine, after 8 seasons use." **Mrs. Anna P. Hill, Hanford, Cal.**

Get Your Cream Separator NOW

Most Women Prefer
the New Butterfly;
It's so easy
to clean.

Here is the opportunity you have been waiting for—a chance to get one of these big-capacity, light-running, easy-cleaning, close-skimming New Butterfly Cream Separators without taking the money out of your pocket.

By paying only \$2 down, you can get the biggest machine we make, use it 30 days free, then if you decide to keep it pay us the rest of our low factory-to-farm price (only \$24 and up) in small, easy installments. You can make these payments monthly out of the extra cream profits which the machine will save for you. You buy direct from the manufacturer and save half. You have the benefit of this great labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. Get your separator NOW at factory prices and on terms so easy you won't feel the cost at all.

\$2 DOWN
Only
One Year To Pay

New Butterfly Cream Separators

will make you \$10 to \$15 a year more profit from every cow you own. They are handsome, high-grade, durable machines. The most modern and convenient separator you can buy. No other separator costs more to make, has so many patented improvements or gives you as much value for your money. We will prove this on your own farm, or no sale. Thousands are in daily use all over the United States. Read the letter at right.

30 Days' Free Trial
Lifetime Guarantee

Fill out the coupon below—mail it to us right away for free catalog folder. Get our big special offer on the five sizes of machines we make, so you can pick out the one that exactly suits your requirements. We will ship it to you on our easy payment terms of only \$2 down and let you try it 30 days on your own farm. When the 30 days are up, if for any reason you are not pleased—if you don't prefer the New Butterfly to any other separator you ever saw or used—just return the machine to us. We will pay the freight both ways and refund your first payment. You won't be out a single penny.

Every New Butterfly Separator is guaranteed against defects in material and workmanship, regardless of how many years you have used it. No other separator manufacturer will give you this signed lifetime guarantee.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

INVESTING YOUR PROFITS PROFITABLY

(Awarded First Prize of \$3)

For the past year I have been reading with keen and undiminished interest the letters from your country contributors discussing their most profitable crops. While doing so, I've often wondered how many of the writers ever thought to invest the proceeds of one of those highly profitable crops in such a way that the entire family could have lasting benefit and enjoyment from the profits obtained, and remember with pleasure that it all came from some particular crop.

The crops paying the largest profits on my farm are alfalfa, potatoes and sugar beets in rotation, but in place of telling how I have made them profitable, and how much profit each one pays me, I will relate how I invested \$120 of the profits of one of the crops in a manner that returns me at least 100 per cent every year. I built a water tank of lava rock, concrete, and Portland cement. This tank has 20 inch walls, with an inside course of concrete, plastered with a mixture of equal parts fine sand and cement. The inside of the tank measures 6x6x7 feet, and holds 1,800 gallons. It is 16 feet to the top, having a room underneath for a gasoline engine should I need one, but at present I find a windmill quite satisfactory.

I have a drinking trough for stock 2x2x10 feet, always full of water; no back-breaking pumping to do. A three-quarter inch pipe supplies the water to the hydrant at the barn, also to the house. No carrying water from well to kitchen in our house. I have used this tank for two years. Water never freezes in winter, nor grows warm or stale in summer. Time is saved, and labor lessened. There's a pleasure in setting machinery in motion which without more attention delivers water where it is needed. There's no pleasure in assisting a pump handle in its ups and downs with your arms and back.

Running water in the kitchen helps preserve the finest blooms God ever designed, the roses in a woman's cheeks. What a step-saver, especially on wash day! And that reminds me, a few dollars spent for a good power washing machine is a profitable investment. I've served my time with a hand-power machine, so last fall we invested \$60 of another profitable crop in a power washer and wringer and a gasoline engine. The washing is now done with a quart of gasoline. Mother feels in high spirits—and everybody is happy.

It is conveniences that make up a worth-while country life. With effort rightly placed, life on the farm can be made far superior to the best your cities can give its denizens.

Making a profit is only a part of the pleasure of producing the profitable crop. The end of all profit is in our pleasures obtained from them. Investing profits profitably is the real thing.—C. C. Sjoström, Blackfoot, Idaho.

RAISES FINE FRUIT IN WASTE PLACES

(Awarded Second Prize of \$2)

Several years ago we had unused or waste space in the rear of our suburban plot. After some study and investigation I filled the space by planting thereon several varieties of the Oriental, or Japanese plum trees, choosing largely the hardy, productive variety

known as the Abundance. In a short time they came into bearing and all varieties bore an abundant crop, the limbs being fairly weighted down with clusters of the beautiful fruit. A variety called Red June ripened first, and although slightly smaller than the others, their excellent qualities and small, freestone pit made them a prime favorite with housewives for canning, preserving and making sweet pickles. We never fail to put up an abundant supply of them both for home use and for market, every year they bear. Their one bad feature is their early blooming propensities, making them subject to damage by late spring frosts which sometimes occur to the injury of the crop of this variety.

The Abundance is a large plum of lemon yellow color, and very heavy bloomers. The Burbank is a bright cherry red, and ripens a little later than the Abundance. This variety has a lilac bloom and the trees are fairly covered with the blossoms. One variety produces a bluish crimson plum with a deep red, meaty flesh that is unrivaled for its eating qualities, and for jelly making. Still other trees bear pale yellow fruit, slightly blushed with red. In fact, we have a magnificent variety of different colors, and by using them in combination we soon found each kind looked so attractive, customers would want some of each to "taste the difference." The first year we had them in any quantity and we shared them with the neighbors, which proved to be all the advertising necessary to dispose of all the larger crops to follow. The more we sold the farther and faster their good qualities spread, and we frequently had customers to come a distance of a dozen miles, who bought from 10 to 25 gallons at a time. We gave those who desired the privilege to pick their fruit, charging them 10 cents per gallon. When we pick, we charge 5 cents per gallon extra. Liberal, fair treatment, combined with the fine qualities of the fruit, made each customer a permanent patron, and they return for supplies year after year.

The older trees are now showing age, but we have arranged to have younger ones replace them. The trees begin bearing the second year after planting and require little care. The chief attention given is to place supports under the bending boughs loaded to the breaking point with fruit. All varieties are vigorous growing, ornamental trees, very attractive. Some have light green foliage, others a rich bronze; they are the earliest of bloomers, and their masses of snowy blossoms send a spicy, delightful fragrance through the air. They are not so well adapted to sections subject to late spring frosts, yet one crop in its abundance and value makes up for a year or two of failure. The trees grow rapidly, form a dense shade, and are splendid for a poultry yard. The fruit, being prolific and delicious, a prime favorite with all who come to know it, commands a fair price, and meets with a ready sale.—L. A. Barnes, Mt. Washington, Ky.

A WOMAN'S WINNING WAYS

(Awarded Third Prize of \$1)

"Fixing to get rich are you, Ella?"

With this remark Nora Nelson leaned over the fence where pretty Mrs. Ella Grayson was working a peapatch—a mixture of the old time varieties, "Black-eyed" and "Poor Man's Relief."

"No, not rich in Virginia, for we have to sell at the buyer's price instead of our own; but let me tell you, I am going to do my best cultivating this spot, and if it produces anything worth saving I am going to get something for it."

"I hope you will have success," sighed Nora, in the tone of "I know you won't have it, though."

The plot of land was a worn-out, thin acre and a half, typical of many in Virginia. In October before she had paid a boy fifty cents to break it with a double plow. As soon as this was done she persuaded her "always-too-busy-to-help-his-wife" husband to help her cover it with manure from stables, and then in February following it was again turned and lightly manured. The second week in May it was harrowed and laid off in rows 36 inches apart, and in these were drilled one sack of three-dollar fertilizer and with this the peas. In July and August with the aid of her little girl she gathered fourteen bushels of nice, dried peas and had as many as she wanted for the table until frost. The peas were extra clean and sound, and of these she sold thirteen bushels at three dollars a bushel. Labor expended was worth about two dollars, for they were picked in spare times, and she could have made not more than this at other things. Fertilizer cost three dollars, for the manure would have never been utilized at the time she utilized it any other way.

So deducting fifty cents for the hire of the boy, her own labor worth at most two dollars, and fertilizer, three dollars, from thirty-nine dollars, we have a net profit of thirty-three dollars and fifty cents all from a thin field worked during spare moments by a busy house-keeper.

"Canst thou go and do likewise?"

—Mrs Sue Rowler, Spring Mills, Va.

A PROFITABLE HOG PASTURE

My most profitable crop is a crop not generally appreciated. It is a pasture crop for swine, and consisted of Canada field peas sown as soon as we could work the ground in the spring, in March. We covered the peas about four inches deep, as they cannot stand

warm dry weather; on top of the peas we sowed oats at the rate of nearly three bushels to the acre, harrowed them in once; sowed five pounds of rape, harrowed again, sowed at the rate of seven pounds per acre of red clover, and harrowed again lightly. The amount of grazing such a pasture will afford is simply amazing, and the growth which swine will make on such pasture, supplemented with a half ration of concentrated feed, is not only astounding, but very profitable.

There is no doubt but this crop paid at the rate of better than fifty dollars per acre; and the benefit to the land far more than repaid the cost of seed and labor.

The pigs were undoubtedly our most profitable crop, but it was the crop of pasture that made them so.

Another profitable crop with us is rye and crimson clover sown at the last working of the corn and pastured through the winter. Also, we make use of soy beans in the same manner for fall pasture, and in every case, we not only get good monetary return, but at the same time leave the land better for the treatment.—W. W. Shay, Cruso, N. C.

Wanted the Other Kind

Lovesicker—Yes, darling, I would be willing to die for you.

TO PRODUCE GOOD SEED POTATOES

During the ten years from 1901 to
1910, inclusive, the average acre yield
of both Germany and Great Britain
was approximately 200 bushels—that
of the United States not quite 93 bush-
els. Of the many causes which op-
erate to produce a low average potato
yield in this country, poor seed is an
important one. The American potato
grower pays too little attention to his
seed potatoes. The European growers,
especially those of Great Britain and
Germany, pay very strict attention to
the quality and quantity of seed they
use.

The question of what constitutes
good seed is a vital one, and possibly
no two persons would fully agree in
every particular upon this point. Pure
seed from productive plants, not over-
ripe, uniform in size and shape, firm
and sound, with first sprouts, just
showing at planting time, if furnished
suitable cultural conditions will sel-
dom fail to produce a remunerative
crop.

Just as an instance of the value of
good seed potatoes may be cited the
case of T. E. Martin of West Rush,
N. Y. Mr. Martin maintains a seed-
selection plat from which all weak or
imperfect plants are rigidly removed.
At harvesting time the crop from the
selection plat is sorted into two grades,
"specials" and "selects." The specials
must weigh not less than twelve ounces
each, and furthermore, must be
true representatives of the variety
grown, which is exclusively the Sir
Walter Raleigh. The specials are used
to plant the seed plat the ensuing sea-
son and the selects to plant the general
field crop. The average production
on an eighteen-acre basis for the past
nine years has been 282 bushels per
acre. The highest seasonal yield dur-
ing this period was 417 bushels, and
the lowest 233 bushels. These yields
are being secured in a locality where
the general average is approximately
150 bushels per acre.

By far the simplest and most prom-
ising means of developing high-grade
seed potatoes is that of the tuber-unit
and seed-selection methods. In the
former a selection is made of well-
formed and perfect potatoes from the
seed bin before planting time. These
are quartered as dropped, a little space
being left between each set of four,
so that the grower can readily observe
any variation in vigor and uniformity
between the various units as planted.
By marking those which appear to be
uniform in size, vigor and type when
the plants are still in vigorous growth
the first step in selection has been
accomplished. At digging time the
product of each unit is separately har-
vested and a further selection made
for size, shape and smoothness. These
selected tubers should be numbered
with both field and unit numbers and
separately placed in small sacks of cot-
ton or burlap.

The final examination should con-
sist of notes on the number and weight
of merchantable tubers and their gen-
eral size, shape and smoothness. From
each of the units retained ten of the
best tubers should be selected for the
next season's planting. The ten se-
lected tubers will give forty plants for
study the next year. The further con-
duct of the work will consist in the
for field planting and the elimination
multiplication of the selected strains
of the weak plants.

In the hill-selection method the most
promising plants are marked during
the growing season and at harvesting
time only those which give greatest
promise are saved. Five tubers from
each hill selection should be saved and
planted the following season according
to the tuber-unit system as outlined
above. All that is needed for the work
is a collection of 12-inch garden labels,
a small pair of balances, a sufficient
number of suitable small sacks and a
safe place in which to store the se-
lected tubers until required for the
next season's planting.

BACK YARD GARDENING

Have you a fence, an old grape arbor
or an outbuilding where the sun shines
at least half a day? You can plant
something that will be pretty and also
produce several good meals during the
coming summer. Clean away all refuse
and spade a foot in width as near the
fence as possible. If the earth seems
sterile, spade in a small quantity of
manure. Get a package of pole or
climbing beans. Nothing can be grown
in so narrow a space so well as the
bean. Plant 3 or 4 beans in a hill and
make hills about a foot apart, and 8
or 10 inches from the fence or porch.
Drive a short stake into each hill, or a
heavier stake at each end of the row
and stretch a wire from end to end
other and place strings from these to
the top of the fence for the vines to
climb upon. Cover beans to a depth of
2 inches, and when up, draw the earth
up about the plants. Do not hoe while
plants are wet. These vines will be an
ornament and will hide ugly fences or
walls of sheds or buildings and make a
comfortable shade when near a porch.
The fruit is best gathered while tender
and used as a snap bean. The Scarlet
Runner has a beautiful blossom.—Mrs.
Lucy Lee, Cambridge, Mass.

Fruit Picking Ladder

The handy ladder shown
in the sketch is just the
thing for use among fruit
trees at picking time. It is
easily handled, does not
knock off fruit or break
branches, and is much safer
than the usual style of
ladder, for the pointed end
may be put in the fork of a
limb without danger of it
slipping sideways. Still an-
other advantage is that one
may reach in all directions
from it without fear of the
ladder turning. Both a long
and a short ladder of this
style will be found most
valuable in fruit picking.

THE CLIPPER

There are three things that
destroy your lawn—Dandelion,
Buck Plantain and Crab Grass.
In one season the Clipper will
drive them all out.
Your dealer should have
them. If he has not, drop
us a line and we will send
circulars and prices.

Locals reporting dues and fees of new members in states having an organized

factor in the economy of many a farm home. But eggs are on the free list now and wholesalers and storers are going to buy from foreign countries unless the American farmer will meet the price of John Chinaman, the Russ. and the thrifty peasants of Germany, Denmark, France and other countries. The New York Call says:

A half dozen big egg receivers have sent men to Russia, Denmark, Germany and France with instructions to pack eggs for the American market for next spring's storage.

The first consignment of Chinese eggs in the shell to reach America was landed in San Francisco last week. It consisted of forty cars of good eggs. The eggs averaged seven to the pound, while it takes eight American eggs to make a pound.

A Chicago operator last October disappeared suddenly without letting any one know where he was going. Backed up by plenty of capital, he went at once to Hongkong and proceeded to buy eggs and ship them to America. They were landed at an average price of 17 cents a dozen and sold as high as 27 cents, making a profit of \$1,000 or more on each car. In other words these forty cars made for this speculator about \$50,000.

Encouraged by conditions in China, he has ordered forty car loads of egg cases in knocked-down condition and sufficient fillers to pack at least 200,000 cases of Chinese eggs for American markets. In China there are but two public cold storage plants capable of carrying eggs. In the flush of the egg season in the country districts of China good eggs can be bought for 2 cents a dozen, and never is the price in the big markets over 6 cents a dozen. Boats equipped with refrigeration make the trip from Hongkong to San Francisco in fifteen days, so egg transportation is feasible.

The American speculator proposes to pack Chinese eggs in American cases and ship them to the Pacific Coast for storing. If these eggs cost an average of 6 cents in China they can be landed in San Francisco at a cost of 10 cents, which will be about 10 cents per dozen less than eggs cost last April to go into storage.

With European eggs flooding our eastern markets and Chinese eggs the western ones, the American farmer and his wife will naturally wonder what will be paid for the home product. Also the housewife who has not yet found that the dollar buys more than it did formerly is wondering whether eggs from Europe and China, via the storage route, will be cheaper than in past winters.

Also there is much complaint heard from farmers because of the lower-than-expected prices for the short crops of potatoes, corn, sweet potatoes and some vegetables. Growers of sweet potatoes in the south who expected to get good prices this spring, because of the general shortage of crops in the north, find the importations of vegetables and potatoes from foreign countries in supplying the deficiency and they fear they stand to lose heavily.

Many farmers who cribbed corn last fall, expecting to get 75 cents and up, are glad to get 45 cents to 50 cents this spring. Argentina farmers, or rather the speculators, are manipulating the small surplus of that country so that it means 20 cents a bushel less than our corn should sell for. This, on 1,000,000,000 bushels, is a loss of \$200,000,000 to corn farmers. Wheat has ruled the lowest in many years and potatoes are fully 20 cents a bushel lower than they would be on an exclusively domestic basis, as before

the new tariff law. The latest move to unsteady values of potatoes and make the situation more dazed was the removal of the embargo against Danish potatoes, on February 27.

And these conditions bring to the front another demand for farmers to get together in a nation-wide organization so they can demand and compel the repeal of the tariff law as it injuriously affects agriculture. We do not mean that the farmers' organization should go into politics, but farmers must be heard in the councils of the nation and they must put themselves in a position to back up their demands by a united front across the whole country. While ours is supposed to be a government of the people, by the people, for the people, we fear it will never be that again until the farmers are organized FOR BUSINESS and then, with their ability to co-operate, make their united demands for the repeal of bad laws and the enactment of good ones for agriculture. And any law that is good for agriculture and the farmers must be good for ALL THE PEOPLE.

Our Idaho members have taken the right step, as shown by the following resolution:

Resolved, That a legislative committee, consisting of three men, be appointed by the board of directors. That the duties of the committee shall be to look after all matters of legislation as affect the interests of the members of the Farmers Society of Equity. We further recommend that our members support for the legislature only such candidates as shall pledge themselves to vote for the Destination Weight Bill, and a bill that will enable this Society to purchase coal from any company in Idaho that shall be mining or shipping coal into the state.

And now Congress proposes to investigate the grain exchange. Representative Manahan charges, among other things, that elevator men, by selling to themselves grain that they held as agents of the farmers, defraud the wheat growers of the Dakotas and Montana alone out of \$20,000,000 a year. Samuel H. Greely, formerly a member of the Chicago Board of Trade, told the investigating committee that the Chicago public warehouse monopoly fixed the grain prices for the world. The Chicago board, he declared, often dealt in 25,000,000 bushels of wheat a day, while the receipts at Chicago were about 25,000,000 bushels a year.

A dispatch from Washington is to the effect that the Chicago Board of Trade welcomes investigation and urges a deep probe into the "pit." Officers of the board deny that there is even a possibility of a monopoly and they claim "the present system of marketing farm products is the best that human ingenuity has yet evolved." "Trading in futures," they said, is the "backbone of the system—the method that made it possible to give the grower a market for his produce every day." The president of the board argued that as the wheat crop was harvested in ninety days, while its consumption extended over twelve months, the members of the board of trade were necessary to carry the crop until the consumers want it. This was done

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

One of our exchanges says:

Parents, and especially the fathers, are "standing in their own light" if they do not encourage the boys and help them to become interested in farm work. The boys should be encouraged to join the corn clubs and the fathers should give them every opportunity to fully develop the acre and make the best yield possible. The boy deserves to have an interest in the work and should be encouraged to develop the best that is in him.

This impels us to remark that notwithstanding the low prices for most farm crops and the high cost of living, advice to the farmers remains as cheap as ever.

A short time ago the papers were full of the accounts of the great wealth produced on the farms in 1913, equaling ten billion dollars. A Michigan farmer, who has a 45-acre fruit, grain and stock farm, figured the problem out for himself and he found that his PROFITS were minus \$95.50, and that besides being in the hole that much, his taxes have been raised, which is a further permanent handicap. He asked: "What's the use of raising a crop if you can't cash it in because the speculators head you off from the market?"

And others have been figuring, too. Instead of the number of abandoned farms becoming less they are increasing more rapidly now than at any time before. The constant call is for more production and more help on the farms, yet of the 387,495 foreign men who came to the United States in 1913,

and who had been either farmers or farm laborers at home, it is claimed only 2 per cent went on farms here.

They did not go on farms because the opportunities there did not appeal to them, but they went to the cities because the opportunities to make money are greater. Look over any directory of commission men, and brokers, in any of our cities, and notice how many names of foreigners there are. Many of them were producers in their own countries, but they were soon told, by their brethren who preceded them, that it is more profitable to stay in the cities and handle the stuff than to produce it in the country. Yet the native farm boy must be bribed to stay on the farm to produce the stuff for the foreigners to handle, store, manipulate and gamble in.

Last year was a short crop year, but, instead of the prices being high, to the growers, most of them are low, and going still lower. One of the plights the farmer finds himself in now is free trade in what he produces, while the tariff was left on most of the things he has to buy. The removal of the tariff has already reduced the price of every American farm crop, or it will when business gets in full swing under the new law. Take, for instance, eggs.

Nearly every family has had some income from eggs, and the cash from the sale of eggs has been an important

LET ME SEND YOU THE FINEST BUGGY BOOK EVER ISSUED

All I need is your address—it will cost you just 1c to send it to me on a postal card. I'll pay the postage on the book—and take my word for it, it's just the finest buggy book ever issued by anybody.

It's my "traveling salesman"—the only one I have—and by sending it at a cost of only a few cents' postage and dealing with you direct I cut out all profits, wages and expenses of jobbers, salesmen, dealers, clerks, etc. All this saving goes to you—that's why I can sell you a better buggy for less money than any dealer that ever lived.

This grand book, which I send you FREE, shows more buggies and harness, more carts,

runabouts, surreys, etc., than you can find in 20 dealers' stores. And my prices are actually as low as or even lower than the dealer himself has to pay—even if he buys a car-load at a time and pays spot cash for them.

And the book tells in detail how BOHON "BLUE GRASS" BUGGIES are made, how carefully they are inspected and tested before they are shipped out—tests that no "store buggy" at \$25 or \$25 of the same price could possibly stand. It also explains my great FREE 30-DAY ROAD TRIAL, my "satisfaction-or-money-back" offer, my \$30,000 guarantee bond placed in bank here for your protection.

Send for the book today. Don't put it off—you might forget. I'll be glad to pay the postage on it.

Shows You How
You Can Save
\$25 to \$50

The Up-to-date Farmer

knocking about his place finds a mighty big lot of pleasure in a chew of "PIPER". There's something about the open air, the stimulating life of the country, that calls for a rich, satisfying chew. And he uses

PIPER Heidsieck

CHEWING TOBACCO—Champagne Flavor

This is the tobacco that has that famous wine-like flavor. There's no other like it in the world!

PIPER Heidsieck is the highest grade of chewing tobacco on the market. It is made by experts who have agreed that the leaf used in "PIPER" is the ripest and mellowest that nature can

grow and the craft of man improve.

This selection of the best leaves from the cream of the world's crop gives "PIPER" its wonderfully satisfying and lasting taste.

Try chewing "PIPER" for a week or two and you will never use any other.

FREE Send 10c and we will send a full-size 10 cent cut of "PIPER" in a handsome leather pouch FREE to any address in U. S. The tobacco, the pouch and mailing expenses will cost us 20 cents and we are glad to spend the money to get you to try "PIPER" just once. We know that once you have started, you will become a permanent friend of this wonderfully wholesome, healthful and satisfying tobacco. In writing us please tell us the name of the dealer from whom you buy your tobacco.

Sold by dealers everywhere, in all size cuts from 5c up — also in handy 10c tin boxes

THE AMERICAN TOBACCO COMPANY

Room 1106

111 Fifth Avenue

New York City

through future trading and hedging orders. In the debate James Simpson of New York said that the removal of the duty on corn had already cost American corn growers \$65,000,000 through Argentine competition.

To which we remark that as long as farmers are unorganized, or wrongly organized, it matters very little to them whether the gambling boards of trade continue as at present, or under modified methods, or are wiped out entirely. The claim that future trading is the method that made it possible to give the grower a market for his produce every day is pure buncombe. Future trading is not practiced in hay, and there is a market every day; or in potatoes and some other crops, and there are markets for them every day. And the prices fluctuate just as much and the markets for the things not dealt in on the boards of trade are just as uncertain. The boards of trade could pass over night and we doubt whether prices of the commodities gambled in would be affected one way or another, as the result, a week later.

Relief from bad marketing conditions will not come through modified methods on the boards of trade, or abolishing them. But there will be no chance for the gamblers' game when farmers get together and maintain prices as steady on farm crops as they are on manufactured products. Then gambling will end, because uncertainty will be at an end.

Secretary of Commerce William C. Redfield said in an address recently:

The first and foremost influence of the tariff has been to add to our food supply. For example, take the last three months of 1912 and the last three months of 1913, of which I have spoken. In the former we imported 112,000 cattle; in the latter, 341,000. In the former we brought in 253,000 bushels of corn; in the latter, 4,450,000 bushels of corn. In the former we brought in 13,690 bushels of oats; in the latter, 13,230,000 bushels of oats; in 1912, about thirty-nine million pounds of rice, rice flour and rice meal; in 1913, 64,500,000 pounds. In the last three months of 1912 we brought in \$65,000 pounds of fresh meat; in the last three months of 1913 we brought in \$3,500,000 pounds of fresh meat. In the last three months of 1912 we brought in not quite 41,000 bushels of potatoes; in the last three months of 1913 we brought in 2,800,000 bushels of potatoes.

These facts can only be a matter of congratulation. The farmers of America have nothing to fear. Their efficiency is such already that they cultivate twenty-seven acres of land with the same force that is required abroad for from five to seven acres. One may confide with entire confidence in the ability of our agricultural community to produce its crops at a cost which will make prices remunerative.

I say it is of marked advantage to all of us that the shortage in our food supply

should be met by these importations from other people that had some to spare.

Behold how the glory of our country as an exporter of food to feed the world has passed! And now, instead of protection from cheap labor of foreign countries and their cheap products, so our own farms could be built up and our own production increased — instead of a sincere effort being made to raise food to feed our own people — our markets are taken away from our farmers and turned over to foreigners. Now, when we scale down the value of our farms 25 to 50 per cent and farmers work a half harder or longer, and are willing to accept 25 to 50 per cent less for their produce, we may have American markets for American farm products again under the present law. Or, if you don't want to work harder, and longer hours to produce cheaper, so you can regain our markets, or if you are not willing to take lower prices, and if you don't want to write 25 to 50 per cent of value off of each acre of farm land you have, come into the nation-wide Farmers Society of Equity movement and we'll soon have the protection to American agricultural products that they are entitled to.

One hundred million bushels of Argentina corn, or wheat, manipulated by the market sharks, can break the price on our corn crop of 2,500,000,000 bushels and our wheat crop of 750,000,000 bushels, 20 cents a bushel. A few million dozens of foreign eggs, or a few million pounds of foreign butter, can similarly be manipulated to reduce the price on all eggs and butter produce in this country 10 to 25 per cent. And this condition Secretary Redfield says "is a marked advantage to us all." Here we find some more of the reasons why the American farm boy must be appealed to to take pride in producing some prize crops to keep his thoughts away from the PROFITS in farming.

For our part we advise every farmer to connect himself with the local clearing house of the Farmers Society of Equity and encourage his sons to do the same as special members, and learn how to protect themselves in the prices of crops when produced. Farmers will find this many times the stimulus that a corn contest is, besides it will infuse into their minds a feeling of self-respect and independence that no mere work on the farm can, no matter how successful it is, the reward for which is set by other people.

Send the blank.

THE BLANK

Beautiful Sweet Roses

Everybody loves roses. They are easy to grow, and our sorts are free bloomers every month of the growing season. Nothing can equal or take the place of roses about the home. Start your roses this spring.

We have selected a choice collection and guarantee satisfaction. They will thrive vigorously in any ordinary garden soil and require little care. Read the description of these beautiful roses.

METEOR

For intense rich, velvety crimson color there is no other rose to compare with Meteor. A strong, sturdy grower, entirely hardy, it is always in bloom; fragrance is delicious.

RENA ROBBINS

The new yellow rose, which fills every requirement of the ideal garden variety. It grows to perfection in any soil and blooms continuously the entire season, bearing immense flowers of deep golden yellow, which assume rich creamy tints in their later stages of development. A rose of sterling worth; hardy everywhere.

LA FRANCE

Exceedingly sweet and handsome. An ideal garden rose, commencing to bloom soon after planting and bearing a great profusion of flowers all through the season. Flowers and buds are large and wonderfully beautiful, possessing the distinct delicious La France perfume; color is a lovely shade of soft, silvery pink.

By arrangement with our nursery, plants will be sent at the right time for planting in your locality. Full printed instructions sent for planting and culture.

Our Offer A collection of these six fine hardy roses sent for a new or renewal yearly subscription at 50 cents.

WHITE COCHET

One of the finest snow-white roses. Lustrous, rapid grower, producing a great abundance of large, full and firm, elegantly pointed buds, showing depth and richness as they open into magnificent pure white double flowers, possessing a distinct, exquisite fragrance.

ROSEMARY

A rose as beautiful and dainty as its name. Hardy, always producing strong, vigorous growth. Flowers practically all the time, having great masses of the most beautiful fragrant roses of rich silvery pink, exquisitely shaded.

EVERBLOOMING CRIMSON RAMBLER

The new production every one raves over, a real everblooming rose, Crimson Rambler. Plant grows rapidly, making shoots from eight to ten feet during the season, and covers itself with bright green, glossy foliage. Bright crimson flowers in great clusters are produced the entire season.

Yours Free Send a club of four for the price of three, and thereby get yours free. This is a liberal offer.

Up-to-Date Farming, Indianapolis, Indiana

Farmers Society of Equity, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

500 MEN 20 TO 40 years old wanted at once for electric railway motormen and conductors; \$60 to \$100 a month; no experience necessary; fine opportunity; no strike; write immediately for application blank. Address Box 35, Up-to-Date Farming.

PATENT ATTORNEYS

MEN OF IDEAS and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice Free. Randolph & Co., Patent Attorneys, Dept. 28, Washington, D. C.

IDEAS WANTED—Manufacturers are writing for patents procured through me; 3 books, with list 200 inventions wanted, sent free; advice free; I get patent or no fee. R. B. Owen, 49 Owen Building, Washington, D. C.

PATENTS THAT PROTECT AND PAY. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

POULTRY

SINGLE COMB Black Minorca, Northrup strain; great layers; eggs, \$1.50 per 15; \$7 per 100. Thomas E. Ebersol, Carrollton, O.

55 BREDS pure-bred chickens, ducks, geese, turkeys, Collie dogs; catalog free. Belgrade Poultry Farm, Mankato, Minn.

SEEDS, PLANTS, TREES

SEEDS WANTED—We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

200 STRAWBERRY PLANTS, choice 15 varieties, \$1.25; fall-bearing strawberries, 20¢; plants sent parcel post paid. Catalog free. W. H. Koell, Box 733, Hampton, Ia.

SEED POTATOES—Illustrated catalog 70 popular varieties free. Arthur Aldridge, Fishers, N. Y.

ALPACA SEED direct for farmers. Price and samples. Write J. L. Maxson, Buffalo Gap, S. D.

MISCELLANEOUS

FREE FOR SIX MONTHS—My special offer to introduce my magazine, "Investing for Profit." It is worth \$10 a copy to any one who has been getting poorer while the rich, richer. It demonstrates the real earning power of money, and shows how any one, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. H. L. Barber, 452. 20 W. Jackson Boulevard, Chicago.

SPORICIDE—Sure cure for smut in oats; guaranteed; simple to treat; sent direct by parcel post where we have no agent; booklet; agents wanted. Sporicide Chemical Co., Atlanta, N. Y.

\$100 IN GOLD for the best hatch in a Petaluma Incubator in the next four months; write now for full particulars. Petaluma Incubator Co., 208 UTD, Indianapolis, Ind.

WANTED—\$200 up to \$15,000 first mortgage loan on realty; liberal interest and commission to lender; edge security. Alex Rogers, 409 Odd Fellow Building, Indianapolis.

THE COMING SHEEP—Big, oily wool-mutton Delaine Merinos; satisfaction assured. H. M. Culbertson, Zanesville, O.

SPORTING GOODS, cards, dice, books, etc.; catalog free. D. O. Smythe Co., Newark, Mo.

MULEFOOT HOGS and seed corn. Dunlap, Williamsport, O.

YOUR NAME and address on 200 stickers about the size of a postage stamp and our illustrated family magazine 3 months—all for 10c. B 7, New Ideas, 233 S. 5th St., Philadelphia, Pa.

HUMANATONE
New patented musical instrument. Wonderful invention; nothing like it; astonishing; marvelous. You can be a real musician and play all the latest popular songs, ragtime, old-time ballads, sacred hymns, dance music, etc.; also fine for piano accompaniment; sure to please. Made entirely of strong metal; will last a lifetime. Thousands sold. Sample by mail 25 CENTS (silver) or 3 for 60 cents. Address S. E. FERRY, Irvington, Ind.

GIVEN
This beautiful cable link neck chain, with fan-shaped pendant, set with sparkling brilliants, together with one of our new cluster rings—a beauty will be given for selling only ten jewelry novelties at 10c each. A. C. BEACH MFG. CO. 128 Second Street NEWPORT, R. I.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION—Can members of federated associations be admitted into local unions of the Farmers Society of Equity, on the terms provided for full members of the Farmers Society of Equity?—Several Inquirers.

ANSWER—No.

Q.—(1) If I understand what a clearing house means, it is a warehouse. If this is correct then I don't think that we can build our clearing house this year. But we expect to market our produce regardless of this, because some of our members still have potatoes to sell. (2) In this vicinity are other farmers' organizations. We want them to market through our clearing house. How will this be brought about?—Joe McConnel, Organizer, Vesper, Wis.

A.—(1) A clearing house does not mean a warehouse, but it is the term applied to the organized forms of the Farmers Society of Equity. So a local clearing house is a place where the members of the community do their business, of selling and buying, or "clear" their business. A county clearing house stands in the same relation to the local clearing houses as the local clearing house does to the members of the community. That is, the county clearing house "clears" the business for the local clearing houses in its district. The purpose of the local clearing house is to bring all of the produce of a community into one unit for marketing. The purpose of a county clearing house is to bring all of the produce of that county down to one unit for marketing. Clearing houses may or may not have warehouses, elevators, etc., to start with. Eventually they will have all the facilities that are necessary for receiving, grading, handling and marketing the produce.

(2) The independent associations should be federated. (Write to this headquarters and make a statement of the names of the associations and their membership if known, and the towns, cities or shipping points where they do business at. Upon receipt of this the national headquarters of the Farmers Society of Equity will submit a plan for federation for the particular case.

Q.—Has a local clearing house the right to buy grain by the car load and deliver to the members what they need, and sell the balance to non-members?—Aaron Boyer, Sec., Shamokin, Pa.

A.—It is not recommended and is not encouraged to do this. However, if the condition was such that the members could not use a full carload of the grain and the advantages of buying a carload were greater than if the purchase would have been made in a lesser quantity, then the local union should permit the balance to be sold to non-members, rather than not be sold at all or perhaps be an inconvenience to hold it.

We are especially requested to report the following for sale:

Several carloads of hay.—E. P. Wisotzkey, sec., Gettysburg, Pa.

100 bushels of Wisconsin No. 8 Yellow Dent Seed Corn, all selected from fields that it is reported yielded a little over 200 bushels to the acre. Germination test 98 per cent. Price \$3.00 per bushel. Webber Bros., Greenwood, Dela.

Q.—In the copy of "Rules Governing Business of Clearing Houses" I notice that the shippers are required to make report to the National Clearing House. Now we have at Portland the Equity Warehouse Company, and it is the only established clearing house in this state, and all business is done through it. It seems to me it would be more convenient for the Equity Warehouse Company to keep in communication with the National Clearing House than for members at large and local clearing houses. Please explain.—P. M. Kirchem, Sec. of Logan L. C. H., Oregon City, Oregon.

A.—Farmers Society of Equity members and federate members in the Northwest, should clear their business as far as practical through the Equity Warehouse Company at Portland, and the society rules does not contain anything to the contrary. It is important however, that when a shipment is made to the Equity Warehouse Company that a copy of the report of shipment be sent to the National Clearing House. Quadruplicate Blanks are furnished for reporting. One is held by the clearing house making the shipment, one is sent to the consignee, one is sent to the National Clearing House and the other one is sent to the county or district clearing house, if one. In this way all interested parties are posted as to the business done and the complete machine of marketing can work in harmony and unity.

Peg Top Pants

Express Prepaid Made to Your Measure \$2.75

Quality, Fit and Workmanship GUARANTEED

Just to prove the wonderful quality, style and value of our tailoring, we make this astounding offer. Pants cut in the latest style. NO EXTRA CHARGE for peg tops no matter how extreme you order them. Sixty-four beautiful samples to choose from—Sent you FREE. Don't miss this bargain opportunity.

Up-to-Date Farming :: Indianapolis

Q.—What have you to say about the "Borah" bill entitled "Agricultural Capital Act"?—Several Inquirers.

A.—The bill says: "To provide for the establishment, operation, management and control of an agricultural capital or central clearing house for the scientific distribution and marketing of agricultural products and for other purposes."

The careful reader of this paper and any person acquainted with the Farmers Society of Equity will exclaim: What a wonderful similarity to the purpose of this society! So our first comment is, that it is a direct and most emphatic endorsement of the object of our society to establish a scientific marketing system with a central clearing house to receive the reports of supply and demand and direct the marketing. If the Borah bill would stop there and if it had a simple and practical plan of organization and operation, if it should ever be organized, we might not criticize it much. But one criticism we would offer, even though the plan was as simple and practical as the F. S. E. plan, is that we do not believe in the government, or any department of the government, operating the farmers' marketing system. American agriculture has suffered much from legislation against the farmers, and the Department of Agriculture has never seemed to understand farmers' needs and interests, but rather it has been conducted more as if it was in the interest of the people who handle farm products and speculate in them. So we say: Save us from Congress and the Department of Agriculture when it comes to the system of marketing the crops, or we may expect to still wear the shackles of the exploiter system.

But the words "and for other purposes" in this bill have a stupendous significance, when the bill is analyzed. Space will not permit a full analysis, but we quote this from things that it is authorized to do: "To own, acquire, construct and operate telephone or telegraph systems, railroads, sidings, tracks, rolling stock, wagon roads, automobiles, aircraft or other means of transportation." It further provides for a board of fifteen directors, each director to receive \$12,000 a year, except the president and secretary, to receive \$15,000 a year. The first directors, according to the bill, are to serve the first five years. The bill also calls for an appropriation by Congress of \$5,000,000 and \$15,000 for each county as it becomes a part of the organization.

But, what's the use? We don't consider that the bill has a ghost of a show to become a law. It may be that it was introduced at this time to divert the attention of farmers from the F. S. E. plan and organization, which is developing rapidly. This theory looks more plausible when it is known that the bill was written at the headquarters of the F. S. E. by a former employe, and who was discharged summarily when his treasonable activities were discovered. We may expect to encounter all kinds of schemers who will try to retard our movement. But the farmer who hopes to ever get out of the wilderness of bad marketing will stick to the Equity plan. We suppose copies of the bill can be obtained from your congressman.

DO YOU WANT AN ORGANIZER?

If you arrange for a meeting to organize a local clearing house, or to federate a present association, and you feel that you should have help at the meeting, correspond with the organizers, named below, who are nearest to you.

- Alabama—C. B. Lozier, Robertsedale.
- Arizona—Charles Knapp, Courtland.
- Arkansas—Walter Terbberville, Point Cedar.
- California—Emil E. Larsen, Camino; Fred P. Wate, Red Bluff.

Your Seed Corn

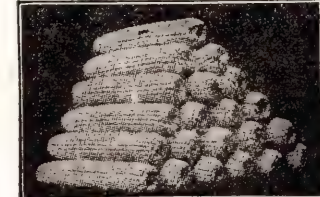

Latest News from Dallas, Texas—"Farmers Interest variety won world's sweepstake prizes for ten best ears and single ear of white corn at International Corn Exposition, 1914."

You can start where corn breeders have brought this corn after eighteen years of systematic breeding. For you to breed up your corn to equal this would require many years of painstaking care and cost more than a thousand dollars to get a bushel. For a nominal price you can buy seed of this corn to plant your crop and you can depend on a big increased yield over any other seed you can plant.

Farmers Interest Corn is the best quality and greatest yielding corn in America. Thousands of customers have enthusiastically testified to this. We print many such letters. Some of the growers live in your county. This corn might be called

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Chicago, 1907.

Twenty Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1908.

THE ALL PREMIUM CORN, because it has almost invariably been awarded the highest prizes wherever exhibited.

The general farmer can not afford to take the time and go to the trouble of breeding corn like our Farmers Interest has been bred. But he can profit by the years of work of the breeder by planting this great variety. This corn was bred like cattle and horse and hog breeders breed the fine stock, that any farmer can get today.

Mr. Corn Grower: The cheapest way and the best way for you to quickly get that improvement in quality and yield of your corn that you are thinking about is to buy Farmers Interest Corn of us this year.

An increase of 10 to 25 bushels per acre in your crop can be depended on if you plant this corn. Send for reports from others who are

Ten Most Perfect Ears. First Prize in Class Open to World. Missouri State Fair, 1911.

doing it right along with Farmers Interest. **REMEMBER, THE EASIEST WAY TO IMPROVE YOUR CROP IS TO LET THE OTHER FELLOW DO THE BREEDING.**

A great many farmers must buy seed corn this year, so why not start at the very tip-top of perfection by getting Farmers Interest seed corn?

No other corn has such a record for premiums won. We show only a few prize-winning lots

Ten Most Perfect Ears. First Prize. Indiana State Fair, 1908.

Most Perfect Bushel. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

of the corn here. No other corn has such a record for drought resistance last year, 1913, and good yields. Every farmer who plants this corn will reap all the benefits of eighteen years of breeding by the most scientific corn breeders in the country.

THE OTHER FELLOW DID THE BREEDING. YOURS TO REAP THE FULL BENEFIT AT SLIGHT COST. Send for price. Reports from growers all over the corn belt and premiums won prove Farmers Interest Corn ahead of all others. Our catalog shows. You should send for it before you lay this paper aside.

In the Center of the Corn Belt **O. K. SEED STORE, Dept. 13, Indianapolis, Ind.**

Read a Few Letters from Farmers

WILL MAKE NO MISTAKE
Ill.—I have been raising the Farmers Interest Corn for a number of years. I have found it to be an enormous yielder and a great drought resister on account of its rooting very deep. Farmers who plant F. I. will make no mistake.—J. N. Bond County, Nov. 26, 1913.

YIELDS ABOUT TWICE AS MUCH
Ohio—Farmers Interest yields about twice as much as other corn does. One-quarter of an acre produced about 25 bushels.—C. W. R. Lawrence County.

100 TO 120 BUSHELS PER ACRE
Ind.—The Farmers Interest Corn is yielding 100 to 120 bushels an acre all over my field. Nothing like it ever seen in all this section before.—L. C. Johnson County.

LIKE ARMS OF GIANTS
Kans.—I visited my brother in Kans. and saw his field of F. I. Corn. I never saw its equal all my way to Kans. and return. The ears look like arms of giants. He wrote me it yielded 114 bushels an acre.—A. M. T., Knox County, Indiana.

DOUBLED THE YIELD
Ark.—I am well pleased with the Farmers Interest Corn. It more than doubled in yielding any other variety I planted. I have come to the conclusion that it is the best all-around corn I ever planted. It stood the drought better than any other kind.—S. J. C., Yell County, Nov. 24, 1913.

Send For FREE CATALOG

We Have Hundreds of Reports from All Over the Corn Belt BEATS ALL

Tenn.—Farmers Interest beats all other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H., Claiborne County.

STAYED GREEN DURING DROUGHT
Ia.—I am unable to tell what the yield of my F. I. Corn was this year, as I "hogged" the corn. However, I think 60 bushels per acre a reasonable estimate, while I estimate for other varieties at 35 bushels and not more than 40 bushels per acre. The ears of the F. I. were larger sized and the stalks were never fired, but stayed green throughout the entire droughty season.—T. A. Mahaska County, Nov. 27, 1913.

EVERYTHING YOU CLAIM FOR IT
Kans.—My experience with the Farmers Interest Corn leads me to say that it is everything you claim for it. Will produce with any variety of corn grown in Kans.—W. M. T., Franklin Co., Dec. 1, 1913.

Woman's Work and Welfare

Helpful Hints for Homefolks

Fireside Social Chats

By Aunt Sophia and Others

IF THERE is a kitchen crime, it is waste, the destruction of valuable food for no purpose.

It is an unquestioned fact that there is serious waste of valuable food due to so many housewives who do not properly appreciate the value and possibilities in many articles which they let go to waste, or feed to fowls or pigs. I have known some housekeepers to throw good suet into the waste, or, in one case I recall, used it for soap making! Suet has the same food value as lard, and what queen of a kitchen could be caught using lard for soap grease! If properly tried out, suet is a very satisfactory substitute for lard for frying purposes.

In England, Germany, and other European countries, suet is valued highly, carefully rendered and saved, and used interchangeably with lard. Knowing how to render it properly will help the housewife to appreciate its good qualities. Here is a good way: Cut into small pieces, put them in a sauce pan and cover with cold water. Do not put a lid or cover on the pan. Leave it uncovered to allow the steam to carry off any disagreeable flavor. When the water has nearly all steamed away, set the pan on the back of the stove, and let the fat "try out" slowly. When it has ceased bubbling, allow the scraps to settle to the bottom, strain through a cloth, and set away to cool.

A splendid way to use suet is to mix it with lard as follows:

Take two parts of suet and one of leaf lard, finely ground, and mix together. Render this with whole milk in the proportion of one-half pint milk to two pounds of the mixed suet and lard. (Render means to melt down or to clarify by melting.) The suet and lard mixture may be finely divided by passing it through a meat grinder, and may then be heated in a double boiler, when the fat will be quickly released from the tissues, and when allowed to cool will form a cake on the surface of the liquid which may be easily removed.

This fat has a good odor, color and texture, and is softer than the suet alone. It is useful for frying and the shortening of foods with high flavors and may be used with fair results in shortening such things as baking powder biscuits. It is useful for cooking vegetables either alone or with the addition of a little butter.

Now, what do you think of this: A great architect in the employ of the agricultural department of the United States government says the housewife of a hundred years ago, with her log cabin kitchen and fire-place cooking, was better provided for than the average farmer's wife of today, relatively speaking. That is, with what a farmer and his wife had, or could have had to do with in those days, the wife had as good an equipment as the husband, if not better. Today, the husband has much the best of it, and the kitchen is far behind the standard of the barn and the machinery shed. In many cases, I think this is only too true.

This government architect says a number of quite sensible things about the farm home, which he declares to be the most important building on the farm. Here are a few of his statements worth thinking about:

"The mental and physical fitness of the farmer and his family are vitally affected by the home that shelters them. Their health, comfort and happiness are dependent upon its construction and equipment, and health, comfort and happiness are as essential to efficient service as improved tools and out-buildings.

"If intelligently planned home, with the help of vines, shrubs and trees can be made the prettiest spot in the landscape, and yet be inexpensive.

"Pleasant, cheerful, comfortable farm homes tend to hold the family together, while the cheerless, unlovable, insanitary houses drive boys and girls to the cities.

"Economy in labor and conservation of the woman's strength are two important factors to be considered in the construction and arrangement of a home and its equipment."

All these ideas are correct and valuable, and no doubt the Department will be sending out bulletins full of helpful hints and suggestions for making labor less and life's burdens lighter for us.

A LADY FROM MISSOURI

Dear Aunt Sophia and Home Folks:

Today, I am "just visitin'," so please give me a comfortable chair, for I am quite "hefty" and a rocking chair is such a comfort.

Winter is nearly over and now is the time to can the left over kraut, pickles, pumpkins, squashes and sweet potatoes. We have plenty of empty cans on hand now, and spare time, and it's nice to have these things ready for quick meals when the rush of spring work leaves us very little extra time.

I never work evenings, as I think I do quite enough through the day, so evenings I spend reading aloud to my husband and son. This winter I have read all of Harold Bell Wright's books and some of Cooper's, besides our papers and magazines. I can read for hours without getting tired. My son is fourteen years old, and if I find anything in books or papers I do not think just the thing for him to hear, I omit that part. Some day he may read them himself, but his character will then have been formed and no harm will result.

We have had snow on the ground several weeks and the birds were getting hungry, so my boy fixed a large box, scattered wheat on top and every day red birds, blue jays, robins and snow birds come and eat.

I just finished making me five sleeved aprons. It seems to me, sleeved aprons and low heeled shoes are a necessity for kitchen work. What do the rest of you think about this?

I am also making me some rag rugs. I cut the rags one-half inch wide, sew hit and miss and crochet them, plain stitch. I make them one yard wide by two long. Some of the rest of you please tell us about rug making.

I raise the Single Comb Rhode Island Red chickens. They lay good all winter, so that settles the pocket-book question in our family. I have my own pocket-book. Don't you think our paper, Up-To-Date, is just fine? My husband says it is doing more for the farmer than any paper published. Now, I must go. Come and see me, everybody. Good-bye.—Mrs. Erminie Alphonso, Union, Mo.

A LETTER OF THANKS

Dear Friends of Up-To-Date Farming: I want to thank every one who has answered my letter asking for a remedy for indigestion. I have received many helpful letters, so many it is impossible for me to answer all of them.

Best wishes to Up-To-Date Farming and all its many readers.—Mrs. C. H. Barthold, Krum, Texas.

When you get them, if for any reason they are not satisfactory after you have tested them 30 days or before the 30 days are up, you can return them at our expense. You are not obliged to keep them. We leave everything to you.

Description of Rocker

This rocker is made of selected hardwood, is screw fastened in the most approved manner, which any furniture man will tell you is the most satisfactory way of putting a chair of this kind together. Back is artistically shaped, has seven turned spindles joining the top and bottom panel. Front and back posts also are turned. Arms are shaped, strongly fastened to back and seat. The finish of this rocker is equal to that of a chair selling for \$5.00 to \$10.00. It is finished in the very best American Quartered Oak and the polish is superb. You would pay as much or more at a furniture store as our price of \$5.00 for a rocker as good as this one, and you would get no products with it. It is 38 inches high, 24 inches wide and 16 inches from the floor.

Better Than Expected
The rocker is much nicer than I expected. My neighbors say the chair alone would cost me \$5 at stores. The products also are very good indeed.
Mrs. E. J. Bailey,
Alton, Ill.

A CALICO TEA

This little deviation from the formal afternoon "teas" that are at present so popular will appeal to the farmers' wives as an oasis in the desert of formality.

Invitations were sent written on brown paper, that ran as follows:

On Valentine's Day at the old M. E. You are invited to come to a "Calico Tea;"

Beginning promptly at half past three, A bounteous spread will meet your gaze

That will bring to mind your grand-mother's days.

In a calico gown come prepared to dine Or be prepared to pay a fine. Bring print for an apron small or great, And 15c will secure your plate.

The tables were spread with red table cloths, old-fashioned castors, wood handled knives and forks, with the plates turned over, brown sugar in sugar bowls, tin spoons in spoon holders. We served potatoes boiled in the jackets, fried salt pork, turnips, squash, baked beans, brown bread, butter, twisted fried cakes, scalloped cookies and prune sauce, with tea. The ladies all came dressed in calico. We received goods enough when made for an "apron bazaar," and what a good old-fashioned time. This can be modified and used as an "at home" function, or for financial purposes.—Mrs. F. Swancutt, Riceville, Iowa.

CLOTHESLINE BOX

Almost every housekeeper knows how annoying it is to find the clothesline full of knots and kinks, or, perhaps, so soiled on wash-day that she must wash it before stretching for the waiting clothes. With a clothesline box, such as here described and illustrated, the line will not only be found clean and ready for instant use, but serve its purpose much longer. The box is made as follows:

First obtain or make a box having an inside measurement of about 6 by 4 inches, and about 9 or 10 inches deep. Within this, midway between top and bottom, as shown in sketch, fit a spool or reel to wind the line upon, and to turn by means of a small iron crank from the outside. Around and just within the circle of the crank's travel bore about six small gimlet holes in which to insert a wooden peg or pin for the purpose of locking the reel when line is stretched. That the pin may always be at hand fasten it to the box as shown with a bit of twine. Next fit the top of the box with a hinged lid, making it overlap a little to shed the rain. When finished fasten the box at a convenient height from the ground to the post or building from which you start the line.

On wash-day you have only to raise the lid, hooking it back if necessary, and pull the line from the reel, pass it over a hook or through a pulley directly above the box, thence to the various other points in the yard, fastening it securely to the last hook or pulley. The

Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

line may now be stretched as tight as desired by turning the crank, and held so by inserting the pin behind it. To take the line down you simply release it from the last hook or pulley and turn the crank. If desired the box may be made a trifle longer and a door fitted in the lower part to provide space for clothes-pins.

EARNING INDEPENDENCE AND MONEY

Dear Sisters: I've been a subscriber to this paper for many years, and I enjoy it exceedingly. Our kindly editress has asked for experiences in the man-and-woman-and-money problem. I will give a little of mine.

My father died when I was very young, and I had to fight life's battle alone. I made my own way in the world, an independent, yet dependent woman, earning the money and spending it. When I was married, my situation changed, and I found my husband's idea was that a wife had no need, therefore no reasonable desire to have money, so long as the husband provided for all her needs. If she wanted money for any purpose, she should ask for it. You know how pleasant that would be to some of us! The independent spirit refused to die, or rest, and I answered scores of advertisements, searching for a scheme for money-making I could employ, but all were failures. At last, I turned to poultry. Four years ago I bought six pure-bred hens and a cockerel. I have a nice flock now of fifty pure-breeds that any woman might well be proud of, and they bring me in about \$50 a year in money.

Perhaps, after all, a closed pocket-book may be a blessing in disguise to many, as it was to me. I can make a living now from my poultry, if I were thrown on my own resources. Every farm woman should be able to manage for herself, and poultry offers the opportunity, for a woman with a flock of high class fowls can be independent. —Mrs. E. J. J., Oklahoma.

A LOCAL CLEARING HOUSE WANTED

in every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 16. Fill it out and send today.

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but \$1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. Or send \$1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

EARN WATCH, RING AND CHAIN Our fully guaranteed watch is highly engraved, stem-wind, stem-set, simulated gold finished, desirable size, late this model. Given free to anyone for selling 20 jewelry articles at 10c ea. Order jewelry now; when sold send \$2 and we'll send you watch, exquisite three-piece RING and fine Ladies' or Gent's Chain FREE. DALE WATCH CO., DEPT. 53 CHICAGO

919 New Styles Gold Bevel Edge Hidden Name, Silk Fringe Envelope and Post Cards; 100 Rich and Easy Jokes; 1 Trick Fun, 1 Escort and Love Cards; Star Beau-Catcher; Big Sample Book. Cards, etc., all Two cents. UNION CARD CO., 838 Columbus, Ohio.

32 NICE POST CARDS different sorts, and a Good Magazine for one year. The WHOLE THING for only ten cents. ROBERTS & CO., 3247 WOOD ST., CHICAGO, ILL.

We were surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent of the farms in the country.

Grape vines are inexpensive to start with. They are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and they practically last always. In addition to all of these things, grapes bear fruit every year and the fruit is healthful, valuable and desirable almost second to none that grows.

Considering the sum of these advantages, how can any householder justify himself in putting off planting some grape vines any longer? Only one in seven farms has a grape vine. There are also hundreds of thousands of town and city homes that have neglected to provide this handsome vine and universally prized fruit. Grape vines such as ours would cost 50 CENTS EACH or more from nursery salesmen.

The varieties are Niagara, Moore's Early, Concord, Diamond, Worden and Catawba. This collection comprises extra early, medium and late varieties, and the three colors, black, red and white. Full directions will be sent with each collection.

Our Offer Send 75 cents and get this collection of six grape vines and UP-TO-DATE FARMING one year, or send a club of five at 50 cents—\$2.50—and we will send you thirty vines and the paper one year to each subscriber. Send the coupon.

THIS IS THE COUPON PUBLISHERS UP-TO-DATE FARMING Indianapolis, Ind.

Enclosed is \$..... for which send Up-to-Date Farming one year and grape vines, all charges paid, as per your offer.

House Dress Pattern GIVEN

This pretty, new, one-piece house dress is the most practical and attractive house dress that can be worn this season. The blouse closes at left side and has new Mandarin arm hole, with sleeves inset. Round neck, trimmed with handsome collar; removable chemise. A four gore skirt is attached to the blouse. Closes at side of front and has reversed box plait in back. Empire or regulation waist line can be used. Very easily made—use cheviot, wool crepe, crepe, charmeuse or any suitable material. Pattern No. 5844 is cut in sizes 32 to 40 inches bust measure. Requires about 4 yards of 50-inch material and 2 yards insertion. To quickly introduce our big home and farm magazine we make this liberal offer good only 20 days: Send 10c. for trial 3-months' subscription and enclose names of 5 housekeepers and we will send you this popular dress pattern free. Be sure to give size, also say you want dress pattern No. 5844. VALLEY FARMER, Pattern Dept. 202 Topeka, Kansas

Crooked Spines Made Straight

You need not venture the loss of a penny. No matter how serious your case, no matter what else you have tried, the Sheldon Method will help you and probably wholly overcome your affliction. We are so sure of this that we will make a Sheldon Appliance to suit your special condition and let you decide, after 30 days, whether you are satisfied. We make this unusual offer simply because the 18,000 cases treated absolutely prove the wonderful benefit the Sheldon Method brings spinal sufferers, young and old.

Use the Sheldon Method 30 Days at Our Risk

There is no need to suffer longer or bear the torture of old-fashioned plaster, leather or steel jackets. The Sheldon Appliance gives an even, perfect and adjustable support to the weakened or deformed spine and brings almost immediate relief even in the most serious cases. It is as easy to put on or take off as a coat, does not chafe or irritate, is light and cool.

The price is within reach of all who suffer. Send for our free book today and describe your case as fully as possible so we can advise you intelligently.

PHILO BURT MFG. CO. 315 Fourteenth St. Jamestown, N. Y.

This 3 1/2 Foot Telescope Nearly Given Away

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for \$5 to \$8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 3 1/2 feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

FINEST THING I EVER HAD

I received the telescope and will say it is the finest thing I ever had. I would not take \$5 for it. I think every boy and man on a farm needs one of these telescopes.—Chester Housen, Minden, Ga., R. 3.

BEST FOR THE MONEY I EVER SAW

I have a word to say in regard to the "Wonder" telescope which I received some time ago. It is the best for the money I ever saw. Would like to know if the price is still good, as my neighbors are worrying me to death about it. I want to order more.—James W. Raines, Sedalia, O.

A SOURCE OF NEVER-ENDING INTEREST

I have great pleasure in informing you that I have received the "Wonder" telescope. The children, who are forever asking to be allowed to see through it, seem to find it a source of never-ending interest. Please accept my thanks.—Classton C. Swift, New York City.

COUNT WINDOWS IN HOUSE SEVENTEEN MILES AWAY

I wish all to know how satisfactory the "Wonder" telescope is. Our farm is on the highest point in the surrounding country. From our place we can see with the aid of the telescope over into the Kansas Indian reservation, nearly twenty miles, count the cattle and tell a horse from a cow; can see a large ranch seventeen miles east that can not be seen with the naked eye; can see the color and count the windows with the telescope.—F. G. Patton, Arkansas City, Kas.

CAN SEE 10 MILES WITH IT

Received telescope last Friday. It is a dandy. Am well pleased with it. I can see ten miles away.—W. E. Dickerman, Jr., Chatham, Mass.

BETTER THAN A \$5 ONE

I received my telescope in good condition. I think it is better than a \$5 one. I am sending for another one for one of my friends and I know of more that want them.—Thomas Mosman, Haffard, Ia., R. 4.

WOULD NOT TAKE \$10 FOR IT

I received the "Wonder" telescope and it is just dandy. I wouldn't take \$10 for it if I couldn't get another one like it. I can see ten miles with it and can read 2 1/2-inch printing easily a mile away. I can count cattle at five miles.

No farmer should be without one. It would save him many a long walk to see about his stock.—W. A. Eekridge, Ammond, Ky.

CAN SEE 13 MILES ACROSS LAKE WINNEBAGO

We received the telescope in fine shape. It certainly is a wonder. We live on the north shore of Lake Winnebago, and can see across the lake on the other shore, which is thirteen miles. We can see cows grazing real plain. Also all the churches and houses. I don't know of anything we have ever had that we enjoyed as much as we do the telescope.—Charles Hinterthner, Neenah, Wis.

Our Offer To advertise the "Wonder" telescope we will send one for only \$1. Send 10 cents extra for ordinary postage, or 20 cents for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. All we ask is that you show it to your friends. Full instructions free with each telescope.

What is Now the Fashion

6608. LADY'S WAIST.—This model is one of the best liked. It is entirely plain, with drop shoulder, center front closing, and a handsome collar at the neck. The sleeve may be made short if desired, but a full length model, in the new bishop shape, is provided with the pattern. These waists are extremely popular in voile, cotton crepe, chiffon, wash silk and other soft materials and can be worn over a camisole or corset cover of tender color if desired. Sizes 34 to 44 inches bust measure. Medium size requires 2 yards of 40-inch material.

6602. LADY'S SKIRT.—To wear with such a waist as 6608 no better skirt design could be found. This is suitable for any of the new fabrics and will look just as well in a heavy gingham as in linen, cheviot or chiffon taffetas, all of which are used for the purpose. The skirt has four gores, with a flat panel in back and front, the latter curved out at the top and having a pocket inserted. Sizes 22 to 32 inches waist measure. Medium size requires 2 1/4 yards of 44-inch material.

6625. ONE-PIECE SUIT.—An excellent design for a one-piece dress. The plain blouse has an ornamental line at the front closing and is open at the neck, which is trimmed with a small turnover collar. The sleeves are of regulation shape, set in with the usual armhole. The skirt has four gores and closes in front. It may have either the raised or normal waistline. These dresses are very smart when fashioned on plaid or striped materials, of which we have large numbers this spring. Wash goods, as well as woolsens, are used and often a sash of Roman ribbon will do much to brighten a quiet color. Sizes 34 to 44 inches bust measure. Medium size requires 4 yards of 44-inch material, with three-fourths yard of 27-inch contrasting goods to trim.

6575. ONE-PIECE DRESS.—Another one-piece dress is shown, with the drop shoulder and a wide collar and a three-gore skirt, which opens in front. This is also suitable for either woolen goods or wash materials. Sizes 34 to 44 inches bust measure. Medium size requires 6 yards of 36-inch material.

6564. NURSE'S DRESS.—This may be worn by a nurse or by other women and is plain and easy in fit. There is an extra wide armhole and a round neck finish and the skirt, which is a four-gore model, may have either habit back or reversed box pleat. Sizes 34 to 44 inches bust measure. Medium size requires 5 1/2 yards of 36-inch material.

6616. GIRL'S FROCK.—This has a plain blouse, closed in front, and with a removable shield at the neck. The straight skirt

is pleated all around and closes at the side of the front. Contrasting material trims the collar, cuffs and belt. Sizes, 6, 8, 10, 12 and 14 years. Eight-year size requires 3 yards of 36-inch material, with one-half yard of 30-inch contrasting goods.

6607. BOY'S RUSSIAN BLOUSE.—This has a very deep yoke in front and a single wide box pleat, while the back is plain. There is a wide collar and little bishop sleeves. Bloomers are provided with the suit. Sizes 2 and 4 years. Four-year size requires 2 yards of 44-inch material.

6589. LADY'S NEGLIGEE SACQUE.—This delightful garment may be worn in bed, or for breakfast or in the morning hours when no one is around. It can be made of lawn, challie, cassimere, wash silk and other materials and is cut in one piece. The openings under the arms are tied together with ribbons. The neck may be trimmed with a wide collar or finished more plainly as desired. Sizes 34, 38 and 42 inches bust measure. Medium size requires 1 1/2 yards of 45-inch material, if cut crosswise of the goods, without seam at back, or 2 1/4 yards of 36-inch material with a seam in the back.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

I AM GLAD to prepare the usual number of excellent letters from the young people—letters that show UP-TO-DATE Farming is read everywhere—but in advance of the "make up" I cannot tell whether they can get in the paper or not:

DEAR CADETS—I have been a reader of UP-TO-DATE for a long time and I like it very much. I have lived in the country ten years and I like it better than the city. I am attending high school and hope to finish this year. I would like to hear from all the Cadets and will answer all I hear from.—Lillian Meyer, Hancock, N. Y.

DEAR CADETS: Here comes a farmer girl from Indiana, the home of UP-TO-DATE. For many months I have been greatly interested in the paper and the doings of the Cadets, and now I am sending my letter. I hope to learn more and more from your good paper, and am ready to exchange thoughts with you all. My age is 19, and I am both active and industrious.—Jessie Ramsey, Hillsboro, Ind.

DEAR CADETS: I am a farmer boy who wishes to join the Cadets. I live on a small truck farm 10 miles from Cincinnati. We take UP-TO-DATE FARMING and like it very much. I think every farmer ought to read it. I am 16 years old and have lived in the country all my life. I would like to correspond with the Cadet boys and girls; will try to answer all I receive.—Verne E. Stevens, Madisonville, Ohio.

DEAR CADETS: I have been a reader of UP-TO-DATE for about two years, and I enjoy reading the Cadet letters, so I would like to be a Cadet. I live with my parents on a farm of 115 acres, and will be 18 Aug. 19. I attend a country school, and will finish the 8th grade this winter. I would like to exchange cards and letters with the Cadet girls and boys, and will answer all I receive.—Clarence Oden, Middletown, Mo.

DEAR CADETS: I would like to join the Cadets of Equity, though I am not a farm girl. My people take UP-TO-DATE FARMING, but as I am away from home now I rarely see the paper. I am a music teacher in a small town not far from my home town. This town is shut in by hills on almost every side. I haven't been here long enough to be well acquainted, and would like to correspond with some of the Cadets.—Mildred DeCann, Honor, Mich.

DEAR CADETS—I live on a farm of 240 acres, one and a half miles from town. I am 14 years old and go to school. I have passed the township examination. Our principal crops are corn, wheat, oats and clover, with a little alfalfa. I like the Cadet letters. We have a local clearing house in Galesburg and it has been a great help to the farmers who have had to buy feed. I will be glad to hear from the Cadets.—Joseph C. Robinson, Galesburg, Kas.

DEAR CADETS: Though I do not live on a farm, I am a faithful reader of UP-TO-DATE FARMING. I live in a small village in western Louisiana. I am a lover of music, and can play a few tunes on the organ. I live near a church, where we have preaching twice a month. We also have a fine school which I attend every day. We have a basket ball team. I am 15 years old, and would like very much to hear from the Cadet boys and girls; will try to answer all a receive.—Ola Mae Williams, Walker, La.

DEAR CADETS: It has now been three years since I began reading UP-TO-DATE FARMING, and I have enjoyed it very much, especially the Cadet department. I am a young farmer, living on a 70-acre farm in Genesee county, New York, in the world's famous apple district. Among the principal crops are corn, potatoes, beans and wheat. I would like to hear from all the girls and boys, especially those in the South and West. Will exchange letters and photos.—Arthur E. Eldred, Batavia, N. Y., Rt. 4.

DEAR CADETS: I am a girl 16 years of age, and my father has been taking UP-TO-DATE for 14 years, and thinks it is a fine paper. I have lived in Louisiana for 10 years, but I like the North better. We have 9 head of cattle, 55 hogs and about 60 hens. I visit sometimes in the city, but I like the country better than the city. I have one sister and two brothers, and we live at home with our parents. I would like to hear from all the Cadet boys and girls, and also to exchange photos. I will answer all.—Myrtle Forney, Charenton, La.

DEAR CADETS: I am 17 years old, but I am an "old" engineer. I have run a Hart-Parr oil traction since I was 9 years old. It is a 20-horse power engine, and I pull six furrows with it in these hills; so I have to keep my wits together to handle it all alone. I live with my parents and 4 brothers and 3 sisters on a farm of 519 acres in rocky North Dakota, and we raise wheat, oats and barley. I would like to correspond with the Cadet boys and girls, and will try to answer all that write to me.—Ernest T. Matthiesen, Judson, N. Dak.

DEAR CADETS: I live on a 137-acre farm on the Little Tennessee river, and have lived on the farm all my life. I go to Sunday school at Axley Chapel every Sunday, and we have the banner Sunday school of London county. I will be 16 April 7, and have three sisters and two brothers. My brother has been taking UP-TO-DATE FARMING for three years, and I sure think it is a fine paper. I will be glad to hear from any of the Cadets, boys or girls, and will try to answer all I receive.—Axie McKelvey, Greenback, Tenn.

DEAR CADETS: I am 18 years old, and live with my father and mother in the state of New Jersey. We have been taking UP-TO-DATE for the past year, and find it to be both interesting and helpful. We are about a mile from the city, and have a small piece of ground, which, by the help of UP-TO-DATE FARMING, my father makes profitable. I always like to read the Cadet letters, and will be pleased to hear from all the boys and girls; will gladly answer all letters and cards I receive.—John L. O'Dea, 57th St. and Paul's Ave., Jersey City Heights, N. J.

DEAR CADETS: I do not take your paper, but I am a faithful reader of it, as my sister has been a subscriber for some time. I, too, find UP-TO-DATE FARMING of great value, for I am a school teacher, and many useful hints in agriculture are given in it. As I am away from home I would be pleased to hear from any of the Cadet boys and girls, and I promise to do my best toward answering them. I have been teaching for nearly four years, and have always been fortunate in having UP-TO-DATE FARMING to read.—Amanda Pettelkow, Oakwood, Wisc.

DEAR CADETS: I am a fruit grower and florist, and reside in the suburbs of Dallas, Oregon. I am a subscriber for UP-TO-DATE FARMING, and know it to be the very best farm paper in the United States. Dallas is in the western part of the great Willamette Valley, and is 40 miles east from the Pacific ocean, and 75 miles south of the Columbia river. Our principal crops are hops, wheat, oats, and all varieties of fruits except tropical. Italian prunes are grown in large quantities near Dallas. I will exchange letters and cards with all who write.—John B. Embree, Dallas, Oregon.

DEAR CADETS: I have just been reading your letters in UP-TO-DATE, and I sure did enjoy them. I am 18 years old, and attend the Hoboken high school. We have a literary society, and have a debate every alternate Friday afternoon. We have a nice library, and I am librarian. I attended the state fair at Montgomery last fall, and it sure was fine. Mother has been taking UP-TO-DATE for several years, and we all like it fine. Papa was in the wholesale and retail horse and mule business, but he is book-keeper for a sawmill now. I check lumber and scale logs some of the time during vacation. I would like to exchange post cards with the Cadets.—Eric C. Smith, Nicholasville, Ala.

What do you think of flowers in winter in our farthest northeastern state?

DEAR CADETS: I have taken UP-TO-DATE for several years, and I enjoy the Cadet letters. I am writing hoping to become a Cadet myself. I lived on a farm until about two years ago, when I began working in a greenhouse. It is very pleasant working among the flowers when everything outside (Jan. 26) is covered with snow. We raise mostly pinks and sweet peas, but we have some ferns and calla lilies, also a few Easter lilies and tulips. I will be pleased to receive cards or letters from any of the Cadets, and will answer all I receive.—Roy L. Libby, Cumberland Ctr., Maine.

DEAR CADETS: I'm a 16-year-old Kansas boy, and a little time I will employ To write you Cadets a little verse; It may be bad, or even worse. My letter may be a little late In reaching good old UP-TO-DATE; For it will take me quite a while To write this up in tip-top style. But I will try my very best, And let the editor do the rest. I live on a farm of Kansas ground, Where corn and wheat and oats abound; But crops were a failure here last season, I guess dry weather was the reason. And now I want Cadets to write, And I will try with all my might To answer each and every one—I'll guarantee we'll have some fun. But I must close this little rhyme, And write again some other time. —Ted Johnson, Crisfield, Kans.

Once more we have reached a point where we must say good-by. That's the way it is in life. Events are constantly transpiring, and we must often say good-by when we would much rather not do it, for we meet occasions that we would rather had "passed by on the other side." Faith and philosophy help us to make the best even of painful incidents.

Only one name from each family accepted. Write me today. **A. M. PIPER, 965 Popular Bldg., Des Moines, Ia**

Free Duty

You Now Save \$15²⁵

The wonderful French-Belgian Melotte now comes in free of all duty. The tariff is off. The world's greatest cream separator—the superb, grand, prize-winning Melotte—can now be secured by American farmers without paying the high duty—at a price \$15.25 lower than ever before outside Europe.

You win! Yes, you get the benefit of this new free tariff. You save the high duty. This wonderful imported cream separator—the most efficient and scientific the world has ever seen—the incomparable Melotte—is now ready for you. Introduced a year ago, it swept the country even with the duty on. Those who knew cream separator values were glad to pay it. But now the tariff is off—you save all—the Chicago price is the same price as you would pay in Belgium—plus only \$1.75 for water freight.

And it is now being offered on the most sweeping and sensational introductory offer—positively the first bona fide, no-money-down offer ever made on any cream separator—American or foreign. An amazing make-good or send it back offer.

Greatest Cream Separator Offer

No manufacturer of any cream separator—foreign or American—ever dared to make such a startling offer before. All others who have pretended to offer you a free trial have taken care to get something out of you first. But we don't want anything. A simple request brings the great Melotte—direct from Chicago to any responsible farmer—so it can positively prove its absolute superiority.

Read every word of this great offer. It proves our absolute faith in the great Melotte Cream Separator. You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we

ask you to send us one cent. You never saw another manufacturer who was so open-handed in his offer. The reason is that no other manufacturer ever wanted you to know all about his machine before paying him anything. We do.

The Melotte bowl hangs down from a single perfect bearing and spins like a top. It will continue spinning for half an hour after you stop turning crank unless you apply brake. Patented self-balancing bowl is entirely automatic. You can't get it out of balance and so perfect is the balance that it is impossible for it to vibrate and affect the skimming efficiency like other separators. The bowl chamber is made of special cast iron, porcelain lined with white bath tub enamel. The Melotte is easiest to clean, perfectly sanitary and will last a lifetime.

Absolutely guaranteed for 15 years.

Sent Without a Penny Down —30 Days Free Trial

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. We don't want a cent of your money. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that is a free trial in every sense of the word. It is a free trial because we don't ask you to pay us any money down—there is no C. O. D.—no lease nor mortgage. You keep your money right in your own pocket.

Some people PRETEND to give you a free trial, but they ask you to give them your money first. We are not afraid to let our separator speak for itself. Test the Melotte Cream Separator in every way, watch your profits go up, watch the increase of the amount of cream, then, if you do not believe that you ought to have a cream separator, just send it back at our expense. If, however, you decide to keep the genuine Melotte, we will allow you to keep it on extremely easy

Monthly Payments

need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality do not pay for it at all. It pays for itself. That is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is absolutely correct. A few months and the separator has paid for itself. It does not cost you a penny because the increased amount of cream has paid for the machine. We don't want to tire you here with a long discussion of how our cream separator is made. You can best understand this if you will let us send you our free catalog.

These monthly payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't

out of your increased profits. You don't out of your increased profits. You don't out of your increased profits. You don't

Find out about these terms anyway, even if you don't expect to buy a cream separator just now. Remember—no money down, free trial and easy payments on the greatest European separator—and we let the separator tell its own story. You see with your own eyes why we can afford to guarantee this separator for 15 years. The most sensational offer ever made in connection with a cream separator. Our catalogue tells all about it. Don't delay. Sign the coupon right now!

The Melotte Separator
19th Street and California Avenue
Dept. 4053 CHICAGO, ILL.

Imported
direct from
Belgium

Wonderful Record of The French-Belgian Melotte

Half a million Melottes are in daily use all over the world. Recognized as the world's best separator. The Melotte has won over 180 International prizes. One Melotte has been running at Remincourt, Belgium, the equivalent of 54 years' of actual work without appreciable wear. Think of it! Every part is made at the factory at Remincourt, Belgium, by French and Belgian mechanics, and comes just as it is packed in foreign factory.

The reasons for its superiority are plain. The bowl hangs down and spins as though running in oil. It can't get out of balance. There is nothing to get out of alignment and wear out bearings. The bowl-chamber is lined with special indestructible white enamel. The Melotte runs like new after ten years' use.

For 25 Years World's Grand Prize Winner

Here are a very few of the hundreds of grand world's prizes the Melotte has won. Entire list would cover this page.
1888—Brussels—International Exhibition—Progressive Prize.
1894—Medal of Higher Merit.
1896—Vienna—First Prize.
1897—Brussels—World's Exhibition, First Prize.
1898—London—First Prize.
1900—Paris—Gold Medal and First Prize.
1903—London—Gold Medal and First Prize.
1904—St. Louis—Gold Award.
1906—Milan—First Grand Prize.
1907—Amsterdam—First Prize.
1911—Brussels—Grand Prize and First Gold Medal.

Test With Other Machines

Before you decide to buy any Cream Separator arrange to test a MELOTTE along side of the machine you now think is the best separator in America. We want you to do this. Then there can be no doubt in your mind as to whether you are really getting the best machine. This is the only way to buy a cream separator. Then it will not be necessary to take anybody's word.

You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money.

Write to us about the MELOTTE and the MELOTTE FREE TEST today. We are the sole factory representatives in America.

The Melotte Separator
Kindly fill in this coupon and we will send you free and prepaid our book "Profitable Dairying" by Prof. B. H. Benkendorf and Prof. K. L. Hatch, the Wisconsin Dairy Experts. We will also send you our free Melotte Self-Balancing Bowl Cream Separator Catalog, explaining our no-money-down and easy monthly payment offer on Melotte Cream Separators.

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

Two Big Conferences on Marketing Farm Crops

One year ago the first national conference on markets and farm credits was held in Chicago. The agricultural notables were all there. It required a book of about 200 pages to record all the speeches made at that conference. Three one-syllable words will record all the work that has been done since because of it. They are "NOT ONE THING." (We do not underestimate the value of the conference, educationally, but we believe in applied education. When we learn what is needed, then let us supply it.) The whole conference agreed that organization was the plan to improve markets and credits. But so far as we are able to discover not one speaker, nor one publication taking part in the conference, has organized a single community of farmers since the conference, twelve months ago, with the single exception of UP-TO-DATE FARMING. And now two conferences are to be held—one in Chicago and the other at Louisville, Ky. What will be the outcome?

Farm Women to Have an Exposition Building

Possibly not all of our women readers know that there is an "International Congress of Farm Women," an organization of, by and for the farm women of the world, to do whatever organized, intelligent co-operative effort can do to advance the interests of woman's life in the country. This organization occupies a similar position regarding the welfare of farm women that the Farmers Congress occupies in relation to the farmer and his work. Its chief function is education along lines of particular importance in the making of homes and rearing families.

The executive board of this organization has launched a movement for a Farm Woman's Building, to be erected at San Francisco for the Panama Exposition, for the purpose of having a headquarters where the farmers' wives who visit the exposition can congregate to see what is being done by this organization and to participate in the world-wide movement for the uplift of the farm home. The building is to be erected by means of donations, and the executive board has sent out an appeal to the farm women of the country to have a part in it by donating to the funds, even if only in very small amounts. Donations should be made to Mrs. Belle V. Harbert, president, 340 Century Building, Denver, Colo. The building will doubtless be a great credit to the farm women of America, a fitting monument to their industry, thrift and progressive spirit.

"Scarcity" of Eggs

During all the past winter the daily press and the city people have been full of complaints of the lack of eggs. The price of eggs became extravagant in the cities and the dealers said it was because eggs were so scarce. The hens had quit laying, they said. So general was this story on the markets that the Department of Agriculture proposed to inaugurate (perhaps did) an "expert" investigation to learn why the hens had ceased to lay! Did any one imagine it was those who control the markets that made eggs so scarce and high? If those who get possession of the eggs refuse to sell them in this country so that what they do sell they can get enormous prices for, it matters little as to results whether the hens lay many eggs or few. The fact is, at the very times when eggs were said to be so scarce in American cities eggs were being shipped to other countries in almost uncountable quantities, not because the shippers could get more for them abroad, but because they could get so much more for those that remained. We ask attention to the following quotation from Bradstreet's, a universally accepted authority in all business matters:

American eggs go to all parts of the world, but the bulk of them find their way to Canada, Cuba, Mexico and Central America. Of the 20,500,000 dozen eggs exported in 1913, 12,750,000 dozen, or considerably over one-half of the total, went to Canada; nearly 6,000,000 dozen to Cuba; 750,000 dozen to Panama, and about an equal number to Mexico. Considerable numbers, however, go to England and Scotland. The average price at which eggs were exported during the fiscal year 1913 was 21½ cents per dozen, and the average price at which 1,250,000 dozen eggs were imported was 15 cents per dozen. The total value of all eggs exported in the fiscal year 1913 was \$4,391,653.

High Cost of Governing

People have talked about the high cost of living until they have almost become hoarse, and the papers have been full of it for more than a year. It might be well to change the subject a little and have a thought and a word about the high cost of governing. City, state and national governments seem absolutely reckless of expenditure. The people of Illinois this spring are paying a heavier state tax than they have paid for years, and the same is true of many other states. As we have said, there seems to be an absolute recklessness of public expenditure. New officers, new commissions, all at high salaries but of doubtful benefit, are being created, and expenditures are constantly piling up.

For some years it has been the boast that the United States was able to meet the requirements of a billion-dollar Congress—that is, that each Congress spent a billion dollars and the people paid it without much of a murmur. But at present things indicate that we shall go beyond the billion, and perhaps half the sum spent—at least a large portion of it—will not be worth a penny to the country at large or to the people in general. But we are not growing. It is no more our business than it is that of every other citizen. Yet we believe those who spend the public money should exercise the prudence of good business men and consider the need of the expenditure and the reasonableness of it, as well as the probability of profitable returns to those who must pay it. The people are willing to pay, but they have a right to ask what they are to receive for their money, or in what way the state or nation is to be benefited by it. Congressmen and legislators vote appropriations they would not begin to do if it were a private business transaction.

ENTERED AT THE INDIANAPOLIS, IND POST OFFICE AS SECOND CLASS MATTER, UNDER ACT OF CONGRESS, MCH. 3 1879

Vol. 17

INDIANAPOLIS, INDIANA, APRIL 1, 1914

No. 7

A Nation's Hope

Who are the men of the morrow?
Seek ye the boys of today!
Follow the plow and the harrow;
Look where they rake the hay.
Walk with the cows from the pasture;
Seek 'mid the tasseled corn;
Try where you hear the thresher
Humming in the early morn.
Who are the men of the morrow?
Look at your sturdy arm!
A nation's hope for the future
Lives in the boy on the farm.
American Agriculturist.

After asking a neighbor after his health, follow it up by: "How's your seed corn?"

The Community Club was never meant for knocking, so don't try to use it in that way.

Now cometh the days when the man with a manure spreader realizes the true value thereof.

Paint properly made and applied is a real force for making life on the farm more worth while. Spruce up.

Those farmers who produce a superior quality product of any kind will find advertising a profitable thing.

There should be a tile-ditching machine in every community, and a good idea is to buy one on the co-operative plan.

Cow testing associations seldom fail to greatly increase the net profits of the community? Let there be more of them.

Soil does not necessarily have to be sour to make an application of lime profitable. Lime has many valuable uses other than sweetening sour soils.

Who'd ever thought we would ever be reduced to buying China eggs to eat? Yet that's eggs-actly what has happened. And they come from Shanghai, to boot!

Who's raising all the row about the scarcity of calves? Since the slit skirt came in fashion there's plenty of evidence that there's just as many calves per capita as ever.

There are still plenty of farmers old-fashioned enough to wear "hickory" shirts of the kind we pull on over our heads—the kind that mother used to make. And they're good shirts, too.

The time it takes to make a trip to the neighbors to borrow a wire-stretcher—and then to return it—would pay for one. The most successful farms are the well-equipped ones.

Another opportunity for practical and profitable co-operation, in a country where available limestone abounds on many farms, is to buy a portable limestone crusher and grind lime for the farms. It can be done in this way at a cost of from \$1.50 to \$2.00 per ton.

And now Congress has discovered that in importing Argentine corn we have also imported a new corn pest known as the Argentine weevil, and some Congressmen asked for \$100,000 to fight the pest. It would seem that the better way would have been to keep out the corn.

Inadvertently the poem of Berton Braley's, entitled "The Slogan of Success," which occupied the head of this column in our last issue, was printed without giving the copyright notice and credit to Farm and Fireside, in which paper the poem was first published and copyrighted. (We 'polo-gize, neighbor, for our oversight.) Anyway, it is a bully good poem. Better read it again.

Only the Vicious Dog Needs a Muzzle

It is the abuse of power that calls for its control by limitations of the law. No anti-trust or anti-combination laws would have been placed upon the statute books but for the abuse of power. This cartoon illustrates graphically the argument made in the article on this page, entitled "How Monopolists Manage the Masses." Read it.

How Monopolists Manage the Masses

NO LESS prominent a publication than the Saturday Evening Post says after the pending anti-trust bills become laws any two or more persons in the United States who "make any agreement, enter into any agreement, or arrive at an understanding by which they, directly or indirectly, undertake to prevent a free and unrestricted competition among themselves, or among any purchasers or consumers in the sale, production or transportation of any produce, article or commodity," shall be deemed guilty of a misdemeanor and be punished by a fine not exceeding \$5,000 or imprisonment not exceeding one year, or both.

The Post takes the position that the primary object of every co-operative association of fruit and vegetable growers in the United States is to prevent competition among the members. It is to keep them from dumping their stuff, individually and competitively, helter-skelter on the market that the association is formed, says the Post. Also the primary object of every labor union is to prevent competition among the members—to fix a union scale and stick to it, so that one workman will not be underbidding another.

"As we understand the English language," says the Saturday Evening Post, "and the decisions so far given by the Supreme Court in interpreting the Sherman law, every farm-

er who belongs to a co-operative marketing association and every workman who belongs to a labor union will be liable to a fine of \$5,000 or imprisonment for one year, after this bill becomes a law."

We do not make these quotations from the Saturday Evening Post, a non-partisan and unprejudiced, but very popular publication, for the purpose of alarming or discouraging farmers and laboring people, but to show the duplicity in the laws that are being enacted. No one has asked for laws to prohibit farmers from organizing to establish a better system of marketing, for all recognize the great benefits that may be derived by both producers and consumers in better marketing and distribution. The only restrictive legislation of this character that has been asked for is to restrain harmful combines called trusts that monopolize the markets in such a way as to rob both producers and consumers. But, as in the case of the money power, the absorbers of the nation's wealth, these people are shrewd, and they see to it that any legislation that affects them shall affect the masses also. And if the monopolists are prosecuted they will see to it that the masses are likewise prosecuted.

At the same time we appeal to farmers to continue the work of organization. It is absolutely necessary to the success of agriculture. Farmers cannot support themselves and fami-

lies without some means of getting the worth of what they produce, and the consumers of farm products cannot live unless there is better and cheaper distribution thereof. Consumers must get their supplies from the districts of production rather than from the city market centers, where every hour adds to the cost.

We insist that organization to accomplish these good purposes is not in violation of any laws that now are or may hereafter be enacted, but we want our readers to know how almost certain it is that selfish interests protect themselves by slipping in language that makes the laws apply to the innocent as well as to the guilty. It is easy to see how they thus protect themselves. It is so with many of our most popular laws, laws enacted or bills pending. The features asked for by the people are heralded broadcast and brought before the public in all sorts of deceptive forms, but somewhere hidden in the measures are provisions that neutralize the good and make the whole thing bad in its effects. We appeal to honest lawmakers to watch these insidious "jokers," as such provisions are called, and we wish the people to know that many measures they believe to be good have cunningly devised evils that outweigh the good. Be not chronic faultfinders, but watch for the hidden evils. The masses of the people must be more thoughtful, more watchful, and more independent, and the road to that attainment is concert of action through organization.

What Others Say

"Test every seed you intend to plant."—Better Farming. This advice sounds just a little like more enthusiasm than judgment.

"There are three kinds of farm papers—good, bad, and indifferent."—Campbell's Scientific Farmer. Well, then, all claissees of farmers ought to find papers to suit.

"In reading his farm paper the average farmer runs across scientific words and expressions the full meaning of which he does not know."—Farm Engineering. When he does it's ten to one he's reading an extract from a government bulletin.

"It is indeed amusing to watch the little clouds of dust that politicians raise here and there to hide something or fool somebody."—Successful Farming. It isn't so funny, though, when they succeed in throwing the dust in your eyes.

"The quicker we get that fundamental principle of Christianity, the spirit of co-operation, into our system, the better it will be for our pocket-books."—Wallace's Farmer. That's good doctrine, brother Wallace. But we've been trying hard to get some system into co-operation.

"The more commission merchants there are selling your grain the greater will be the competition among them, and the more sure you are of the most elevated possible price."—The Co-operative Manager and Farmer. We cannot see it that way. The more competition the lower the price, and the greater expense.

Changing "Struggle" to "Success"

A Poor Immigrant Who by Thrift and Industry Won an American Wife and Two Fine Farms in Ohio—By L. Johnson

IN 1870 Crist Phillippi, a lad from Alsace-Lorraine, with fifty dollars capital, came to the Land of Opportunity. In 1880, married Minnie Durr, an American girl, "The best wife a man ever had," his yesterday's and to-day's verdict. In 1880, with his wife—chief asset—and \$1,900, the savings of ten years, he undertook the task of paying for a seventy-six-acre farm four miles west of Columbus, Ohio. In 1913, the owner of two farms, he is able to retire if he so desires, but the love of work is still lustily calling, and so, shoulder to shoulder with his son Jonas, a partner in every sense, he stays upon the home place. Mr. Phillippi sees nothing remarkable in his success-crowned efforts. In fact, he assured me that "A man now has a better show on a farm than ever before."

The love of the soil is inherent with Mr. Phillippi, for he comes of the sturdy land-working and land-conserving French. He came to America to better his condition, not through city life, but through farming as his training and inclination held that prosperity faced a man in the country as well as in the city.

The first two years he worked upon a Lancaster county (Pennsylvania) farm, receiving twelve dollars a month and board; all the while he "heard the West a-callin'", and with his savings started for the pioneering lands. When he reached Columbus, Ohio, he stopped off to work a while so as to add to his savings.

He secured work in the brickyard of a Mr. Thomas, who owned several farms, one having the brickyard within its confines. When the cows would be driven in for the evening milking Mr. Phillippi would go down to the stables to talk with the men and would also help with the evening's work. This proceeding was, of course, wholly different from that of the rest of the brickmakers, who were mostly foreigners—not like himself, but of the kind who do their stint of work and no more. After watching young Phillippi at his regular work and sizing up his voluntary talk and work with the farm hands, Mr. Thomas asked him how he would like farm work. Let him tell his answer as he told it to me.

"It was just what I wanted, and I told Mr. Thomas so. He hired me at fifteen dollars a month for six month's work and twenty dollars a month for the other six, the twenty dollars for the busy season. This was the highest wage paid at that time. I worked for him for eight years. Then wife and I were married and started out for ourselves. Mr. Thomas was my friend as well as employer, but I held

that it was a man's place when he was married to try and better himself, and the best way to do that was to be his own employer.

"This place of seventy-six acres was overrun with weeds and the greater part of it in young woods, but it was close to a growing market and the soil was good. It was held at \$3,700 and I had \$1,900; the balance, \$1,800, was secured by giving a mortgage. I made myself feel that while it was a load to carry to begin, it would turn into an investment to carry me if we kept our health. When the debt was about cut in half two of the children took sick, and I came down and lay for months, part of the time not being expected to live, but I pulled through"—a pause, then, "my wife is a good nurse," and the eyes of the man and wife met, her's tear-dimmed, for the memory of such trials can be re-lived by women, his glance telling the story of love increased by the passing years.

There Is Charm and Contentment on the Face of the Fields

"It was slow work, but finally all the trees, except those kept for pasture shade, were dug out, and the weeds pretty nearly conquered. It was a daily fight, but a farm is made for work and by work.

"It has always been partnership between my wife and I; she looked after the butter, eggs, poultry and garden, and I did general farming. Let Minnie tell you her part."

"I have always believed," said Mrs. Phillippi, "that first-hand customers were the best, so in starting out I aimed for direct marketing. The first day I started out I had several one-pound rolls of butter, some cottage cheese, several dozen eggs, a few chickens, and some onions and radishes from our garden. I drove to the city, picked out a homelike street and went from house to house. I soon sold out all I had, and many asked me to come back the next week. It wasn't long until I had a nice trade built up and chances for more customers than I could supply. As I could I added other things, beans and peas and such things from the garden. The children and I would gather them late the evening before or early in the morning before I went to town. I think it best to have everything ready the night before except the vegetables, which shouldn't be gathered until the last possible moment.

"Upon my twice-a-week trips to

town with butter, eggs and chickens I always carried a supply of cottage cheese and buttermilk. Apple butter has always been a good seller, too. I would also take in the extra fruit. Each week I would take orders for the next week's delivery and for heavier things, such as potatoes and apples, which Mr. Phillippi would deliver. All this was hard work, but I didn't mind, for we were getting clear of debt, getting able to give the children comforts and a start in life and saving for a protected old age. Then, too, we were steadily working toward the goal of our ambition—a dairy farm."

"When Minnie would have it easier," interrupted Mr. Phillippi.

"Crist has always made it as easy for me as he could," proclaimed the wife. But that I did not need to be told, for hadn't I eyes to see and ears to hear tones in voices which tell so much?

Mr. Phillippi believes that for dairy-

ing Holsteins are the best. The herd which he and his son Jonas own now numbers thirty head, many of which are thoroughbreds, a number grades, and three Red Shorthorns. Last winter they weeded out eight and will continue improving until none but pure bred Holsteins are owned.

They have found that a cow if given generous feeding, all the water she wants, attention to her bodily comfort, and treated with kindness, will increase in value. Tab is kept upon each cow's milk yield, and those not giving adequate returns are being gradually weeded out. Some of the cows they now own give seven gallons a day, some six and five, and a couple as low as four gallons.

When asked how he cared for his land so as to have it yield best returns, most of which are used directly upon the farm in feeding the stock, thirty cows, two work and one carriage horse, he replied:

"We plow up clover sod and put it in corn first year; after corn is harvested we put in wheat, then clover and grass. We only fertilize in wheat, using high grade commercial fertilizer which costs \$22 a ton. We allow a ton to five acres; if any is left we put it on the corn land. We also top-dress the wheat with manure. We find that manure applied direct from the stables secures best results. Rotating our crops as we do saves our having

to use much commercial fertilizer. Our land is getting richer all the time, as our herd builds up the land as well as being a direct income producer.

"We use our corn for the silo. Now, sometimes people will say, 'A silo does it all,' but it will not do everything alone. Other foods are necessary; malt, cotton-oil meal, or bran and middlings as a filler. We find malt, either dry or wet, satisfactory, but if one cannot get malt, cotton-seed meal, one pound to each cow twice a day, will give splendid results. We never feed cabbage, beets or turnips, as these make the milk taste. We do not measure foods, but feed what we judge is each animal's requirement. We feed heavy, for if one stints the cow she isn't getting a square deal and can't give good results. Cows need plenty of food, a generous supply of water, good shelter and kind care. Everyone of these pays, and pays well. At each feeding we give a generous allowance each of silage, ground oats or bran on top of silage, and a scoopful of malt on top of these. There is no necessity for mixing. We do not have running water in the stable, but the cows get all the water they wish, as they are not tied up after feeding.

"In winter they get about three hours' exercise unless the weather is too bad. They get water twice a day. We warm the water for them, having a stove in the tank. Getting the water lukewarm acts with them like a cup of warm coffee does to a shivering person."

The stable has concrete floors and mangers and free-acting stanchions. Everything is conveniently arranged. For instance, the chute from silo is at one end between rows of cow stalls and a large concrete bin holding malt at the other. The horses and cattle are kept wholly separate. The small dairy house to the left of the barn is floored with concrete, in the center of which the aerator is kept. A constant supply of fresh water for the stock is supplied by the windmill and an ingenious direct pumping arrangement. A splendid orchard and garden put one in mind of an Eden; plodding ranks of white ducks and flocks of bustling Rhode Island Reds tell a tale of what revenue producers a farm can keep as "side lines"; a cozy home with conveniences such as inside water and a furnace; a gentle, sweet-faced woman, charming children and the sturdy ex-immigrant tell a story of what hope and grit, common sense and a goodly supply of hard work can accomplish, for, as Mr. Phillippi says:

"There's nothing strange about it. It's something anybody willing to study and hustle can do."

A Heifer of Great Promise

EDITORIAL

Rural Credit as It Is and Isn't

WWE HAVE a letter that we appreciate very much from an intelligent reader of UP-TO-DATE FARMING, Mr. Otto Bentzen of Wausa, Neb. Mr. Bentzen was born and raised on a farm in Denmark, and he naturally favors a rural credit system, but of course he has in his mind such a system as the one that prevails in his native country.

We are not opposed to rural credits as such. Farmers are entitled to the use of money on more favorable terms than any other class of our people, for they are the greatest creators of wealth in the world. But in this country it is a fact that a startling few of our people get possession of and control the money of the country, and thus make subservient to them the great mass of our farmers, laborers and business men. A rural credit system devised by that class of people and designed to increase their power of absorption and to put into their control elements of the nation's wealth and independence that they have not heretofore been able to reach—that is what we oppose, and we do it conscientiously and with deep conviction. A system that provides for the issue of bonds on groups of mortgages, the bonds to go upon the market and become commodities for speculation on the boards of trade and exchanges, as other bonds and securities are, would be disastrous to the wealth and independence of the farmers of the country.

It is true other systems of rural credits are suggested. For instance the National Grange at its meeting last September adopted on this subject the following resolutions that have since been indorsed by the National Farmers' Union and American Federation of Labor, and perhaps by other organizations:

Resolved, That it is the opinion of the National Grange that any legislation for the purpose of bettering farm credit is a part of the great national policy of conservation of food supply, and as such it can not properly be delegated to private capital for general exploitation and profit.

Resolved, That any farm credit plan which does not include a direct reduction of the prevailing rate of interest, as well as a long term of small annual payments upon farm mortgages, will not meet agricultural credit requirements.

Resolved, That the Government of the United States should borrow money at a rate of interest not to exceed 3½ per cent and lend the money at a rate not to exceed 4½ per cent to the farmers upon long-time farm land mortgages with such restrictions as may be necessary to make the Government perfectly secure, and the profit of the Government to be expended in road improvement or for some other object that will benefit the whole people.

That is very different from the proposed system now before Congress, and Mr. S. H. Hobbs, chairman of the

legislative committee of the Farmers' Union, informs us that these farm organizations are bitterly opposed to any legislation creating a new system of private banks in the name of agriculture. They do not believe that government loans to bankers to lend to farmers will be a proper solution of the question. Neither do we, but in this country the money power controls financial legislation, and for that reason no law of that kind will be enacted by Congress which has not something in it somewhere for the benefit of that power. The scheme now before Congress is a most deceptive one, and it is advocated under cover by the same power that has won so many congressional victories that have been

control of the storage of grain, the warehouse trust, he declared, had built up an organization which controls the wheat prices of the world. The key to the situation, he said, is dealing in futures where no delivery was intended, and in this business the Chicago Board of Trade outstripped the other markets of the world combined. Mr. Greeley affirmed that public warehousing in Chicago is conducted "openly and brazenly in violation of law so as to crush competition, and that it has no organized opposition of the legal authorities of the state." It is recognized, he asserted, that 95 per cent, at least of all cash grain which has entered public storage has for many years been controlled by the illegal operating warehouse proprietors.

These publicly asserted facts, equal almost to sworn testimony, ought to take deep hold upon the minds of the people. Under such circumstances what hope can the farmers have for a fair reward for their labor? And as these institutions control the price outward as well as inward, what hope can consumers have for equitable prices

the American farmers to so change their system of marketing as to supply the interior demands. It is a notorious fact that under the old marketing system goods produced in the interior went to the general markets, largely to the sea coast cities, and from there were sent back to the interior, and but imperfectly supplied the general demand. This, of course, reduced consumption and depressed prices. If the farmers will organize so they can market systematically, and send the stuff directly to the demand, the result will be better and surer prices to the producers and reduced cost to the consumers. Thus all the demands may be supplied and consumption materially increased, and we believe the effect of foreign competition may be largely overcome. At all events the farmers will be making the best of an adverse condition, and will prove themselves capable of overcoming evil with good.

"Increased production, however, should not be penalized. Fruitfulness should not be fined as an offense. Something more than the law of supply and demand is responsible for the fact that a 15,000,000-bale crop of cotton brought \$730,000,000 in 1911 and less than 12,000,000 bales brought \$820,000,000 in 1910. The want of an organized market, the lack of concerted action, is responsible for the fact that more than 3,000,000 bales of cotton were worth \$100,000,000 less than nothing. Increased production must be accompanied with improved marketing facilities."—Senator Gore of Oklahoma. Even a blind man can clearly see the great need for an organized, co-operative marketing system.

Lifting the Embargo

Read "Monopoly Price-Making" on This Page

deleterious to the masses of the people. A campaign to make the scheme popular is now being waged in the ready-print sheets used by many local papers, and the articles appear under the most deceptive headings. The power of evil is always a power of deception. The danger in this is the land-bond scheme—the bonds issued on combined or groups of mortgages. We trust our correspondent and other readers now understand our position. For a fuller discussion we may refer to the article in our issue for February 15, "The Dangers of Debt."

for the breadstuff they are compelled to buy? This is a nation wide issue, but it involves those interests which the governing powers seem loth to antagonize. The remedy after all is with the people.

When Laws Are Enacted

ANY free American citizen has a right to discuss measures or bills that are pending before Congress or the state legislatures, and he or they may oppose those bills if thought to be unwise or evil in their effects. But when those bills become laws the case is different. The dreaded evils may be there, and every reason for opposing them may still exist; but the law-abiding citizen must obey the law. Gen. Grant said the best way to secure the repeal of a bad law is to enforce it. But while it is a law it must be obeyed. The thing is to accept the situation and make the very best of it. That may be said of some laws that have recently been enacted.

For instance, if it is true, and it is, that practically the farm products of the world may come to our markets in competition with what our own farmers produce, it is up to us to meet the evil in the very best way we can. Most of the imports will come to the coast city markets, and must leave the interior markets comparatively free. The plan, therefore, is for

Smile Awhile

Memorable

Wife—I well remember the night you proposed to me and I said yes.
Husband—Yes, we did some very foolish things when we were courting.

Not Outdone

"Mother, they all had speeches at the party last night."
"Poor boy! You had nothing to say."
"Yes I had. I stood up and said my prayers."

Doubt as to the Animal

"I see the papers call Tomkins a lion in public matters."
"Yes, but his wife calls him a bear at home."

Nature Outdone

Teacher—Name three natural causes of death.
Foot of Class—Hanging, sickness and accident.

Just Weight

Farmer—I tell you that pound of sugar you weighed for me seems awful light.
Grocer—Oh, no, it must be just right, for I used as a weight the pound of butter you sold me just now.

The Reality of It

"What have you been doing to the baby?"
"We were playing getting ready to go to church, and he was my husband, and I had to wash his ears and neck."

Reverse Action

She—I believe you married me just because I had money.
He—No, I married you because I didn't have money.

Needed Another

Wife—Willie, dear, be sure to bring a rat trap when you come home tonight.
Husband—Why, I brought one last night.
Wife—Yes, but that one has a rat in it.

Teaching Teacher

It was an arduous task for the teacher to drill into one of her youthful pupils the principles of arithmetic.
"Now listen," she said. "In order to be subtracted things must be of the same denomination. You can't take three apples from four peaches, nor eight marbles from twelve buttons. It must be three apples from four apples, and so on. Do you understand?"
"Please, teacher," he inquired, "couldn't you take three quarts of milk from two cows?"

Monopoly Price Making

WE are glad that price making is attracting public attention. Everything that is made or produced to sell must have a price, and the profit, benefit or reward for the producer is in the price. Therefore, whoever makes the price determines the reward the producer is to get. It is gratifying to note, therefore, that the question of who makes the price and the interests that govern it is at last receiving a degree of public attention. The House Rules committee at Washington has been inquiring into the matter, and important statements have been made before the committee. Benjamin Drake of Minneapolis declared the chamber of commerce of that city "is a private market, a monopoly opposed to the interests of

the producers, owned by banks and elevator and milling companies, who, therefore, had control of the market, wheat mostly, and whose interests were best served by making the price to farmers "as low as possible." Magnus Johnson, of Kimball, warned the committee that the question of the grain monopoly would become a national political issue if relief were not soon granted to farmers.

But Mr. Samuel H. Greeley, who for more than twenty years was himself a member of the board, was even more emphatic in his statements. He urged Federal action against the monopoly, which he said was maintained by the public warehousemen of Chicago and other market centers. Through memberships on the Chicago Board and

How I Handle the Corn Crop

THE SEASON for starting the corn crop is here and, like horse racing, getting a good start is a very important matter. Corn is a plant that revels in warm, moist soil. Whatever merit there may be in the doctrine of tillage being manure there is virtue in tillage to secure warmth and abundance of plant food available for the corn crop. The extra early bird that gets the worm should not serve on the coat of arms as a model for the corn grower. There is no cultivation of corn so effective as the work done before planting to prepare the seed bed. My experience in growing this crop covers a period of more than thirty years, some seasons raising as high as one hundred acres and I will give a few ideas regarding the production of the same.

It pays to build anything on a good foundation, and one that will not endanger the success of the business later on. Ice is solid enough for a foundation when the thermometer is 40 degrees below. But it hasn't the lasting qualities of stone. A lot of poor seed corn will fill the planter boxes just as well as any, but it won't fill the crib. The seed must have the qualities that last right through the season, and the corn husker is, after all, the best seed tester. When you pick your seed ears in the fall, you begin your foundation for the next year's crop. But no matter how much care you exercised then, test your corn in the spring, every ear of it. What you must have is vitality, and that means more than just ability to sprout. It means the sprouts should come right out, strong and vigorous. Know your seed before you plant it. Millions of bushels of corn are lost every year on account of poor seed, and it is all purely needless waste. Testing the corn is not a very difficult task. What is known as the "Rag Doll" method is as good as any, costs practically nothing, and can be made by any one in a few moments.

My idea in producing a good corn crop is to have clover sod ground or land well fertilized with barnyard manure. I have produced six consecutive crops of good corn in one field by giving the same a light coat of manure every spring with a manure spreader. There are some times occasions, however, when the clover sod is lacking and the quantity of stable manure insufficient to go over the field as one would like. What the clover sod and manure calls for in the final analysis is fertility chiefly, nitrogen and warmth. When the corn plant has that dark green color that comes from sufficient nitrogen and heat under normal conditions a good crop is assured. A commercial fertilizer strong in nitrogen and phosphoric acid makes a valuable substitute for the ideal condition of clover sod and stable manure. The way to find out is to try it. If a man has not the clover sod and stable manure he can buy its equivalent in plant food elements before and after planting.

Successful Corn Growing in the Corn Belt--By John Underwood

I used to be an advocate of early planting, but now I believe that this is all wrong. Unless the season is unusually early, which is not often the case, the 20th of May is early enough to commence planting. Then the ground is warm the corn comes up immediately and will grow as much in a day as it will in three days when the ground is cold. In planting I use a two-row planter.

With an edge drop planter the first season a good many years ago I accumulated a large assortment of planter plates, hoping to have the same results in dropping an even number of grains of corn that the machine did at the state fair exhibit. A different set of plates was tried and then another and the planter seemed to be working the shell game of now you see it, now you don't. The number of

grains to the hill was as varied as the reasons for high prices of farm products. The difficulty was not in the planter, but in the sizes of the corn grains. The remedy was grading the seed corn and really no edge drop planter ought to be used on ungraded seed corn. I am strongly of the opinion that more real merit in producing the maximum bushels of corn to the acre lies in grading the seed corn than there is in detasseling or the seed corn plot or in many of the so-called pure-bred pedigreed corn samples. A corn grader is an inexpensive affair and as simple as a meal sieve. My check row planter drops three kernels. When the corn is graded my machine will drop three grains every time. Good seed is one of the most important factors in the production of a good corn crop.

For the past few years I have been making it a practice to order my seed from seedsmen and have so far not been disappointed in the quality of the seed purchased. If one deals with a reliable seed house he can rest reasonably assured of getting just what he pays for. I have had a good deal of experience in dealing with firms advertising in the UP-TO-DATE FARMING and the results in every case have been satisfactory to me. Care should be taken to get seed that is adapted to the climate one lives in. This is a matter that counts for more than some people might suppose. Just before the corn comes up I harrow it so as to loosen up the soil and kill as many of the small weeds as possible. I have found that it will do no harm to harrow after it is up nicely so that the rows can be seen both ways. But should one not wish to harrow the corn after it is up, in every case I believe the harrow should be run over the field just before the plants begin to come through. I use a light spring tooth harrow for this purpose. In working the corn the first and second time with the cultivator I am very careful to see that the work is well done. I like to get very close to the plants and see that the dirt rolls around every hill. After the corn has reached a height of a foot or over the fiber roots start and I get farther away from the hills then so as not to injure them. There is some difference in opinion as to how many times corn should be cultivated. I think this depends on the growth the corn is making and the number of weeds present. As a rule I cultivate four times, but should there be many weeds growing after the fourth cultivation I give the fifth plowing in order to subdue them. However, I never like to cultivate after the corn is three and a half feet high. In giving the corn the two last cultivations I widen out the sections on the cultivator nearly as wide as possible so as to not harm the fiber roots, which reach well toward the center of the ground between the rows. The right kind of cultivation means to make a dust mulch and to maintain it after it has been made. I never ridge my corn in any case, because this would cause the loss of

(Continued on Page 8)

The ear at the left is not good—kernels too large and rows separated; should be discarded. The ear at the right is excellent.—Shelling Seed Corn.

The Passing of the Wash Tub

THE WASH TUB must go! That instrument of torture, which has filled the days of the farmer's wife with despair and her nights with troubled dreams, is doomed. The "back to the land" movement gets much of its impetus from the fact that better things now obtain in the farm home than ever before, but no message more potent for joy and comfort has ever been borne to the rural regions.

Long years ago the scythe, the cradle and the flail were relegated to the junk heap. Today the farmer with gasoline or electric power to drive his machinery and perform the heavier tasks, with patent milkers, riding plows, etc., has eliminated much of the back-breaking work on the farm. For the farmer's wife invention has done but little. Her chief abomination

Relegated to the Junk Heap

is wash day, and the task of keeping the family clothes clean undoubtedly has been the rock upon which more than one household has split. Summer and winter the Monday session at the wash tub and Tuesday at the ironing table have taken their toll of her strength and health. The monotony of farm life, its never-ending round of household duties, and the lack of opportunity for mental or physical relaxation, have all had their effect on the country woman, and through her have reached down to the children.

It is believed that the conservation of the strength and health of the farm woman will do much toward checking the undesirable efflux of population from the country to the city, which is now generally recognized by farm economists as largely due to the conditions which obtain in the farm home.

The co-operative laundry will go a long way toward solving the problem by relieving the farm home of its heaviest burden. The practicability of the idea has been demonstrated beyond a doubt in the little town of Chatfield in Minnesota, where the plan originated. A co-operative creamery on much the same lines as the creameries on a number of the government irrigation projects throughout the west was in successful operation, and the superintendent divined the idea of

utilizing the same power to run a washing machine. An old churn, operated by a belt from the shaft which runs the creamery machinery, did the trick. The more progressive men in the company quickly seized upon the idea of extending the work to include the laundry for the patrons of the plant and up-to-date machinery was installed at a

cost of about \$4,500. The gross receipts for the first ten months were \$4,800. The farmers bring their laundry when they come with the cream and on their next trip to the creamery they carry home, ready for use, the week's wash.

The laundry bill is charged to the cream account and taken out of the cream check at the end of the month. Five cents per pound is charged for washing. All flat work is ironed in the mangle and no extra charge is made. The rough dry is ironed by hand and is charged according to the time it takes a girl to iron it, at 15 cents per hour. The Minnesota plant, at the end of the year, with 160 patrons, was able to pay back to each 10 per cent of their wash bill for the year, and the average cost per family was \$4.61 per month, which included

the laundering and ironing of their shirts and collars.

While this laundry does not add to the farmers' income, as the creamery does, it is indirectly a productive enterprise, lifting the heavy burden from the farmers' wives, saving them strength for their other duties, and increasing the efficiency and comfort of the farm home many times more than enough to recompense for the outlay of \$4.61 for eight days of back-breaking work.

Co-operative creameries have already been established on several of the government irrigation projects and it is hoped that the time is not far distant when laundries will be run in connection with each of these plants. The same power which actuates the machinery for the creamery can be utilized for the laundry work, and there is always an abundance of hot water and steam. In many sections cheap electric power from the government plant is available for such industries.

In view of the success which has crowned co-operative enterprises in other lines of the farming industry in these irrigated districts, there is little doubt but that this latest innovation for better conditions in the farm home will meet with the approval of the farmers.

Wished to Obey Orders

"Sister, you and Perkins stay up rather late, don't you?"
"Maybe we do, but last night I told him he mustn't see me any more."
"I'm glad you did, but what did he do?"
"He turned out the light."

Success with Clover

Clover is most valuable as it is a great soil builder, as well as a fine feed. A crop rotation should be practiced which includes clover or other legume once every four years. The successful farmers are waking up and taking to the modern methods.

We raise better crops every year, having much better success securing stands of clover than before. It is difficult to grow clover on clay soils which become sour. The application of lime will improve the texture of heavy clays, sweeten and render free and open for the entrance of moisture. My neighbors are liming their land. I use the ground limestone rock. It is fine. I got a fine crop of clover after it.

The method of sowing clover is of considerable importance. Three years ago, I sowed a field to clover. I scattered stable manure over the thin places, then I broke the ground with a two-horse turning plow March 15, rolled and harrowed it. I drilled 200 pounds of phosphate per acre and sowed one bushel of seed to eight acres and rolled and harrowed it again. It came up fine. The first year I mowed three crops of the finest clover I ever saw grown in this country. It yielded me four tons to the acre. I will not keep up cutting three times but will let the last crop lie on the ground and turn it under. It is better for the ground to leave it on. People are sowing more clover in this country than in former years, and you can see the land is improving wonderfully. I believe if every farmer will prepare his seed bed right he can get clover. My land was very thin, and some thought I was foolish. They were surprised when they saw the three fine crops the piece produced that year.—G. D. Richardson, Kentucky.

Profit-Paying Peppermint

The most profitable crop on my farm is a patch of peppermint, which occupies an area of muck land too wet and cold for other profitable crops. This land was plowed, harrowed and marked out about the same as for corn. From a neighbor I obtained three wagon loads of peppermint plants, at a cost of \$8 per load, and I hired a man to help set the plants. This labor cost me \$1.75. I ran a harrow over the ground every week to kill when small the weeds that grow so quickly and profusely on land of this character. I pull all weeds the harrow fails to destroy, for the fewer the weeds the greater the oil-content of the peppermint. I cut the mint in September, let it wilt and dry off a bit, but raked it before the leaves would drop off in handling, as the oil is in the leaves. Then hauled the crop to the distillery. I had three acres of mint, and after paying \$24 for the plants, \$1.75 for hired labor, 15 cents per pound for distilling, I had \$240 and the refuse from the distillery to pay me for my labor and the use of the land. I received \$2.50 per pound for the oil. These returns were so satisfactory I let the crop lay over for another year, when the returns were \$420, owing to the price going up to \$3.35 per pound. We made use of some of the oil at home. It is an excellent remedy for colds. I consider this the best paying crop, for money and labor invested, ever produced on my farm.—J. E. L., St. Joseph County, Indiana.

"Roads are put in repair most effectively by not permitting them to become bad. It is a mistake to put all the road work in at one season of the year. 'A stitch in time saves nine.' The road overseer who works the roads but once a year is too expensive to hire, even if he works for nothing."—Journal of Agriculture. There's more sense and real good roads doctrine in that paragraph than in some big books on the good roads problem. Use the split-log road drag sensibly and systematically.

Williams Quality Harness

The steady growth of our harness store—now the largest in the country—is due only to the exceptionally high quality we offer, at prices asked elsewhere for ordinary grades.

We want you to know all about our harness store—the reasons for its success—and the values we are now enabled to offer. Turn to the harness pages of our big General Catalog—or, if you prefer, write us a postal card and we will mail our new book of harness, saddlery, blankets, fly nets, dusters, robes, trimmings, whips. This book also contains our complete line of buggies, implements, team separators, gasoline engines, farm tools and other farm helps. If you want this new book free, simply write on a postal card "Send me your Harness Book No. 65U68"

IN THE face of an advancing leather market we still use the genuine bark tanned leather which has made Williams Quality mean the best in harness for the least money.

Our fair and square methods of manufacturing and selling create and hold in the minds of our customers the strictest confidence. Hundreds of horse owners who use harness daily will have none other than the celebrated Williams Quality.

Our guarantee proves our confidence in our merchandise, guards our customers against disappointment and protects them against loss.

Turn to the harness pages of our big General Catalog, or write for the special book mentioned at the left.

Co-operative Creamery Building

DURING recent years there have been many failures in the creamery business due to various reasons. In many instances promoters have started farmers' co-operative associations and caused them to erect creameries when there were not sufficient cows in the community to warrant the erection of a plant. These promoters have also been charging the farmers enormous prices for machinery and buildings. In most instances the choice of machinery has shown a decided lack of knowledge concerning modern creamery practice, the main object of the promoter being to sell the machinery whether it were needed in the creamery or not. In several of the propositions which have been brought to the writer's attention the promoter was asking from two to three or more times the price for a plant that it should cost ordinarily.

A community should have at least 400 cows actually producing milk tributary to the creamery in order to make a creamery pay running expenses. A creamery to handle the output from that number of cows should not cost over \$2,500 complete and in many instances could be erected for much less. The cows which people say they are going to buy or bring into the community should not be depended upon because 400 cows are needed from the start.

Before completing the creamery the community or individual should also consider as to whether there would be a satisfactory and convenient market for the output. The ability to secure and hold a market depends to a great extent upon the ability of the manager and butter maker. Too often men are employed who have not had sufficient dairy experience and who lack business ability. The State Department of Dairying would gladly give assistance to those who wish to start a creamery and need help in selecting size and kind of machinery as well as to plan the building. The promoter in no instance should be allowed to build the creamery for a co-operative association without a thorough investigation of his proposition as to prices, kind of machinery and general creamery plan.—G. E. Frevert, Dairyman, University of Idaho.

HEAVY LOADS CAUSE BAD ROADS

The Massachusetts Highway Commission, after a full investigation, officially states that the greatest cause of the destruction of modern roads is not

the automobile, but the heavily loaded vehicle drawn by horses. In two instances, fifty to seventy-five ice teams a day, carrying three tons or more each on 2½-inch to 3-inch tires, broke up within a month the side of the road on which the loaded teams traveled, while the surface lasted three months on the other side where the teams came back empty. For miles beyond the ice houses the roads are still in good condition. These roads are of macadam treated with heavy asphaltic oil.

The traffic study shows that it is not the number of teams, but heavy loads on narrow tires—that cause the failure.

A good gravel road will wear reasonably well under a daily traffic composed of 50 to 75 light teams, 25 to 30 loaded one-horse vehicles, 10 to 12 loaded two or more horse-drawn wagons and 100 to 150 automobiles. With a larger number of automobiles the gravel should be oiled.

Oiled gravel will stand fairly well under 75 to 100 light teams, 30 to 50 heavy one-horse vehicles, 20 heavy wagons with two or more horses, and 500 to 700 automobiles daily.

Waterbound macadam will stand under a daily traffic of 175 to 200 light teams, 175 to 200 heavy one-horse vehicles, and 60 to 80, perhaps more, heavy wagons with two or more horses.

Waterbound macadam with an oil and sand blanket will be economical with 150 to 200 light teams, 75 to 100 heavy one-horse vehicles, 25 to 30 heavy wagons with two or more horses, and automobiles up to 1,400. The large number of automobiles seems to keep the oil rolled down when it would cut up and crumble without this traffic.

Many million dollars a year are being spent to secure improved roads, and provision should be made by law to prevent them from destruction. The law should fix some maximum weight per inch width of tire in contact with the ground.

A PORTABLE HANGING SHELF

A step-saver that is appreciated in the summer time when many of the eatables must be kept in the cellar, and especially so on wet, rainy days if there be no inside entrance, is a box arranged as shown in the sketch.

The box may be of any size desired, but one about 18 inches square and 10 or 12 inches deep is about right, since it is only intended to hold such eatables that are most frequently wanted at meal time. By fitting it with two shelves, which with the bottom of the

Handy for the Housewife

box provides three, for the placing of butter, pies, cakes, etc. Have a hole sawed in the floor quite near one corner of the kitchen just large enough to allow the box to pass through. The top of the box is made to extend about an inch from the sides all around, so that when lowered to the cellar it serves as a trap-door or lid. This is done by nailing inch boards to the top of the box. By means of a rope and weight the box-shelf is raised or lowered with little effort. Arrange this by fastening two small pulleys in the ceiling, one directly over the top of the box and the other near the corner, so that the weight will not be in the way. Pass the rope through both pulleys, fastening one end to the top of the box and the other to the weight, for which one or two old window weights are excellent. When lowered the box serves as a first class hanging shelf in the cellar, so that its contents are safe from the reach of rats, mice, or cats.

How I Handle the Corn Crop

(Continued From Page 6)

Much moisture that is needed in the soil. Much moisture is taken up by weeds and when there is a good crop of these it is a sure sign that the corn should be cultivated. While this is a good sign I do not wish to be understood as saying that it is the only one. A field may have but few if any weeds in it and yet be badly in need of cultivation. It is well known by every one that a crust forms after a rain, and it is very essential that this be broken up as soon as possible after it appears. Care must be taken, however, never to stir the soil when it is too wet, as the fine particles of soil will mat together and the value of the dust mulch, which is so essential, will be lost. I never cultivate my corn more than four inches deep at any time from first to last.—John Underwood, R. R. 2, Tunnell Hill, Ill.

Marketing Lambs Co-operatively

WHEN EVENING SHADOWS FALL, THE FLOCK HOMEWARD TURNS

IN VIEW of the wide discussion of the effects of co-operation among farmers in marketing their products, the work of the Goodlettsville (Tenn.) Lamb Club, organized in 1882-83, and now in existence for thirty years, is of timely interest. The club was organized because the sheep raisers in the vicinity of Goodlettsville found that by banding together they could make larger offerings of more uniform lambs, utilize car space to better advantage, and by making available a larger number of good lambs ready for shipment on a single day secure greater competition among the buyers.

The Goodlettsville Lamb Club originally consisted of about one dozen farmers, and its membership has increased until it numbers eighty-five members. It has as officers a president and a secretary and an executive committee of three members, of which the secretary is a member ex officio. The club is not chartered and is in the nature of a partnership. Its members agree to abide by its rules and constitution. The president calls a meeting about April 1. Prior to this meeting its members have the privilege of selling lambs and wool at private sale. At the meeting, however, each member reports the number of lambs and the amount of wool he will have to sell through the club, and thereafter can no longer sell individually. After the report the executive committee has unlimited power.

This committee then determines the total number of lambs and date or dates for shipment. Ordinarily one shipment is made in the early part of June and another is scheduled for the early part of July. Last year's sales were dated June 10 and July 15. The first delivery is made up almost entirely of "firsts." The second delivery, which contains those that are too small for the first sale, is, as a rule, a poorer quality, as the old lambs do not make as great or satisfactory gains as the early ones.

There is little uniformity as to methods of sale. This year, as is often the rule, the wool was sold to a local woolen mill. It was graded in three grades—clean, slightly burred and burred—and sold for 23 1/4 cents, 20 1/2 cents and 17 cents per pound respectively. These prices average better than those paid by local buyers, but because the other wool sold to these buyers is ungraded it is difficult to compute the exact monetary advantage to the club members.

The sale of lambs through the club may be announced through the local papers, by means of posters or post cards, or by word of mouth. Following is a typical advertisement of such a sale by the Tennessee club:

LAMBS FOR SALE

The Goodlettsville Lamb Club will sell by sealed bids about 800 lambs. Bids close May 20. Lambs are to be

fat, merchantable lambs, weighing from fifty-five pounds up, and will be delivered from the 9th to the 12th of June. Club reserves the right to reject any or all bids.

The time between closing bids and the actual sale of lambs varies. Where bids closing on the day of sale are not satisfactory the club then ships its own lambs in cars previously ordered, and which the buyers have agreed to use if their bids are accepted. In some cases bids are accepted several weeks before delivery date, and the Goodlettsville club sold on futures this last season. Selling at or near the day of delivery is generally more popular with buyers.

On the day of delivery at Goodlettsville the lambs begin to come in early in the morning in wagons or in flocks. The driven lambs are marked with bright-colored paint, which avoids confusion where flocks become mixed. Lambs are put upon the scales, which are handled by the executive committee. Lambs lacking in condition or weighing less than sixty pounds are discarded as culls. Comparatively few are thrown out, however, as the growers cull their lambs at the farm. Of the culls, the greater part are those lacking in age and of small size, but there are also some large ram lambs that have become what is locally known as "staggy."

The president and one or two assistants weigh the lambs and credit each grower with his total weight. Delivery is commonly made before noon in time for loading. Payment is made on the day of delivery. The president or the executive committee pays the expenses, which are small, and apportions the balance among the members according to the number and weight actually delivered. The business of the day is followed by a dinner of the club, which adds a social feature.

In addition to the Goodlettsville club there are lamb and wool clubs at Mt. Juliet, Baird's Mill, Allisona, Martha and Flat Rock, in flourishing condition. These clubs each handle from 600 to 2,500 lambs per year. New clubs are occasionally formed, and these are generally successful.

"One dairyman who organized his herd according to instructions made \$94 more from ten cows this year than he made from fifteen cows last year. The average return per cow last year was \$32.50, and the cost per cow of all feed \$29, leaving a net profit of \$3.50 per cow, or \$52.50 for the fifteen cows. This year the average return per cow was \$58, the cost per cow of all feed was \$42, leaving a net profit of \$16 per cow, or \$160 for the ten cows."—G. A. Nelson, County Agent, Wahkiakum County, Washington. It would be interesting to know how prices of feed compared for the two years, also prices received for the products. Just where was the extra profit made?

A Guaranteed Introduction

Did a friend of yours ever introduce you to a friend of his and guarantee you would like him (or her)? Probably not. An introduction by a friend is enough.

But UP-TO-DATE FARMING, a friend of yours, introduces you to its advertisers and not only says they are good people to know, but guarantees they are good to deal with.

If it's advertised in UP-TO-DATE FARMING it's O. K. Read our guarantee below.

THE BOHON WAY

FROM FACTORY TO YOU

SAVES \$25 TO \$50

This is not a saving on paper only, but a saving in real money. I actually sell you from my factory any of my Buggies for the same money or even less than the dealer pays for a similar vehicle when he buys to re-sell to you. I could sell to the dealers and make just as much profit as I make when I sell to you. But you would have to pay the commissions, profits, the wages and expenses of the jobber, the dealer, their salesmen and clerks, etc. You would pay \$25 to \$50 more for the same Buggy, yet I would not make a cent more than I do this way. It therefore pays you to buy from me.

You take no risk when you deal with me direct. If anything is not right with your Buggy, you do not have to go back through three or four different hands to reach the manufacturer. You come right straight to me with your troubles and I will make them right. When you buy a Bohon "Blue Grass" Buggy you buy it on

30 Days' Free Road Trial With An Unlimited Guarantee

Try it on your own roads—no matter how rough—and if it is not satisfactory, if it is not all I claim for it, you ship it back and keep your money. I will pay the freight both ways besides and you don't lose a single cent. To make you feel doubly sure about this I have deposited in the Mercer National Bank of this city a legally executed Bond for \$30,000 to back up my guarantee. And that guarantee is as broad as I can make it. If AT ANY TIME my Buggy shows any defect of material or of workmanship I will make it right without a cent of expense to you.

All this and a lot more is explained in my

Big Free Book

which I want to send you whether you are thinking of buying a Buggy this year or not. I think it's the finest Buggy book ever issued and I have spared no expense to make it valuable for you. All I need is your address and I will send the book in the first mail postage prepaid. It will just cost you 1c. for a postal card to give me your name and address. Don't put it off—you might forget—but send that postal NOW.

Harrodsburg, Ky.

What a DE LAVAL Cream Separator SAVES over any other separator or creaming system

Quantity of cream that no other separator will recover completely, particularly under the harder conditions of everyday use.

Quality of cream as evidenced by De Laval butter always scoring highest in every important contest.

Labor in every way over any gravity system, and also over any other separator, by turning easier, being simpler, easier to clean and requiring no adjustment.

Time by hours over any gravity system, and as well over any other separator by reason of greater capacity and the same reasons that save labor.

Cost, since while a De Laval cream separator may cost a little more than a poor one to begin with, it will last from ten to twenty years, while other separators wear out and require to be replaced in from one to five years.

Profit in more and better cream, with less labor and effort, every time milk is put through the machine, twice a day, or 730 times a year for every year the separator lasts.

Satisfaction, which is no small consideration, and can only come from knowing you have the best separator, with which you are sure you are at all times accomplishing the best possible results.

Easily proven. These are all facts capable of easy demonstration and proof to any user or intending buyer of a cream separator. Every De Laval agent is glad of a chance to prove them by a De Laval machine itself—without the slightest obligation on your part unless entirely satisfied.

If you don't know the nearest De Laval agent, simply address the nearest main office as below.

Live Stock Notes

Now is the time to keep a careful watch on the brood sows. Feed corn sparingly.

Nine out of ten sick hogs have the cholera, says the U. S. Department of Agriculture.

Constitution is the great thing desired in your breeding animals. See that you get it.

Plan ahead for forage crops. An abundance of feed makes profitable stock of all kinds.

Feeding right is of no less importance than breeding right. Two rights never make a wrong.

You feed your cows for milk. Do you feed your sows for the same? You should. Pigs thrive on milk.

Cows heavy in calf should be kept in big roomy stalls, all by themselves, for several days before calving.

The chief function of corn is to put fat on animals. Feed it chiefly for that purpose. Every plant to its place.

Pure water is what the prospective mothers of your pigs need, not greasy slops. Feed the slops to the other hogs.

Learn the pigs to follow a bucket of slop or milk. Then you need never lose your temper trying to drive a hog where it don't want to go.

Don't put an undue strain on that colt you are "breaking." And break in the old horses rather gently. It pays to take care of the Dobbins.

A work horse will do better work if fed only a very light feed of hay at the noon meal. Two parts oats to one of corn, with a little timothy or prairie hay, is good for the noon meal.

Those selling butter, cream or milk should always brush the cow's abdomen and moisten the surface of the udder of the cow before milking. To keep milk pure it must be kept clean.

Have a pen for the little lambs where the old sheep cannot go, but the lambs may enter at will. Put a little hay rack in it, and a trough for cracked corn, crushed oats and oil meal.

Don't feed young brood sows with the fattening hogs. It's a mistake. But feed liberally of the right material. Nine parts shorts, nine parts corn and one part tankage, by weight, is a good ration.

Cholera is not the only disease which carries off hogs. Worms are the cause of many a pig's untimely death, and not infrequently the trouble was believed by the owner to be cholera. Following is a most effective remedy for worms in hogs:

Santonin, 5 grains.
Aveo nut, 3 grains.
Calomel, 3 grains.
Sodium bicarbonate, 1 dram.
This makes a dose for a 100-pound hog. Use twice as much for a 200-pound hog and two and one-half times the amount for a 300-pound hog. Withhold all feed for eighteen hours before giving the dose.

The ounce of prevention is always worth the pound of cure. Not to take a chance is always the best. The following formula is an excellent worm preventative and general conditioner which should be kept in a covered place, dry, and accessible to the hogs at all times:

Glauber salts, 3 parts.
Sal soda, 3 parts.
Copperas, 3 parts.
Common salt, 3 parts.
Sulphur, 1 part.

These recipes are valuable to every hog owner. Put them where you can find them readily. Better still, have your druggist put up a supply of the preventative the next time you are in town.

The Servant Problem

"I know a man who has a woman to do his cooking, washing, ironing, housework, mending and cleaning, all for her board."

"I'd like to know how he got a servant on those terms."

"He married her."

FORMULA FOR BRILLIANT WHITEWASH

Half a bushel of unslaked lime, slake with warm water, cover it during the process to keep the steam, strain the liquid through a fine sieve strainer; add a peck of salt previously well dissolved in warm water; three pounds of ground rice boiled to a thin paste, and stir in boiling hot; half a pound of powdered Spanish whiting and a pound of glue which has been previously dissolved over a slow fire. Add 5 gallons of hot water to the mixture, stir well and let it stand for a few days; cover up to protect from dirt. It should be put on hot. Coloring matter may be put into make it of any shade, Spanish brown, yellow ochre, or common clay, etc.

It is well to always strain before using in order to prevent any gritty substance from getting into the valves of the sprayer and interfering with its proper operation. With whitewash thin and smooth no difficulty will be experienced.

90 Days FREE Trial The New Universal Cream Separator

The Greatest and Cheapest on the market. Sold under a positive guarantee direct to the consumer.

Latest improved, gets all the cream, runs light, easily cleaned. Durable, low down tank, so simple in construction that even a child can set it up and operate it. Nothing to get out of order. They fit fine and feel easy—no corns, bunions or aches. Write postal for book. The Sole of Steel, learn how to save \$20 shoe money. N. M. RUTHSTEIN, The Steel Shoe Man. Dept. 214 Racine, Wis.

POULTRY HINTS

(By Roy Swartz)

Get ready for the year's hatching. Make this year the best ever.

Get the nests ready; make them clean and comfortable.

Lay in a good supply of louse killer. Begin to select your eggs now.

Mark your best hens that are now laying and keep the eggs from these hens for hatching.

Eggs laid by hens of a marked degree of health and vitality will hatch out chicks that will mature and have both health and vitality and be prolific producers.

Select eggs of the same size, shape and color.

A uniform temperature of about 55 degrees F. is best in which to keep eggs for hatching. Turn or move the eggs about each day. Keep the small end of the egg pointing downward.

Don't forget to feed and water the sitting hen each day. This is a point that is very often neglected, but it is important because if the hen is not fed she will become poor and the result is she cannot warm her eggs properly, and there will then be a deficiency in the number of chicks hatched.

Be sure and dust her with a good louse killer every few days; also the nest. Don't remove the hen and chicks until the second day after hatching begins.

Keep an extra watch out for lice and mites as nothing is so detrimental to the health of chicks. Once they get a start it is hard to exterminate them. An ounce of preventative is worth a ton of cure in the poultry business.

EGG MACHINES

Single comb Ancona chickens are the most profitable crop I can raise, for the amount of money invested. I commenced keeping account of our poultry the 1st day of last February and continued until the 31st of July. The 1st of February we had fifty-two hens. We sold \$55.40 worth of eggs. Besides, we had all we wanted to use, and we were not stingy with them, either. We sold \$25 worth of chickens and killed all we wanted to eat, which was several, for we surely like young fried chicken. I have now 180 pullets, which, if sold at market price, would bring at least 60 cents apiece, or \$108. Besides, I have about fifty of the old hens left. My expense for feed was \$21.03 for the six months, so you see I have a nice balance.

Eggs \$ 55.45
Chickens 25.00
180 pullets (market price 60 cents apiece) 108.00

Total \$188.45
Feed 21.03

Profit \$167.42

I think the poultry business is the best proposition on the farm for the farm is the natural home for them, and I am sure if farmers would take an interest, get a start of pure-bred stock (I prefer Anconas or some other laying strain, for the most money, I think, is in the eggs) and treat the chickens as they should be treated, shelter and feed them right, care for them the same as other stock, they will pay a larger per cent than anything on the farm. They have so paid me.—Norma Bartlett, Indiana.

Are your early-hatched pullets laying? No? There's something wrong, then, either with your care or with the pullets.

There are no reasons why the poultry house and yards should not be clean and sanitary. There are many reasons why they should.

Now is the time to cut up that clover hay we kept telling you to save last summer for the purpose, and feed it to your chickens.

March-hatched pullets will make

5,918,098 gallons sold in 1913
1,536,232 gallons more than 1912

Polarine
FRICTION-REDUCING MOTOR OIL

Maintains the correct lubricating body at any motor speed or temperature. Lubricates all makes of gasoline motors.

The constantly increasing use of Polarine by thousands of motorists is indisputable proof of its being the correct oil for all makes and types of motor cars, motor trucks and motor boats.

STANDARD OIL COMPANY
(AN INDIANA CORPORATION)

Makers of Lubricating Oils for Leading Engineering and Industrial Works of the World.

players next November, and all through the winter, provided they are kept growing from the start.

A little neighborhood club in the country can supply a little neighborhood club in the city with fresh eggs via parcel post. Get together.

How many of you kept a record of your farm flocks the past year? How much profit did your hens make you? Count it up and send in the report.

Poor hatches, chicks dead in the shell and high mortality amongst those hatched is sure to be the portion of those whose flocks have not had sufficient animal food.

Physical culture for the fowls is easy. Hang a cabbage so they must jump to get a bite. Feed corn on the cob. Break an ear in three pieces and let biddy do the shelling.

Happy hens are the secret of success in the poultry business. What makes a happy hen? Getting what she needs when she needs it, by working for it, and people are built on the same general plan.

Lawyers and Doctors

Doctor—I never did admire the legal profession. You don't make angels of people, do you?

Lawyer—No, doctor; I must acknowledge the medical profession beats us in that respect.

A Wanderer

He was clearly a homegrown specimen, and I concluded he had never seen much of the country, so I said: "I suppose you have always lived right around here?" Gosh, no!" was the reply. "I was raised nearly two miles from here. You never can tell how far a man has wandered from his old home."

OWN A BUSINESS
WE WILL HELP YOU

"I made \$88.16 first three days," writes Mr. Reed, of Ohio. Mr. Woodward earns \$170 a month. Mr. M. L. Smith turned out \$301 in two weeks. Rev. Crawford made \$7.00 first day. See what others have done.

LET US START YOU

In Gold, Silver, Nickel and metal plating. Professor Gray's new electro machine plates on watches, jewelry, tableware and metal goods. Prof. Gray's New Royal Immersion Process latest method. Goods come out instantly with fine, brilliant, beautiful thick plate, guaranteed 9 to 10 years. No polishing or grinding. Every family, hotel and restaurant wants goods plated.

PLATERS HAVE ALL THEY CAN DO

People bring it. You can hire boys to do the plating as we do. Men and women gather work for small per cent. Work is fine—no way to do it better. No experience required, we teach you. Receipts, Formulas, Trade Secrets Free. Outfits ready for work when received. Materials cost about 10 cents to do \$1.00 worth of plating.

Our new plan, testimonials, circulars and SAMPLE FREE. Don't wait. Send us your address anyway. GRAY & CO., PLATING WORKS, Cincinnati, Ohio

Stewart Ball Bearing Clipping Machine

For Horses, Mules and Cows
It pays to clip horses and mules in the spring—they look and feel better, do more work, rest better and get more food from their feed. Clipping the flanks and udders of cows prevents the dropping of filth into milk. The Stewart can be used for clipping horses, mules and cows without change. It's the easiest to turn, does the fastest work, stays sharp longer and is the most durable. Get one from your dealer, or send \$2.00 and we will ship C.O.D.

PRICE for the balance, Money back if not well pleased.

STEWART'S No. 9 BALL BEARING SHEARING MACHINE \$11.50

gets all the wool and takes it off quickly and smoothly in one unbroken blanket. To shear with the Stewart Machine seems like play to those who have labored with hand shears in the old, hard, sweaty way. You don't have the same swollen aching wrists. You don't scar and disfigure your sheep with uneven shearing and spoil the wool with second cuts like you used to do. Get one from your dealer, or send us \$2.00 and we will ship C. O. D. for balance. Money back if you are not well pleased.

Write for FREE catalogue showing most complete line of Sheep Shearing and Horse Clipping Machines in the world.

Cash will be paid for all articles used.

A GIRL WHO MAKES HIGH-PRICED EGGS PAY

(Awarded First Prize of \$3)

I used to raise Indian Runner ducks and did very nicely with them, but after the boom in them wore thin, I thought I would invest in something of permanent popularity, and real value and utility with everybody. To keep ducks profitably one requires plenty of running water, but anybody, anywhere can raise a few chickens.

I am a young lady, and live at home

with my parents, but have the true American girl's desire for independence, so though my parents are chicken fanciers, I determined to have a breed entirely different and distinct from them. So I sold my ducks and invested my money in six Buff Orpington pullets and one male. Of the young I raised all that did not come strictly up to the mark, I sold to the huckster, and this money, together with the proceeds from eggs sold, bought my hats, shoes, dresses and the

other nick-nacks so dear to young girls, including money to buy Christmas gifts, etc.

I bought the pullets in 1912. In the spring of 1913 I sold one cockerel and ten pullets to a man in Indianapolis, for \$25.00. Wishing to improve the quality of my stock, I invested all this money except \$5.00 in eggs from one of the best Buff Orpington breeders in Indiana.

I paid \$10.00 for one setting and selected two other settings for \$5.00 each.

From the \$10 setting I hatched eight nice chicks, and raised them all. From the two \$5 settings I hatched from one, seven, from the other eight chicks and raised all of them.

Later in the season, May 8th, this generous breeder sent me another setting gratis, to make up for the infertile eggs in the other settings. May 30th, I hatched (or my trusty old Orpington hen did) ten lively chicks.

That makes me 23 early March and April chicks, and ten May chicks, which I have on hand, beside eight

hens from the previous year, which I am keeping for sitters and mothers. There are ten cockerels worth from \$1.50 to \$5.00 a piece and 23 pullets at from \$2.00 to \$3.00 a piece.

My prices are very conservative, compared with the breeders' prices from whom I bought, but one must creep before one can walk, and after I have made a show record my prices may rise, but you can see that I have a very nice beginning and have made a good investment. My pullets are averaging a dozen eggs a day, though I am not pushing them, preferring that they conserve their strength and vigor until the breeding season commences, when I shall sell eggs at \$3.00 per setting, while they are but 30 cents in the market now.

If I dispose of my surplus cockerels at a fair price and have a good egg trade, I shall have as good a business as a clerk or stenographer, and far more freedom and independence.

I am keeping a record and you may hear from me later. Yours for good poultry.—Mabel G. Howe, Fortville, Ind.

Complete 5-Room ALA

Have YOU learned the facts about the great ALA

How the "Cut-to-Fit" ALADDIN Houses are Stronger, Warmer and Better Built

The Aladdin Read-Cut System of House Building is better than the old saw-measure-fit-on-the-ground system for the same reason that your modern binder is better than the old scythe. It does the work better, quicker and cheaper. Every piece of material in the house—siding, flooring, studding, joists, rafters, stairways, etc., is cut to fit in our mill by the finest machines. Accuracy of joints results and your house is stronger, warmer and tighter than if built by usual methods. Waste in material can not occur. Every inch of lumber you pay for is actually in and a part of your house. You know the lumber that's wasted costs just as much as the lumber that's used. The average house built the old way wastes 18 per cent of the lumber—\$18 out of every \$100 of your money is wasted—burned up for kindling wood.

ALADDIN Prices Undersell--ALADDIN Quality Excels--Go Where You Will

Why do Aladdin prices undersell and Aladdin Quality excel? Here's the straight from the shoulder reason—Because a train load from the Michigan forests enters the Aladdin Mills every day and from the bark to the heart every inch is worked on our own saws. Our one arm reaches into the forest and the other brings you the completed house. Your dollar carries no excess profit on its back and pulls a full load. You get every last ounce of value out of it. Five-acre of ground are covered with buildings and lumber at our great Bay City Mills.

ALADDIN Houses Are Not Portable--Not Sectional

Do not confuse Aladdin houses with the portable kind. They are not portable or sectional in any way. Every Aladdin house is ERECTED exactly like any well-built house—except the sawing and wasting of material, which occurs on the ground the old way. The completed house is built just like, looks like and is just like the finest frame dwelling designed by expensive architects, built by high-priced contractors and cut-to-fit on the ground by carpenters. The Aladdin system of construction is just the same as the great steel skyscraper system—where the big beams for a 20-story building are planned, sawed, cut to fit and marked in the steel mills and shipped to the city to be erected and completed without cutting on the ground. "There's no use arguing against success." Your neighbor's home proved the success of Aladdin houses. We will give you names of customers to go and talk with.

Are You a Buyer or Just a Spender

The shrewd buyer compares prices, measures values—insists on at least 100 cents' worth in every purchase—gets his money's worth every time. The shrewd buyer gets the highest quality goods for less money than the spender can secure cheap stuff. For instance, why should you be satisfied with any building material that does not measure up to ALADDIN Dollar-a-Knot Quality? Can you find any lumber dealer in America who will match our dollar-a-knot quality, price and satisfaction?

What the Dollar-a-Knot Guarantee Means to You

The great Dollar-a-Knot guarantee is the strongest evidence of our faith in our goods that we know how to express. It is perhaps the greatest quality-backing announcement ever made by any manufacturer. It means to you the cleanest, clearest and best emphatic proof that what you buy from this company can not be excelled—it's the best merchandise of its kind obtainable. Can you think of any reason why you should be satisfied with any lumber purchase that does not measure up to this standard?

HERE'S WHAT YOU GET WITH EACH ALADDIN HOUSE

Over 100 homes in this catalog from \$137 to \$2,000, two rooms to twelve rooms, floor plans and prices for each house—a five-room ALADDIN House \$298. Every piece of Aladdin lumber is the best that grows. Aladdin houses have better designs than you can get elsewhere, at the lowest prices—Aladdin lumber comes direct from the forest to you. Price of every Aladdin Read-Cut House includes Clear Siding, Clear Flooring, Clear Finish (having no knots) framing lumber, all cut-to-fit; windows, frames, casings, stairways, glass, hardware, locks, nails, paint and varnish for two coats inside and outside, Clear Shingles, plaster board or lath and plaster, complete instructions and illustrations for erection, eliminating the necessity of skilled labor—in short, a complete house.

SPARE TIME AND STRAWBERRIES

(Awarded Second Prize of \$2)

I think your paper is getting better and if my best crop story will help along, here it is: How I made the spare time I had one summer bring 120 worth of lovely strawberries the next.

I had almost one-fourth acre of sandy loam which had been a potato patch and was quite rich. I obtained good plants from three different people's patches and set plants one foot apart in the rows with three feet between each row.

Bought a light hoe for 35 cents. A neighbor boy made me a nice light wheelbarrow with the wheel of an old baby buggy, some barrel staves and light frame work. That was my outfit. As soon as it was warm in the spring I began my work, making a sufficient hole in the ground for roots and pressing dirt firmly around each and picking all blossoms off. For the rest of the summer a good share of my spare time was spent keeping the weeds down. I had it cultivated twice and I hoed it three times.

When I would go to hoe I would usually take a wheelbarrow of fine droppings from the hen roosts and sprinkle along the rows, and by fall I had the rows all dressed with it and pretty well hoed in. The next spring I had a lovely garden of white flowers and beautiful green foliage, and later the most profitable garden crop I ever raised. We picked sixty bushels of the nicest strawberries I ever saw at \$2.00 a bushel clear, after the crates were paid for.

The wheelbarrow came in good again to wheel the crates to the house, so that was \$120 dollars pleasantly earned. But I found that strawberry rows should be four feet apart.—Mrs. Emma McLean, Crosswell, Mich.

POOR SOIL YIELDS RICHES

(Awarded Third Prize of \$1)

Some twenty years ago we lived on what had been an old cattle ranch. A large concrete, two-story house, half buried in the east side of a hill, the ruins of an old concrete barn several feet deep in manure and an irrigating

ditch which afforded a fair supply of water comprised the improvements on the place, or, rather, what there was left of them.

Of the six hundred and forty acres only forty-five were under ditch, most of which was put into alfalfa and paid well. But some of the ground was a poor said soil that under ordinary culture would not pay for the planting. Two acres of this was a sand knoll, the poorest ground there was. This we plowed, smoothed and marked off by riding on a road cart over it both ways. At every other crossing of the wheel tracks both ways we dug holes like one would to set out small trees. Two loads of the old rotten manure were then hauled and a double shovel-ful put in each hole and well mixed with the dirt in the bottom. The holes were then filled and planted to Hubbard squash.

This two-acre patch with only ordinary care yielded us sixteen double wagon box loads of as fine squashes as I have ever seen. We stored them over winter in the front basement

rooms, which were dry and warm enough to prevent freezing, and in the spring wholesaled them at 1½ cents per pound, or for something like \$240 for the crop. Pretty good for a sand knoll, wasn't it?—John W. Crouch, Las Palomas, N. M.

"An hour or two's wait, with one or two children in a store where one feels in the way is not a pleasant experience. Every town to which farmers and their wives come to trade should have a rest room for the women."—Southern Farm Journal. A store is a most uncomfortable place to wait in, regardless of how welcome the proprietor tries to make one feel. The rest room is the right idea. There a farmer's wife would always find some acquaintance (and make new ones) and pass the waiting hour pleasantly and therefore profitably. Build rest rooms, and put telephones in them, too.

A Money-Raising Hint

"I think the poet very correctly wrote that man was made to mourn." "I do too, for a man would never mourn if he wasn't made to."

Waste

Next to the cost of material and labor, the most expensive item in the average house is waste. It doesn't show in the bills, but it's there just the same. It is an unnecessary item. You can't get it out when you build the old way. Waste sticks like a burr to every charge in the bill. It costs you \$18 on every \$100, and you get nothing for it.

Unnecessary waste in building operations in the United States costs builders \$1,000,000 a day! You will contribute your part to this enormous figure, should you build your house the old way.

NEW INVENTION

Wonderful Self-Heating Iron NOTHING ELSE LIKE IT.

MAKES AND CONTAINS ITS OWN HEAT

Convenient—Economical—Safe.
Saves Its Cost Every Month.

SEE HOW SIMPLE—DIFFERENT—EASY. Light—Iron—turn out when finished—that's all. NO HOT STOVE—SAVES MILES OF STEPS—actually makes ironing a pleasure.

The New STANDARD Self-Heating IRON AIR-GAS BURNER
Gives Correct Heat, Perfect Service, Economy, Comfort.

The "STANDARD" is stove, fuel, heat **ALL IN ONE**—don't stay in hot kitchen; iron any place, any room, on porch, or under shade-tree. Go right along, one thing after another, works while it's heating, heats while it's working; saves miles of walking.

CHEAPEST FUEL—EVEN HEAT

All kinds of clothes **Ironed Better in Half the Time.** No waiting, no stopping to change irons, right heat. Easily regulated, nothing wasted. Iron on table all the time, one hand on the iron, the other to turn and fold the clothes. The "STANDARD" is neat, durable and compact, all parts within radius of iron and handle. **No TANKS** or fittings, standing out at sides or ends, to hinder or be in the way. No wires or hose attached to bother. **No PUMP.** **RIGHT SIZE—RIGHT SHAPE—RIGHT WEIGHT,** cheapest fuel, **One Cent Does Ordinary Family Ironing.** Every Iron tested before shipping. Ready for use when received.

Sectional View.

WHAT USERS SAY—ALEX. STALKER, New York, writes—"The Standard is most useful and time and money saving device that was ever made. Finished a large ironing in two hours which usually took half a day with old style Sad Iron." **J. C. KING,** Illinois, writes—"Well pleased with your Standard." **L. N. NEWBY,** Illinois, writes—"I find your Iron all you claim for it." **G. E. WARD,** Indiana—"Your Iron is fine." **MRS. CAROLINE KOTZ—"Your Standard gives splendid satisfaction." MRS. MELVIN MAUBER—"I find your Iron as represented, well pleased." MRS. W. B. FOURMAN, New York—"Your Iron is a perfect success, and I am enthusiastic over what it does and economy in its use."**

NOT SOLD IN STORES
An ideal invention for every home. No carrying coal, kindling, ashes, soot, dirt; absolutely safe, durable—**LASTS FOR YEARS.** Air-gas fire, perfect combustion; for more heat or less heat, simply turn knob, then it is self regulating, requires no attention. Nothing to get out of order. **Price Low.** Sent to any address. **Send no money.** Write today for our 30-day offer, full description, catalogue free.

WHIRLWIND SUCCESS FOR AGENTS

We want men and women, home or traveling, all or part time, to exhibit, take orders, and appoint agents. Garden and Orchard

SUCCESS WITH EGG PLANT

Egg plant seeds are very hard to germinate or start, and my mother ever had any luck raising any plants, so last February I tried my hand at it. (I am 14 years old and like garden work.) Early in March I filled a large shallow box with dirt and set it on top of the heating stove until the dirt was thoroughly warmed, almost hot, then I planted the seed, watered it thoroughly, placed a wet sack over the top, set the box again where the stove heat almost baked the dirt for three days, keeping the sack wet all the time. The end of the third day the seeds were sprouting so I set the box under the stove for two days, when the egg plants were through the dirt. I found I had 125 plants. I kept them warm and wet until ready to set them out in hot weather. This plant will stand a drought better than any other vegetable. They are not as well known as they should be, as they deserve a place in every garden, for they are nourishing, some say as much so as beef. Any way they are good, and very easy to make a nice crop after they are once in the garden. I set out fifty plants, selling the rest for a good price. We had an awful drought, but I must have raised several bushels of the pretty fruit. I did not sell any as we are so fond of them ourselves and had them long after the first frost. They will keep a long while stored in a cool cellar. Just lay them on a shelf so they do not touch each other. I hope my experience will help others to grow this delicious vegetable. My mother will send the household department some good receipts for cooking egg-plant, as there are many ways of preparing it.—**Alfred Alphonso, Union, Mo.**

INSECTICIDES FOR SUCKING INSECTS

(Insects like plant lice, scale, squash bugs, etc.)

Kerosene Emulsion

Kerosene (coal oil), 2 gallons; soap, ½ pound; water (soft), 1 gallon. Dissolve the soap in water by boiling; remove from the fire, add kerosene, mix vigorously until all forms a creamy mass or emulsion. Dilute according to the per cent wanted. For 10 per cent oil emulsion add 17 gallons of water; for 15 per cent oil emulsion add 10 ½ gallons of water; for 20 per cent oil emulsion add 7 gallons of water; for 25 per cent oil emulsion add 5 gallons of water; for 30 per cent oil emulsion add 4 gallons of water; for 40 per cent oil emulsion add 2 gallons of water; for 50 per cent oil emulsion add 1 gallon of water.

In the making of an emulsion it is essential that the oil when added to the water be thoroughly agitated in order that a thorough mixing of the ingredients be obtained. This may be accomplished by turning the nozzle of the force pump into the mixture and forcing the solution through. The heat, however, is injurious to the valves of the pump. A jet of steam, if handy, could be used with good results.

The Home-Boiled Lime-Sulphur

Twenty-one pounds stone lime (burnt), 18 pounds flour (not flowers) of sulphur, 50 gallons of water. Put 5 or 6 gallons into kettle or tank; add the sulphur, which should first be passed through a flour sieve; then add the lime, a small quantity at a time. Now start the fire under the kettle or tank. When all lime has been added, and the slaking is complete, add water enough as needed to keep to a good boiling consistency and keep boiling vigorously from 40 to 60 minutes. The solution is then ready to be thinned, strained carefully into spray tank or barrel and sufficient water added to make 50 gallons.

Why Tires Blow Out And How Goodyears Combat It

Most blow-outs in tires which are not worn out are due to wrinkled fabric.

All tires, save No-Rim-Cut tires, are cured on iron cores alone. The compression wrinkles the fabric, and those weak points give out under strain.

No-Rim-Cut tires are final-cured on air bags, shaped like inner tubes—under actual road conditions. The elastic air stretches the fabric. This extra process costs us \$450,000 yearly, but it saves tire users millions.

We combat loose treads in No-Rim-Cut tires by a patent method used by us alone. It lessens this danger by 60 per cent.

We make rim-cutting impossible by a way we control—the only satisfactory method known.

And we give you, if wanted, All-Weather treads—tough, double-thick and enduring. The only anti-skids with the smoothness of plain treads.

We Alone

Note that we alone employ these features. The only way to get these savings is in No-Rim-Cut tires.

The result is, Goodyear tires outsell any other. Motorists bought last year eleven times as many as they bought in 1909.

No-Rim-Cut tires will win

you if you give them a chance. Learn what these features mean to you. We have reduced tire prices in the past 12 months by 28 per cent.

This PONY GIVEN

Who Wants Me? QUICK!

Boys! Girls! Do you want this beautiful Shetland Pony for your own? Write today—Quick! You can get him Free—but Hurry!

Carriage and Harness, Too, Come With Me

All GIVEN!

My name is "PADDY"

I am 42 inches high and three years old. I am a pet, too. My color is black, and I have the silkiest, fluffiest mane and tail in the world. I am considered a very handsome pony. I am well trained. You can either drive or ride me and I am just as gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy.

I WILL GO ANYWHERE to find a kind little boy or girl as my owner. I am ready and waiting, I'll make you happy because that is what I was made for and it's what I like to do. If you want me, and I know you do, just send your name and address to Uncle Billy and I'll do my best to come to you in a hurry. I am going to some boy or girl, so be quick. Send your name this very day.

Send Me Your Name Today

I have already given away 32 real, live Shetland ponies. Do you want "Paddy"? Of course you do. Write me at once and I will send you 2,000 Pony Votes Free for your promptness. I will also show you how to get more pony votes. So easy to get a pony if you do as I say. I will also send pony pictures; tell you how to get "Paddy" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—**at once—don't put it off.** Just say that you want "Paddy."

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

The Chicago Tribune of March 21st contained this:

When dairymen who have been selling milk to the Borden Company in West Chicago unloaded their products at the Borden plant yesterday morning they were confronted with the following notice:

"The contract books are closed for the purchase of milk at this plant for the contract period."

Every dairyman who read the announcement felt a twinge at his purse. It meant a curtailment of his income—in some instances a complete cutting off of the revenues by which he maintains his home. In every instance it meant that the farmer or dairyman reading the notice will be compelled either to seek a distant market, which means expensive transportation, or sell his cows.

The Borden Company and the farmers and dairymen in the vicinity of West Chicago have had a disagreement. As the result the Borden plant, valued at \$60,000, will be closed, twenty-five men will be thrown out of employment and the dairymen and farmers will be deprived of an annual revenue amounting to upwards of \$150,000.

The contract period is six months and expires April 1. The bottling plant will close its doors on that date.

The disagreement arose over the price of milk.

The officials of the company state that when the dairymen refused to sign contracts for the ensuing year the company immediately closed contracts elsewhere to cover the 18,000 pounds of milk daily furnished at the West Chicago plant.

The writer, in an address at Huntley, Ill., last summer, and later at the annual meeting of the Chicago Milk Producers' Association, warned the producers of that district that this thing would be likely to happen as long as any important producing sections were not organized or as long as all sections producing milk commercially were not federated for uniformity of prices and marketing.

Particular attention is called to the statement by the Borden Company as follows: "When the dairymen refused to sign contracts for the ensuing year we immediately closed contracts elsewhere to cover the 18,000 pounds of milk daily." The reason the dairymen would not sign the contract was because the price offered by the Borden Company was considered too low.

But there are other dairy districts that are not organized, also some districts that are organized that would accept lower prices. In one or more such districts the company made contracts at prices enough lower to justify them in letting their \$60,000 plant

stand idle. So, as we have said before, the limit of price that any organized dairy district can make and maintain for milk is the price that other districts, organized or unorganized, are willing to accept for milk, or that they can be persuaded to accept. And what is true of milk is true of every farm crop.

And there is another evil that will flow from this matter. The Borden Company bottled the milk at West Chicago, but it marketed it in various parts of the country. Now that the dairymen in that district no longer have their own market, it will throw the daily product of 18,000 pounds of milk on the local Chicago market. This will unbalance conditions there and it will probably mean a lower price for the dairymen who were regularly supplying the demand of consumption in Chicago. When we take into consideration the fact that there is both a local demand and a foreign demand to be supplied by the producers of the milk in the Chicago district—and it is the same way in every other large producing district—it becomes very clear that the problem of marketing milk is not a local one, but a national one, as it is with every other farm crop. An organization standing alone in a district supplying Chicago with milk will do some good, but the benefits must be limited by other producing districts that are operating independently. Therefore what is needed is a comprehensive organization, so that when the West Chicago people set an equitable price on their milk that will be the price that other districts have set on their milk, and all of them will back up the others in their demand. Under such conditions the Borden Company would have found the same price wherever they went, under such conditions contracts would have continued to be made with the West Chicago producers and the losses and distress that will now follow in the train of this event would not have been necessary.

Some unthinking people may say that it is unlawful to agree on a price for a large section of the country, or the whole country, for a commodity like milk. If it would be unlawful for farmers to guard against just such a condition as exists now around West Chicago, then why is it not unlawful for a company of people who have en-

couraged and developed an industry at that place, to suddenly kill that business by closing the factory and refusing to take the farmers' products. For a truth there will be no restraint of trade when farmers take their business into their own hands by the system that this paper teaches. But under the plan still in vogue in most places there is restraint of trade. For instance, the article says that the closing of this factory will throw twenty-five men out of employment and the farmers will be compelled to either seek another market at increased expense or sell their cows. Here is restraint of trade in the matter of producing milk and a market that has existed for years is suddenly destroyed. What we seek is to make such things impossible, or at least unnecessary.

In conversation with manufacturers of milk products they have stated they would have no objection to paying dairymen their prices, provided their competitors who sell in the same markets with them could not buy for less. In other words, if the Borden plant at Chicago, Ill., would pay higher prices for raw material than a competing company in the St. Louis district or any other district, then when both of the manufacturers disposed of their products on a certain market at the same prices, the former would be at a disadvantage with the latter just to the extent that it paid more for raw material, and this difference might be enough to occasion a loss to it in business. So the very existence of a manufacturing company depends on its getting raw material at as low a price as any of its competitors pay.

A few years ago the writer talked with the officers of the American Tobacco Company about prices and marketing tobacco. They were very free to say that they did not object to the tobacco growers organizing to control the price of tobacco, providing they would make their organization effect-

ive and have just one price for all buyers for the same grade of tobacco. But what they did object to, and what they would resist, was the attempt of the organized tobacco growers to dictate prices to their company, while some of their competitors were buying at lower prices.

And this is a sensible view to take. Farmers have no defense when it comes to this condition. They must either make their organization effective to make and maintain prices for raw material to all alike, or expect the opposition of the buyers, who must meet nation-wide competition in marketing the finished products. The way to make the Chicago district dairymen's organization effective when it comes to setting the price for the buyers in that district is to get all of the other large producers east of the Mississippi river and north of the Ohio river organized like they are, and then federate all of them with a central head.

Such an organization will be welcomed by the buyers as warmly as it will be appreciated by the producers themselves. It is what this paper is advocating for all of the crops, and it must be accomplished before there will be the certainty and definiteness that producers, necessary handlers and consumers all hope to see. It will do little good for some communities to increase their production or to improve the quality of their products or to standardize them or to understand the market requirements, if there are other communities that throw unwieldy surpluses of products on the markets unexpectedly and thus destroy the profits.

Dairymen need a nation-wide campaign to organize and federate. The time is right before us. We believe less than a dozen determined dairymen in the Chicago district, with the examples of the past as the spur, could make such a movement spread over

the country like wildfire. And what is true of the dairy industry is true for all other farm crops.

For the first time in the history of American agriculture the tide of organization is turning in the right direction. The methods as taught by this paper and the Equity System of Marketing were so new and different that they were misunderstood by many who did not take the time to look into them carefully. But the whole country is now rapidly recognizing that they are correct. Also the actual working of the plans has proven them so effective that the last doubt of opposition is crumbling and must fall. Around the Equity idea and plan we may expect to see gradually built a sound and permanent farmers' organization at last. We are, therefore, bending every effort to enlist every man possible to forward the movement. A leader in each community is what is needed. A little more education of the masses and a little clearer understanding of the plan of organization and the system of marketing, with examples of actual business done, showing the many benefits realized by followers of the Farmers Society of Equity, is all that is needed.

Thus, recognizing the imperative necessity of extending the movement for one organization for the whole country, for all the farmers and for all the crops, we urge all thoughtful people to realize that, regardless of what differences there may be in the various farmers' organizations that exist today, and which have served to keep them divided, that now all can unite on the one vital thing of price making and marketing in a supreme endeavor to complete their organization and establish a national business system for agriculture, all under the direction of one central head. So we appeal to all organizers of the Farmers Society of Equity and organizers of other farmers' societies to the end that a great national federation may be effected this year, to be effective in marketing the crops of 1914. And in communities where there is no organizer we again call for some person to send the appended blank and take the lead.

THE BLANK

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

This list was sent by

COMMUNICATION TO LOCAL CLEARING HOUSES

All local clearing houses of the F. S. E. will receive, about April 1, a statement of members' annual dues payable at that time. Also it will show those delinquent. The statement will be sent to the secretary, who is charged with the collection and remittance of dues to the county, state and national organizations. Members who know that their dues-paying date comes

All a Car Can Give

Reo the Fifth

Offers to you all that a car can give. And at a lower price than so much value ever cost before.

The chassis is the final achievement of R. E. Olds, after 25 years of car building. It marks the best he knows. No other car in this class embodies so many costly features. None is built with so much care and skill and caution as this car.

The body is the coming streamline body, now European vogue. These flowing lines are considered finality in beauty of design.

The finish and upholstery cannot be excelled. And the equipment includes all that motorists desire.

In all respects, this season's model marks the best that men can hope for in this class of car.

Now \$220 Less

And the price this year gives you record value. It is \$220 less than last year's model, similarly equipped. This is because we have for three years centered on this chassis. All the costly machinery needed for it has been charged against previous output. From this time on this entire item is deducted from our cost.

The Car to Keep

Other cars may look as well, may run as well when new. But a man who buys a car to keep wants it built like this.

Here is steel made to formula. Here all driving parts are given 50 per cent over-capacity. Here are 15 roller bearings—190 drop forgings.

Here is a car built slowly and carefully. Parts are ground over and over. Every part must pass radical tests—most of them tests which are not required in any other car in this class.

The result is freedom from trouble, low cost of upkeep, and a car made to run for years and years as well as it runs when new.

We could save at least \$200 by building a shorter-lived car. But Reo the Fifth will save you two or three times that if you keep it until it wears out.

Here also is the only car with one-rod control. Never were gears so easily shifted. And no levers are here in the driver's way.

A thousand dealers sell Reo the Fifth. Ask for our catalog and we'll direct you to the nearest showroom.

REO MOTOR CAR CO., Lansing, Mich.

Reo the Fifth

"1914 Model"

Now \$1,175 Equipped

New-Style Body
Electric Lights
Electric Starter
Electric Horn

One-Rod Control
35 Horsepower
Tires 34 x 4
Also Roadster

April 1, and those who know they are delinquent previous to April 1, should prepare to make prompt payment. The annual dues are \$1.50. The apportionment is as follows:

To the national clearing house, 50 cents; to the state union, if one, 25 cents; to the county clearing house, if one, 10 cents; retained in the local clearing house treasury, 40 cents; for the official paper, 25 cents.

All local clearing houses will receive a request about April 1 to supply national headquarters with a report of the kind of crops that its members will grow this year for marketing. This is needed so freight rates can be obtained in advance to the different markets and

so our market representatives can be advised of the crops that will seek an outlet through them. Every member is interested in the marketing of his crops, therefore he should not fail to attend the April meetings and see that his report is recorded, so that it may be included in the report to national headquarters.

There will also be other important communications about the business of selling crops and also about buying some supplies.

It is expected that the new directory of market representatives will be printed and ready to mail to local, county and district clearing houses with the communications referred to above.

Awl Given

Needed on Every Farm

Save money daily with an awl by pairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6 1/2 in. long. Makes lock stitch. Use any thread. Full instructions included. OUR OFFER—Awl given with a two years' subscription for *Up-to-Date Farming*. Satisfaction guaranteed or money refunded. UP-TO-DATE FARMING, Indianapolis.

Alfalfa Clover

A field of alfalfa will improve your soil, increase your supply of hay and increase the value of your land. It is easy to grow anywhere if you know how to prepare your land and when to sow. We will give you full directions FREE with each order of seed purchased of us.

Our prices the lowest for best seed. Write for prices. O. K. Seed Store, Indianapolis, Ind.

Phelps Great Buggy Book Is Now Ready to Mail

—Get Your Free Copy Now!

HERE is a book that will make you a master of buggy knowledge. It will be sent postpaid, free. Read pages 7 to 11 and pages 24 to 32 for inside buggy making knowledge. Then no matter where you buy, you will know in detail just how a fine buggy should be made. Remember, Phelps has built up an enormous business and has nearly 200,000 buggies running on American roads because he has stuck to fine second growth hickory in construction (split, not sawed) and made a big money saving proposition to the people.

Save \$25 to \$40 and Get 30 Days' Free Trial and Two Years' Guarantee

Get your buggy out on your own roads and try it now. Satisfy yourself. If you want a special job, Phelps will build that for you and still give you the trial and the guarantee. Phelps stays right in the factory himself. He sees the jobs done right and sent out right.

Get the Book Now. It is ready to mail and you might as well have your copy and be studying it, even if you don't buy. Address him personally, H. C. Phelps, President.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

GENERAL TRADE is summarized by Bradstreet's as follows:
Irregular. Distributive trade better. A week of spring weather helps business. Larger eastern centers and industries quiet. Hand to mouth buying. Investigation and regulation cloud outlook and depress enterprise. Easter season late. Excellent early crop condition. Winter wheat area and condition unsurpassed. Spring influences depress dairy products. Cereals higher. Old supplies moderate. Ebb and flow in export trade. High wool prices. Uncertain cotton situation. Coal trade dispute impending.

A period of about a week of real spring weather, followed by a week of cold, freezing, snows and storms over a large part of the country, with unsettled weather continuing, ushers in a late spring. Outside of some damage from the last freezing weather to winter wheat and grass, on low ground covered with water, which in the total will not represent much loss, the winter wheat and grass prospects still remain almost unprecipitated good. Also the continued changeable and unsettled weather has not been detrimental to crop prospects except should it continue longer there will be delays in preparing the ground and planting. However, the weather in the early part of the winter was such as to permit much plowing and preparation for the spring crops. A good growth of winter wheat and grass, and thorough wetness of the soil, go far toward insuring good yields of these crops. As regards wheat, the condition is very similar to what it was a year ago and 1913 brought the biggest crop of wheat the country ever raised. Normal weather is now the other important thing for casting the spring crop.

The wheat visible decreased more than a million bushels. A year before in the same period the decrease was about twice as much. It is over six million bushels lower now than a year before, but is still nearly three million bushels greater than two years before. The price is a little higher than two weeks before, but is 7 to 12 cents under the price a year ago. Attention is called to the future grain price of July, quoted at 89 cents. Also that July wheat at Winnipeg, Canada, is quoted at 94 1/2 cents, nearly 6 cents higher than the United States price. A report by the International Institute of Agriculture says that the production of

from country points indicate that there is a good, liberal supply still in the hands of growers, which would seem to suggest that much advance in price is not probable and that gradual marketing will be necessary to maintain present values. A number of our members report difficulty or inability to get cars for shipping potatoes. When the local agent does not give the farmers the same service that he gives to the merchant the matter should be reported to the Railroad Commission of the state, addressing the letter to the state capitol.

Eggs have declined heavily, as might be expected at this season. There is much uncertainty as to the spring price. Egg handlers and storers have been having meetings and are uncertain as to what will be safe to pay. They are afraid of the imports of eggs next fall and winter, when storage eggs must come out. The probability is that the price of eggs will be lower this spring than for a number of years. Much publicity is again being given to marketing farm products by parcel post. Our belief is that this plan of marketing, under the most favorable conditions that can be produced by the postoffice department, will never prove of much benefit to agriculture as a whole or to the consumers of their products. Some few things can be marketed at a slight saving, but with considerable more trouble. The fact that the supplies from the farm will be heavy at times and light or nothing at other times will discourage the consumer. Also if the consumers get part of their supplies direct from the producers, thus taking trade away from the established retailers, those established retailers will put the prices higher on what they do sell and the saving from the direct trade will be fully or more than lost in the higher prices paid for other things at the store.

Advice

WHEAT—In view of all conditions which exist at the present time, we can not hold out any encouragement for higher prices. **CORN**—Market gradually and with-hold marketing when the price goes below 65c at Chicago. **OATS**—Unfavorable weather for planting or the growth of the crop is about the only factor that may make prices higher. **COTTON**—Market gradually. **POTATOES**—Market gradually.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on March 14, 1914, with comparisons, are shown in the following table:
 (The sign — before figures means decrease; X means increase.)

	March 14, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	62,086,000	-1,108,000
CORN	23,242,000	X 7,560,000
OATS	24,882,000	-1,117,000
BARLEY	6,335,000	-932,000

The visible supply of wheat in Canada on the same date was 4,731,000 bushels. This is 2,721,000 bushels less than two weeks before and 164,000 bushels more than a year before. The visible supply of oats was 14,503,000 bushels on the same date, which is 1,099,000 bushels less than two weeks before and is 4,851,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on March 23, 1914, two weeks before and a year before as follows:

	March 23, 1914	Two weeks before	A year before
Chicago	95 @ 95 1/2	94 1/2 @ 95	1.02 @ 1.07
St. Louis	94 @ 95 1/2	94 @ 95	1.01 1/2 @ 1.09
Kansas City	90 1/2 @ 91	90 @ 90 1/2	1.01 @ 1.07
Cincinnati	98 1/2 @ 99 1/2	98 1/2 @ 99 1/2	1.08 @ 1.11
New York	1.05 1/2	1.04
Minneapolis—Spring wheat:

Chicago	42	40 1/4 @ 41	34 1/2 @ 35 1/2
St. Louis	41 1/2	39 @ 39 1/2	35 @ 35 1/2
Kansas City	41 @ 42	40 @ 40 1/2	34 1/2 @ 35 1/2
Cincinnati	41 1/2 @ 42	36 1/2 @ 37
New York	46 @ 46 1/2

Future Grain Prices

Chicago grain futures on March 23, 1914, and two weeks before as follows:

	Chicago	Two weeks before
Wheat—May, 93 1/2c; July, 89c.		Two weeks before, 92 1/2c and 87 1/2c respectively.
Corn—May, 67 1/2c; July, 69 1/2c.		Two weeks before, 66 1/2c and 66c respectively.
Oats—May, 40 1/2c; July, 40 1/2c.		Two weeks before, 40c and 39 1/2c respectively.
Winnipeg, Canada—Future wheat prices closed March 23 as follows: May, 93c; July, 94 1/2c; October, 80c.		Two weeks before, 92 1/2c, 94c and 88 1/2c respectively.

Cotton

New York, March 23, 1914.—Cash cotton closed as follows: Middling upland, 13.50c; middling gulf, 13.75c. Two weeks before, 13c and 13.25c respectively. A year before the price was 12.60c and 12.85c respectively.

MOVEMENT OF COTTON—BALES

	Ending Mar. 20, '14	Ending Mar. 13, '14	Ending Mar. 21, '13
For the week	151,667	172,558	127,397
For the season	12,951,322	12,769,238	12,231,533

VISIBLE SUPPLY—BALES
 World's 5,730,371 5,796,450 5,128,920
 American 4,056,371 4,115,450 3,809,920
 The American visible decreased 167,517 bales and the world's visible decreased 162,517 bales in two weeks.

Chicago Produce Market

March 21, 1914

Chicago quotations are used in these reports for the sake of uniform comparison issue after issue and this year with former years. For advice about other markets and instructions for marketing, address Marketing Department, Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	90	60	87
Tuesday	50	38	34
Wednesday	23	45	62
Thursday	43	44	42
Friday	35	42	65
Saturday	42	50	52

Totals, 6 days... 283 279 342

Prices were without change. Trade continued quiet and not much trade was reported closed. The majority of buyers appeared to be holding off until Monday and some of the receivers did not show their goods, preferring to wait till the opening of next week. Receipts were reported at 42 cars, bringing the total for the week to 283 cars, or 4 cars more than last week and 59 cars short of a year ago.

Sales reported were: Per bushel, bulk, Wisconsin long, round and white mixed—1 car at 62c; round white, 2 cars at 62c; Rurals, 1 car at 66c. Sacked, white—1 car small stock at 60c.

Per bushel, bulk or sacked, Wisconsin, Triumphs.

Burbanks and Kings, poor to good	55 @ 60c
Round white	58 @ 63c
Dusty Rurals	58 @ 63c
Michigan, round white	58 @ 63c
Idaho, Pearls	80c
Oregon Pearls, ungraded field run	70 @ 75c
Fancy graded, bright	80 @ 85c

NEW POTATOES—Having fair sale at steady prices. Supply ample.

Barrels, Bermuda, reds, No. 1	7.00
No. 2	6.00
Hampers, Florida, red, depending on size	2.25 @ 2.50

The price of old potatoes is unchanged from two weeks before. New potatoes are also without change in price from two weeks before. The price of old potatoes is 15c per bushel higher than a year before.

SWEET POTATOES—Are moving slowly. The demand is only moderate. Some of the stock remains until it shows deterioration and then has to be repacked. Quotable as follows:

Barrels, Illinois, fresh, well packed, sound and uniform	2.50
If uneven, showing some under size	1.50 @ 1.00
No. 2	1.00
Hampers, Jersey	90 @ 1.00
Delaware	70 @ 80
Illinois, choice	75
Few extra good packing a trifle over	
Culls down to	35 @ 40

BEANS—A few consignments have been coming on the market. It has been considered that to sell Red Kidneys a trifle below late quotations had to be accepted. They were weaker. This is the only change which has been reported lately. All kinds were salable. Demand in no case was called any better than moderate.

Pea Beans—Hand picked, choice

Common	1.75 @ 1.85
Red Kidneys, choice	2.80
Brown Swedish, long	2.00
Round	2.35
Red Kidneys are 10c to 15c a bushel lower than two weeks before. Other kinds are unchanged. A year	

before hand-picked choice pea beans were quoted at \$1.90 to \$2.00.

HAY—Receipts, 1,377 tons.
 Choice Timothy Hay..... \$17.00 @ 17.50
 No. 1 Timothy..... 15.00 @ 15.50
 No. 2 Timothy..... 12.00 @ 13.00
 Iowa and Nebraska Prairie..... 10.00 @ 15.50
 Illinois and Wisconsin Prairie..... 6.00 @ 7.00
 The price of timothy hay is from unchanged to 50c a ton higher than two weeks before. Iowa and Nebraska Prairie hay is unchanged to \$1 a ton higher than two weeks before.

STRAW—Rye straw quotable at \$7.50 @ 8. Oat straw at \$6.50 @ 7.50. Wheat straw \$6.50 @ 7.
 Oat straw is unchanged to 50c a ton higher than two weeks before. Other varieties unchanged.

BROOM CORN—Not much doing, and demand confined to good quality.
 Per ton, Illinois corn..... \$120 @ 160
 Oklahoma..... 100 @ 150
 Damp and damaged less.
 There is no change in the price of broom corn from two weeks before—in fact, for a long time.

EGGS—The receipts at Chicago for the periods mentioned were as follows:
 April 1, 1913, to March 21, 1914, 3,430,892 cases.
 April 1, 1912, to March 22, 1913, 3,314,031 cases.
 April 1, 1911, to March 23, 1912, 2,707,541 cases.
 April 1, 1910, to March 25, 1911, 3,326,048 cases.
 There is an easy feeling at the current quotations. Trade was again fair, but not as active as of late, and buyers did not take up the offerings so readily. The receipts were unusually heavy and it being Saturday, too, may be one reason for the less urgent call.
 Fresh, Firsts..... 18 1/4 @ 18 3/4c
 Ordinary, Firsts..... 18 1/4 @ 18 3/4c
 Seconds..... 17 @ 17 1/2c
 Dirties..... 18c
 Miscellaneous, cases included..... 18 @ 19 1/4c
 Cases returned..... 17 1/2 @ 18 1/2c
 Storage packed, Firsts, deliverable March 30 and later, sold at 19 1/2 @ 20c.
 The price of fresh Firsts is 6 cents a dozen lower than two weeks before and 2 cents a dozen higher than a year before for the same quality.

Fruit

APPLES—More or less stock of Baldwins, Ben Davis and some other varieties show some deterioration in quality and color, due to holding. This stock rules easy and slow. It can be sold, but the price of choice stock has to be shaded. Apples that have held up fine are, at the same time, reported as steadily held and continue to meet with a fair demand. At current prices buyers become more careful as the season advances. That is only natural. The box trade is a little quiet.

Some prices follow (quotations by the barrel): Jonathan, \$6 @ 7; Wagners, \$5.50 @ 5.75; Northern Spys,

\$5.50 @ 7; Winesaps, \$5.50 @ 7; Ben Davis, \$4 @ 4.75; Baldwins, \$5 @ 5.75; Greenings, \$4 @ 6; Kings, \$5.50 @ 5.75; Tolman Sweets, \$4.75 @ 5.

Some prices of box apples from the west follow: Arkansas Black, \$2.25 @ 2.50; Rome Beauty, \$2 @ 2.25; Delicious, \$2.50 @ 2.75; Stitzenburg, \$2.25 @ 2.50; Missouri Pippins, \$1.74 @ 2; Ben Davis, \$1.75 @ 2.

Vegetables

ASPARAGUS—There is a good supply of California. Demand is fair, but scarcely equal to the arrivals. Market it weak.

BEETS—Good sale and firm when fancy, clean, uniform in size and with nice, fresh tops.

CAULIFLOWER—Supply is moderate and market firm for fancy, well-headed stock. Goods that are not fancy have to be liberally discounted.

CUCUMBERS—Fancy long green have good sale at firm prices, but No. 2 stock is dull. General trade quiet today, as usual on Saturday.

CELERY—Good sale and firm. Supply is not large and there is a good demand. A good deal of the California is yellow and has to be shaded to sell.

CABBAGE—Supply is small. Fancy stock has good sale and is firmly held.

CARROTS—Supply is liberal and demand quiet. Market has an easy undertone and stale stock is dull and weak.

EGG PLANT—Supply is moderate and demand slow. Market easy.

GREEN ONIONS—Most of the receipts are not really desirable. They do not clear and after being carried from day to day have no regular value. Goods must be fresh, nice in size and properly bunched to sell.

GREEN PEAS—Several small lots were received. It being Saturday, receivers could not look for so good a sale as if they had been on the market yesterday. Offerings were mainly of Florida June peas.

KALE—Virginia kale quoted at \$1 per barrel. Quality not very good. It is slow sale.

LETTUCE—Market is firm for fancy, clean, well-headed lettuce. Supply of this is small. Some of the Louisiana hamper lettuce comes loosely packed. Some of it was repacked and it took three hampers to make two. Loosely put up stock always sells at a big disadvantage, as shippers will not bid on that kind.

ENDIVE, Romaine and Escarola of nice quality have become scarce. There is a fair demand for nice goods.

ONIONS—Trade is quiet. Holders want to reduce their stocks before the advent of hot weather. Demand is only fair and market is rather weak.

PARSNIPS—Moderate sale. Supply is not large and market is steady.

PEPPERS—Selling freely and firm when fancy, nice size, good color and fresh.

PIE PLANT—Market is liberally supplied. Most of the trade now centers in California, which is in good supply.

RADISHES—Tips are in limited supply and steady when fancy. Of long radishes there are good offerings. Most of them are of ordinary quality and slow sale.

SPINACH—Salable and steady when fancy. Some of the Texas is too small to be desirable. It does not sell, even at reduced prices. Supply is light and trade very quiet.

STRING BEANS—A few more came in. They remained firmly held when nice. They sold fairly, as well as could be expected for Saturday. Prices were irregular, for the beans were not all of the same quality.

TOMATOES—Receipts are moderate, and fancy, sound, ripe tomatoes are in limited supply. Demand is good for that kind and the market is firm.

TURNIPS—In moderate supply and salable at steady prices when fresh, round, white and properly put up.

THE FARMER IS ABOUT TO SELECT HIS SEED CORN AND FINDS VERY LITTLE OF THE "COMPETITION" VARIETY.

wheat in Argentina, Australia and New Zealand, the chief producing countries of the southern hemisphere, will be 12 per cent less than the previous year's yield. Argentina's wheat harvest is in December and January, New Zealand and Australia in January.

Corn is the only cereal that we give the visible supply of that shows an increase in the last two weeks. And corn has led all other grains in increase in price, being 5 cents higher. Notwithstanding that occasionally a cargo of corn reaches this country from Argentina, our prediction seems to be verified that the surplus of corn from Argentina can not or should not cut very much figure in the price of corn for this country. Whatever influence it exerts is more speculative and sentimental than real. Farmers should not be frightened about Argentina corn, but when the price is put down by the speculators because of shipments being received, let them hold their corn back and the price will go up. The southwestern sections are buying large quantities of corn. The Argentina corn harvest is now on and we may expect increased imports to this country, but if all of the surplus would be sent here it could be absorbed without necessarily reducing the price if our American growers would hold their corn firmly. Oats decreased a liberal amount against about an equal decrease a year before and an increase of over eight million bushels in the same period a year before. The price advanced 1 cent to 2 cents a bushel.

Our report shows potatoes unchanged in price from two weeks before. Our advice

A LOCAL CLEARING HOUSE WANTED

in every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 16. Fill it out and send today.

Let Me Tell You

How the TEMPLE ENGINE

Revolutionized Engine Building

—by radical improvements that make its service as superior to that of the "common herd" engine as the thoroughbred is superior to the scrub, without increasing the cost to you.

I cannot undertake to describe this engine—HERE, but drop me a postal and I will tell you how it does away—almost altogether—with ruinous VIBRATION and FRICTION—without excessive WEIGHT and BULK—with many other features that render ordinary engines so costly, so short-lived, so inefficient and so cumbersome. In the meantime—note in sectional view of the "TEMPLE" above, three of its radically "different" features, and what those mean to ENGINE USERS:

INVERTED CYLINDER—with HEAD on BASE—close to the ground—eliminating vibration, causing engine to run quietly and smoothly, delivering maximum power with minimum consumption of fuel (gasoline, kerosene, alcohol or distillate).

BELL-SHAPED WATER JACKET—(see letter A) flaring toward the base, giving three times the usual volume of coolest water where it's needed—around the explosion chamber, the hottest part of the cylinder.

SMALL, LIGHT, PASC—cutting out two-thirds of floor-space and BULK and one-half the WEIGHT of other engines—making it much lighter and easier to move from one job to another.

PROFITABLE ALL-AROUND SERVICE—The extraordinary lightness, compactness and quiet running of this slow speed, heavy duty engine, make it IDEAL for running Thrashers, Grist Mills, Sawing Outfits, Shredders, Huskers, Sprayers, Pumps, and all other INDOOR and OUTDOOR machinery, requiring 2 H. P. to 50 H. P.

Just a penny—spent for the postal you send me—brings you ENGINE INFORMATION that will be worth hundreds of dollars to you in your season's work. Now "take a chance" and ask a CENT for the postal—and LEARN SOMETHING YOU DIDN'T KNOW BEFORE.

Equity Field Work

National Organizer Satterfield Meets Success in Utah

Farmers in Box Elder county, Utah, have been organized for seven years in an incorporated association known as the Farmers Cash Union of Bear River Valley. There are 280 stockholders, and the union has met with signal success. Its influence has been felt not only in the Bear River Valley, but across the borders of Utah. It is recognized as one of the strong financial institutions of the state. At the last annual meeting of its stockholders, the report of the auditing committee showed a surplus of \$12,000 and a 12 per cent dividend was declared. Those who have doubts or fears as to the ability of farmers to organize and conduct a business successfully are put to shame by this shining example.

Organizer Satterfield went to Utah to attend the annual meeting of the Farmers Cash Union, upon invitation of its officers, who desired the stockholders should know about the plans for wider, more effective co-operation of farmers. Previous to this he had presented the plans of the Farmers Society of Equity to the Board of Directors, who gave them their unqualified endorsement. Mr. Satterfield made one of his characteristically forceful, earnest, lucid addresses, and as a result, upon motion of Allen E. Roche, the whole organization of 280 members joined in a body. David Holmgren, the capable, efficient manager of the Farmers Cash Union, is one of the National Board of Directors of the Farmers Society of Equity.

There is a deep significance in this and other transactions of like kind, for this is but one of many instances of highly successful local associations uniting with this national organization. They prove beyond cavil that the plans of the Farmers Society of Equity supply a need at once recognized by farmers who have made a success of local co-operation; that the plans are practical, and based upon sound business principles. What more or better could be had than that the farmers have in the Farmers Society of Equity as near an ideal, workable plan as human intelligence can devise for making farming more profitable.

The Gulf Coast Organizes a District Union

Twenty-six delegates, representing sixteen local Equity clearing houses of the Gulf Coast, met in Mobile, Ala., February 25 and 26 and brought into existence the Gulf Coast District Union Clearing House of the Farmers Society of Equity. The District Clearing House will be incorporated, shares being placed at a value of \$50 each, nearly 500 shares being subscribed for at the time of organization. C. B. Lozier, who has been the chief adviser, organizer and business manager, states that the capital stock will all be subscribed in a short time. The corporation will be put on a strictly co-operative basis.

The following officers were elected: J. W. Green of Bay Minnette, Ala., president; Colin McDonald, Grand Bay, Ala., vice-president; C. B. Lozier, Robertsdale, Ala., secretary and general manager. The board of directors were chosen as follows: R. M. Clare, Calvert, Ala.; Ralph D. P. Brown, Grand Bay, Ala.; H. Brockman, Foley, Ala., and R. M. Storrs, DeFuniak Springs, Fla.

These officers and other prominent leaders in the Gulf Coast movement will put forth special effort to form local clearing houses at every shipping station of any importance throughout the Gulf Coast territory. As fast as capable men can be obtained for the work, organizers will be sent into every locality where organization is practicable. (Any one reading this, desiring such a position, should communicate with Secretary C. B. Lozier at Robertsdale, Ala., without delay.)

The pronounced success of the F. S. E. movement in southern Alabama, under the efficient management of Mr. Lozier, ably and loyally supported by Truman O. Smith, W. Dunnelliff, D. C. McConn, H. Blackburn, W. S. Sure, A. E. Foster and others, is a rainbow of great promise to the planters throughout the south.

Business Men See the Light

We have incorporated the Equity organization in Ravalli County along co-operative lines, each stockholder holding one share and having one vote. Our shares, however, are of different denominations, ranging from \$10 up to \$100 each. Our members are responding cheerfully to the call of Equity. We have just placed an order for 60,000 pounds of sugar, which we get laid down at Hamilton at \$5 per hundredweight, a saving to members of \$1.35 per hundredweight. A year ago opposition to our movement on the part of retailers was strong, but today they, too, see the benefit of Equity, as we are showing both the business man and the farmer the benefits of co-operation on the Equity plan. These two classes are coming thereby to appreciate each other. No stauncher supporters or better workers can be found anywhere than in Ravalli County, Montana.—C. M. Parr, Chairman County Executive Committee.

Lozier Goes to Mississippi

"We had a great time at our last Equity meeting, for we had C. B. Lozier of Alabama with us. Ours is a new local, called Inda No. 7232. Only sixteen of us now, but we're going to double this spring. We put out a total of 2,300 orange trees this spring, also twenty-five acres of pecans, and saved about 50 per cent by buying all together in a bunch.

Mr. Lozier is a sure success as manager of the southern district. The man and the place found each other in this case.

We are a bunch of northern rubes all the way from New York to Nebraska, mostly from Pennsylvania and Indiana. We are green at this game of southern farming. You never will now what real green is until you take a look at our gang. We got car loads of advice from the natives and the government. Paid too much for it. After two years of it, which almost broke us, we sent for "Dad" Lozier to tell us what to do to be saved. He came Saturday, the 14th. He talked from 2 p. m. to 5:30—not oratory—mostly answering questions that came thick and fast. Stood up and talked two hours, then sat down at the question machine for another hour. After that the men bunched around and fired questions broadside and point-blank. Now we know where we're going and are on our way.—M. C. Frank, Local Sales Manager.

Agriculture's Best

I am sending my renewal to UP-TO-DATE FARMING, the best paper for farmers they have ever had. I hope and pray the noble work you have started will develop throughout the United States, and that very soon. Then we will live as people who till the soil should live.—John M. Peckham, Delaware.

Gettysburg Captured by Equity

Though the farmers near the famous war-scarred battlefields at Gettysburg are strong for union, yet as rebels they have captured Gettysburg for union purposes. In other words, they have, under the leadership of District Organizer Kerstetter, unionized themselves to rebel against the too heavy tax of the present system of selling and distributing the products of their farms. A local clearing house of the Farmers Society of Equity, with twenty-eight members, was organized as a starter.

An earnest staff of Equity leaders is pushing the work vigorously in the Keystone state. Forringer, Switzer, Kerstetter, Lenker and others are successfully marshaling the farmers' forces in the Better Business Brigade.

Others Have to Take Back Seat

Can't possibly do without UP-TO-DATE FARMING. I take several papers and magazines, but neglect all others when your publication comes around.—George W. Stanton, Missouri.

Same to You

Your paper is O. K.—fine and dandy. I wish you and the paper and its patrons all a long and pleasurable success.—Armour Bell, Pennsylvania.

In a Class by Itself

You stand at the head of your class—in fact, so far ahead that you are in a class by yourself—a brave and efficient pioneer, almost out of sight beyond the rank and file of farm journals, which hash and rehash the same old "advice." Brother Everett, I am proud of you.—Ila J. Marsh, Missouri.

Unseen Forces Behind Your Telephone

THE telephone instrument is a common sight, but it affords no idea of the magnitude of the mechanical equipment by which it is made effective.

To give you some conception of the great number of persons and the enormous quantity of materials required to maintain an always-efficient service, various comparisons are here presented.

The cost of these materials unassembled is only 45% of the cost of constructing the telephone plant.

Poles

enough to build a stockade around California—12,480,000 of them, worth in the lumber yard about \$40,000,000.

Telephones

enough to string around Lake Erie—8,000,000 of them, 5,000,000 Bell-owned, which, with equipment, cost at the factory \$45,000,000.

Wire

to coil around the earth 621 times—15,460,000 miles of it, worth about \$100,000,000, including 260,000 tons of copper, worth \$88,000,000.

Switchboards

in a line would extend thirty-six miles—55,000 of them, which cost, unassembled, \$90,000,000.

Lead and Tin

to load 6,600 coal cars—being 659,960,000 pounds, worth more than \$37,000,000.

Buildings

sufficient to house a city of 150,000—more than a thousand buildings, which, unfurnished, and without land, cost \$44,000,000.

Conduits

to go five times through the earth from pole to pole—225,778,000 feet, worth in the warehouse \$9,000,000.

People

equal in numbers to the entire population of Wyoming—150,000 Bell System employees, not including those of connecting companies.

The poles are set all over this country, and strung with wires and cables; the conduits are buried under the great cities; the telephones are installed in separate homes and offices; the switchboards housed, connected and supplemented with other machinery, and the whole Bell System kept in running order so that each subscriber may talk at any time, anywhere.

PAPERS THAT OPPOSE THE F. S. E.

This is a time for farmers to know their friends and their enemies, so they may support the people and institutions that are sincerely working for better conditions in farmers' business and withhold support from those that openly or insiduously oppose farmers' efforts to organize right, for complete co-operation. There never was a time when so much deception was practiced against farmers by people who ought to be the most active in leading them in ways that will bring about that country uplift that all people pretend they want to see. But many of farmers' pretended friends are more willing to leave them in a helpless condition, in business, than to do anything that might interfere with the graft they, or their friends, may be enjoying.

The Rural New Yorker, an old offender against the Equity Society, and an ardent hater of J. A. Everitt, its founder and president, has broken loose again. It appears a Mr. "A. L. G." of Idaho submitted a Farmers Society of Equity circular to the publisher of that paper for his opinion. The publisher, in an apparently frank confession, said, in the issue of the paper of February 21, 1914: "We know little of this particular scheme, but we have known James A. Everitt long enough to know that he will profit personally by any scheme that he originates."

In other words, the publisher of the Rural New Yorker first professes ignorance of the F. S. E., while the fact probably is that he knows it so well that he can not afford to attack it, so he directs his stab at the president, knowing that if he can weaken farmers' confidence in an officer, he has accomplished his real purpose; to retard the development of an organization that he is opposed to.

The specific charge is this: "Mr. Everitt can not afford to pay agents to solicit subscriptions for his paper alone. In order to pay the agent he must have some other scheme on which to collect fees. The Society scheme affords the opportunity."

There was also something about Mr. Everitt being dropped from an old organization "by the sincere men and that he is now trying to work the scheme all over again with a new organization." For a truth, no person in the country knows better than the publisher of the Rural New Yorker that the "sincere (?) men" he refers to were the agents of just such people as we have always warned farmers against (and some of them may be publishers of farm papers, too). Briefly stated, the "sincere men" conspired to get control of the "old organization" to change its plans so it would be more than half an organization for organized labor. They did secure control and Mr. Everitt refused to go with them. Later the "sincere men" landed in jail for their crimes and the old organization went to "pot." Then Mr. Everitt came to the rescue and once more started the society along the original lines which were so successful then and which are phenomenally successful now.

It is a matter of record that Mr. Everitt spent of his own money to establish the first society, and then to re-establish it, more than \$15,000, without any certainty, at the time, of it ever being repaid. Also the farmers may be interested to know that in the first and second society he has given twelve years of his time and has drawn in salary exactly \$2,050. The official paper he is interested in receives 25 cents out of the membership fee of \$2.50. If it is a crime to accept 25 cents for a paper that is fighting farmers' battles like UP-TO-DATE FARMING is, and which a million dollars could not swerve from the course that it has consistently held to for twelve years, what is the degree of crime committed by the publisher that collects \$1 per year and whose paper has probably done more than any other one thing to retard farmers' efforts to organize themselves along practical lines?

The question will be asked, why does not Mr. Everitt or the Farmers Society of Equity prosecute the publisher of the Rural New Yorker? Our answer is, just be patient. We intend to do it. Besides, the farmers will do a plenty to him by the "stop my paper" route.

Question Box

QUESTION—Our local clearing house passed resolutions disapproving the advance in the membership fee to \$2.50 against \$2 as formerly. A very small fee looks large to the farmer and we feel that it will be more difficult to get new members at the higher rate.—A. O. Alexander, Secretary, Arnold (Neb.) Local Clearing House.

ANSWER—The national convention had the best interests of the organization in mind when the increase was decided on. For instance, there must be money to push organization, and the old rate seemed to be inadequate. It was also argued that as many members could be enrolled at \$2.50 as at \$2. The experience at headquarters since the convention seems to confirm this opinion. At any rate, the members are coming in several times as fast as before the convention. The time will come when the growth of the society in members will be so rapid that probably \$1 per member will be enough to meet all legitimate expenses. Farmers should always keep in mind that they have been paying enormously for having their business done by others. Compare the former cost with what they are compelled to pay to build their own marketing machine and run it.

Your Seed Corn

Latest News from Dallas, Texas—"Farmers Interest variety won world's sweepstake prizes for ten best ears and single ear of white corn at International Corn Exposition, 1914."

You can start where corn breeders have brought this corn after eighteen years of systematic breeding. For you to breed up your corn to equal this would require many years of painstaking care and cost more than a thousand dollars to get a bushel. For a nominal price you can buy seed of this corn to plant your crop and you can depend on a big increased yield over any other seed you can plant.

Farmers Interest Corn is the best quality and greatest yielding corn in America. Thousands of customers have enthusiastically testified to this. We print many such letters. Some of the growers live in your county. This corn might be called

The best-bred corn in the country, none excepted.

Twenty Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1908.

The general farmer can not afford to take the time and go to the trouble of breeding corn like our Farmers Interest has been bred. But he can profit by the years of work of the breeder by planting this great variety. This corn was bred like cattle and horse and hog breeders breed the fine stock, that any farmer can get today.

Mr. Corn Grower: The cheapest way and the best way for you to quickly get that improvement in quality and yield of your corn that you are thinking about is to buy Farmers Interest Corn of us this year.

Ten Most Perfect Ears. First Prize in Class Open to World. Missouri State Fair, 1911.

doing it right along with Farmers Interest. REMEMBER, THE EASIEST WAY TO IMPROVE YOUR CROP IS TO LET THE OTHER FELLOW DO THE BREEDING.

A great many farmers must buy seed corn this year, so why not start at the very tiptop of perfection by getting Farmers Interest seed corn?

No other corn has such a record for premiums won. We show only a few prize-winning lots

THE ALL PREMI-UM CORN, because it has almost invariably been awarded the highest prizes wherever exhibited.

Ten Most Perfect Ears. Grand Sweepstakes, Open to World. National Corn Exposition, Chicago, 1907.

Ten Most Perfect Ears. First Prize. Indiana State Fair, 1908.

Most Perfect Bushel. Grand Sweepstakes, Open to World. National Corn Exposition, Omaha, 1909.

others. Our catalog shows. You should send for it before you lay this paper aside. Established 1880 In the Center of the Corn Belt **O. K. SEED STORE, Dept. 13, Indianapolis, Ind.**

Read a Few Letters from Farmers We Have Hundreds of Reports from All Over the Corn Belt

WILL MAKE NO MISTAKE
Ill.—I have been raising the Farmers Interest Corn for a number of years. I have found it to be an enormous yielder and a great drought resister on account of its rooting very deep. Farmers who plant F. I. will make no mistake.—J. N. Bond County, Nov. 26, 1913.

YIELDS ABOUT TWICE AS MUCH
Ohio—Farmers Interest yields about twice as much as other corn does. One-quarter of an acre produced about 25 bushels.—C. W. R. Lawrence County.

100 TO 120 BUSHELS PER ACRE
Ind.—The Farmers Interest Corn is yielding 100 to 120 bushels an acre all over my field. Nothing like it ever seen in all this section before.—L. C. Johnson County.

DOUBLED THE YIELD
Ark.—I am well pleased with the Farmers Interest Corn. It more than doubled in yielding any other variety I planted. I have come to the conclusion that it is the best all-around corn I ever planted. It stood the drought better than any other kind.—S. J. C. Yell County, Nov. 24, 1913.

LIKE ARMS OF GIANTS
Kans.—I visited my brother in Kans. and saw his field of F. I. Corn. I never saw its equal all my way to Kans. and return. The ears look like arms of giants. He wrote me it yielded 114 bushels an acre.—A. M. T. Knox County, Indiana.

EVERYTHING YOU CLAIM FOR IT
Kans.—My experience with the Farmers Interest Corn leads me to say that it is everything you claim for it. Will produce with any variety of corn grown in Kans.—W. M. T. Franklin Co., Dec. 1, 1913.

FARMERS INTEREST IS O. K.
Ark.—The Farmers Interest Corn is O. K. and you may use my name if it will influence others in this state to plant this variety.—P. O., Nov. 24, 1913.

ONE-THIRD AHEAD OF OTHERS
Ga.—Farmers Interest is fully one-third ahead of other varieties I raised on the same kind of land.—C. W. H. Catosa Co.

STAYED GREEN DURING DROUGHT
Ia.—I am unable to tell what the yield of my F. I. Corn was this year, as I "hogged" the corn. However, I think 60 bushels per acre a reasonable estimate, while I estimate for other varieties at 35 bushels and not more than 40 bushels per acre. The ears of the F. I. were larger sized and the stalks were never fired, but stayed green throughout the entire droughty season.—T. A. Mahaska County, Nov. 27, 1913.

BEATS ALL
Tenn.—Farmers Interest beats all other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H. Claiborne County.

Woman's Work and Welfare
Helpful Hints for Homefolks

COMPENSATION

The housewife is tolling, she's baking, she's boiling, she's cleaning the windows, she's sweeping the floor; she's sewing on patches and picking up matches and chasing the agents away from the door. She's cooking, she's canning, she's scheming, she's planning; she's looking for dust with her eye to a lens; she's laboring hard in the early spring garden; she's begging the neighbors to keep up their hens. She's dyeing her dresses and sweetly confesses they'll look pretty well when they're turned inside out; she's putting up pickles to save a few nickels, she's whacking up cabbage to make into kraut. There's no rest or playtime through all the long daytime, there's nothing in sight that would make her heart glad; and even when she's sitting she takes up her knitting to fashion a sock or a muffler for dad. Oh, why should a woman do tasks superhuman? What pleasure to her does existence accord, and what is the querdon that pays for the burden—where finds she the profit, and where the reward? Her husband is coming, a roundelay humming, he calls her a pet name and gives her a kiss; her weary face brightens, with love her eye lightens, she seems quite content with such payments as this!

WALT MASON.

Fireside Social Chats
By Aunt Sophia and Others

FIRESIDE SOCIAL CHATS
By Aunt Sophia

WE ARE all glad, of course, with the bluebirds and robins, that the season for renewing life and nature's active work for humanity is at hand. Nature has had her rest, and we too have rested from many duties, and with the warming up of vegetable life we will take up our summer time duties, refreshed, and with joy and gladness. Now we plan and plant the garden, the flower beds, clean house, rake the lawn and tidy up all around.

Did you ever notice how really better folks feel and act towards each other on Sundays when, after the morning's work is done, they wash up and array themselves in holy-day garments? This cleaning-up and resting process is a great rejuvenator and it makes us cleaner in thought, in spirit, and in temper. It puts good nature into us, and makes the milk of human kindness flow and fill the wells of human sympathy. It seems to lift us all to a higher plane, gets us away from things that seem sordid and tend to sour us. Perhaps not all of us realize it, but it does actually make us stronger, sweeter, better, and is a real uplift. In our family we have long recognized this and we make it the invariable rule, no matter what the weather, to brighten up on Sunday. The influence of this lasts all through the week. It is especially valuable to the young natures in process of molding character.

The same thing is true of the spring time of the year. The general cleaning up and beautifying helps to renew in us the springtime of life.

Think of these things while you work and sing with the bluebirds and robins.—Aunt Sophia.

TO KEEP TEA TOWELS WHITE

Place in a jar of buttermilk which is kept for this purpose. Put in this as they are accumulated and let remain until wash day.

They are much easier washed as well as being very white.—Mrs. H. J. Peterson, Montpelier, Idaho.

A RECIPE FOR MEAT AND VEGETABLE SOUP

The United States Department of Agriculture recommends a wholesome meat and vegetable soup which will furnish enough for a family of five at a cost of approximately 16 cents. This may be made according to the following recipe:

Ingredients and Approximate Cost (prices actually paid by Department of Chemistry)
—One soup bone, weighing about 24 ounces, one-third meat, 10 cents. After being washed it should be placed in a large kettle with three pints of cold water and heated for three hours, when the bone and meat should be removed. One-fourth of a small head of cabbage, one onion, one carrot, one large potato, two small tomatoes, a little flour, seasoning, 6 cents. Chop these vegetables and add to the soup. Boil the mixture for one hour, thicken slightly with a little flour and season with salt and pepper.

The home-made soup made according to the above recipe contains, in addition to meat extractives, gelatin from the bone, some of the food elements in the vegetables and a large proportion of the fat and meat of the bone.

DO NOT LET FAT BURN IN COOKING

The unpopularity of fried food in many families is due entirely to the fact that the fat has been burned in cooking. Fat when heated to too high a temperature splits up and may form substances which have an irritating effect on the throat and may cause diges-

tive disturbances. Fat in itself is a very valuable food, and if it is not scorched should prove a healthful rather than an objectionable article of diet. A slightly burned taste and similar objectionable flavors can often be removed from fat by putting into it thick slices of raw potato and heating it gradually. When the fat ceases to bubble and the potatoes are brown, the fat should be strained off through a cloth placed in a wire strainer.

RAISING CHURCH FUNDS

A woman chanced to have in her possession a recipe for cake which was quite new in her community, and as the people were trying to raise money on a church-building fund, she had the recipe type-written and sold for 25 cts. a copy. At the bottom of each one was written: "The proceeds of this recipe will go towards the building fund. Please do not give it away, except for twenty-five cents." A nice little sum was cleared up from this alone.

Taken Unawares

"Hello, Smith! Was it you shooting this morning?"
"Yes, I had to kill my dog."
"Was he mad?"
"No, he didn't know I was going to kill him!"

TERRIFF'S LAST and most perfect INVENTION

The New Gravity Washer

The master effort of a lifetime devoted to the study and manufacture of Washing Machines. It is an undisputed fact that Wm. W. Terriff invented and put on the market more and better washing machines than any other man. The New Gravity Washer was his masterpiece. It will wash anything from a pocket handkerchief to underclothes and the heaviest bedding perfectly clean. And the gravity principle makes it run so easily that a child can operate it even with a heavy load. The last year of Mr. Terriff's life was largely devoted to writing his biography, which he published under the name of "Twenty-Four Years Hustling in the Washing Machine Business Under Two Flags." We will send you this interesting and instructive first washer without costing you a single penny. Don't delay—write today to

WOLVERINE WASHER COMPANY, 300 Canal St., PORTLAND, MICH.

Dept. 1,
Indianapolis, Ind.

It is far beyond expectations. If I couldn't get another I wouldn't take \$5 for it.—O. F. Folk, Elk Lick, Pa.
Worth \$10 to me. I can see cattle at 15 miles and a nickel at 60 yards.—Tervis S. Sepeda, Morgan Hill, Cal.
It's a dandy; all you claim and then some. I trained it on the Buttes, 28 miles away. They looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away.—Chas. A. Story, Ft. Robinson, Neb.
Every boy and man on a farm needs one.—Chester Housen, Minden, Ga.
Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Connor, Manor, Tex.
Can see children playing at school 6 miles away.—P. H. Herrington, McDade, Tex.
Can tell time on clock 2 miles away.—J. Beers, Columbus, Ind.

What is Now the Fashion

6561. LADIES' TAILORED WAIST.—This waist has a center front closing, made with the usual box pleat for studs or buttons. The neck may be finished with a band for linen collars or it may have a larger, permanent collar. In the back there is an applied yoke, but this may be omitted if desired as the waist is complete without it. The regulation shirt sleeve is used, plain at the shoulder and finished with gathers and a cuff at the wrist. Sizes 34 to 44 inches bust measure. Medium size requires 2½ yards of 36-inch material.

6602. LADIES' WAIST.—More dressy and in a style which is better liked at present than 6561. This has a narrow shoulder yoke, which is formed by extending the back forward a little. The fronts are gathered below this yoke and attached with an ordinary seam or with beading. At the neck is either a large collar or a frill as preferred, the pattern providing both styles. The drop shoulder is used and a plain sleeve which may be shortened as much as desired. Sizes 34 to 44 inches bust measure. Medium size requires 2½ yards of 36-inch material and 2 yards of lace ruffling.

6618. YOUNG LADIES' FLOUNCE SKIRT.—There is nothing newer than the tier or flounce skirt. It may be worn with separate waists or it may form part of a costume. No. 6618 shows an ideal model in this style and one which may be developed in soft woolen materials such as chevot or voile, or in cottons like cotton crepe, voile and mercerized fabrics as well as in silks of the softer type. This skirt has a two-piece foundation and on this two flounces are applied, either of which may be omitted. There is also a gathered piece which extends above the girdle, and this also may be omitted if desired. Sizes 14, 16, 18 and 20 years. Medium size requires 2½ yards of 44-inch material for the skirt and 2½ yards of 36 or 44-inch goods for the foundation.

6606. LADIES' HOUSE DRESS.—A house dress which will be liked by the woman who is neat and active. It has a plain waist, closed at the side of the front and with a small tuck at each shoulder, extending to the waist in front and back. The seven-gore skirt may have an under box pleat in the back or habit finish as preferred. Cashmere, challie, linen, gingham and other wash fabrics are used for these frocks. Sizes 34 to 44-inch material.

6605. LADIES' APRON.—This model for the busy housewife has a full length front panel and sides which extend only to the belt. Straps continued from the front pass to the belt in the back and support the apron. Sizes 34, 38 and 42 inches bust measure. Medium size requires 4¼ yards of 36-inch material, if made with ruffle or without it.

6593. YOUNG LADIES' FROCK.—Young girls have not been forgotten by the style makers and we show a dainty and serviceable frock. This has body and sleeve in one piece and a long or short sleeve. The closing of the blouse is in front. The four-gore skirt has a panel front and back and a side front closing. Sizes 14, 16, 18 and 20 years. Medium size requires 4¼ yards of 44-inch material.

6604. GIRLS' FROCK.—This shows a pretty frock for a little girl. It has a box pleat in front and back and a deep yoke facing which may be omitted. There is no division of waist and skirt and a belt of leather may be worn. The neck may be trimmed with the large collar or finished in a simple square outline. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 3¼ yards of 36-inch material.

6600. GIRLS' APRON.—Nearly all little girls need an apron at one time or another and we have a very pretty novelty in this garment. It may have long or short sleeves and front or back closing. It has the kimono effect at the shoulder, but there is a seam along the shoulder and outer arm. Sizes 2, 4, 6, 8, 10, 12 and 14 years. Medium size requires with short sleeves 1½ yards of 36-inch material; with long sleeves 2½ yards of 36-inch goods, and in either case one-half yard of 27-inch material for trimming.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

The Harley-Davidson Two-Speed WITH STARTER

It's the last word in motorcycles. The two-speeds are selective, and the rider can shift from high to low or low to high or neutral while the machine is standing still or in motion.

The step-starter does away with the necessity of dismounting and placing the machine on the stand to start. The rider may sit in the saddle with both wheels on the ground and give either pedal a downward push, engaging the step-starter and starting the motor.

1914 Catalog on request

HARLEY-DAVIDSON MOTOR COMPANY

Makers of High-Grade Motorcycles For More Than Twelve Years

(We prepare transport, tin charges.) **The Scott P. Redfield Co., 1144 Main St., Southampton, Pa.** **THE BOYS' MAGAZINE** is on sale at all news-stands.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

H OPE comes with the spring. As the farmer puts his seed in the carefully prepared ground and covers it from mortal sight, he is prompted by hope, and through the days that are to come he sees a time of reaping. It is thus with the young mind. The world seems very large, and the future weeks, and months, and years seem almost limitless. Hope illumines every one and drives away many periods of darkness. But accomplishment requires effort. We would have our young friends live in the atmosphere of effort. Something must be done every day; something that will lead onward and upward. Those who have the courage to travel that road cannot fail.

Our first letter this time shows what a large family can do, or could do a few years ago, in taking homesteads in the West. We suppose such opportunities are rather scarce now.

DEAR CADETS: I am a Colorado boy, and I would like to join the Cadets. I am a reader of UP-TO-DATE, and I enjoy it very much. I am 16 years old, and have lived on the farm all my life. I have six brothers and four sisters. Two brothers and one sister are married. My father and four brothers homesteaded nine quarter sections of land here. So you see we have a large farm. We have 8 horses, 9 head of cattle and some hogs. We did not have very good crops here last year; it was too dry. I would like to exchange post cards and letters with the Cadet boys and girls, and promise to answer all, as I get lonesome away out here in Colorado.—Thos. A. Jones, Stratton, Colorado.

This southern girl likes our Woman's Work department, as do all of our lady readers:

DEAR CADETS: I am a reader of UP-TO-DATE FARMING, and enjoy it very much. I always look first for the page on woman's work, then turn to the Cadet page. I am 18 years old, and live on a farm of 65 acres in the Sunny South. I wish every one could have a chance to enjoy our delightful climate. Baldwin county is considered the garden spot of the South. I live about 12 miles from the bay, and we often go there to bathe. Violets have been in bloom (Feb. 25) for more than two weeks, and we always have roses. I would be glad to exchange letters or cards with any of the Cadet boys or girls, and will answer all I receive.—Verna Sinnett, Robertsedale, Ala.

DEAR CADETS: I wish to become a Cadet of Equity. My father has been taking UP-TO-DATE for several years, and I enjoy reading the letters. I am 19 years old, and have lived on a farm all my life. Our best crops are corn, wheat and oats. I would like to receive cards from the Cadet girls and boys and will answer all I receive.—W. W. Hronda, Ludell, Kan.

DEAR CADETS: I am a Mississippi girl, 15 years of age, and I would like to become a Cadet of Equity. I live on a farm about two miles from town. I think country life is much happier and sweeter than town life. I like to go to school, but I have not been to school a single day this term. Mamma has been sick all winter, and I am the cook. I would like to exchange letters and cards with the Cadets and will answer all I receive.—Fannie Windham, Moselle, Miss.

DEAR CADETS: I am a reader of UP-TO-DATE FARMING and think it a fine paper. I am 16 years old May 9, and live with my folks on a 120-acre farm. I, too, would like to become a Cadet, and would be glad to exchange cards and letters with the Cadet boys and girls; will try to answer all.—Margie Hansen, Callender, Ia.

DEAR CADETS: I would like to become a Cadet of Equity. My brother takes UP-TO-DATE and I enjoy reading the letters very much. I am a Tennessee girl, 15 years of age, and live in the country about two miles from Camden, a little town of about 1,000 inhabitants. I would like to exchange cards with the Cadet girls and boys, and will answer all I receive.—Rhoda Bomar, Camden, Tenn.

DEAR CADETS: I am 16 years old, and am a town girl. I like town life better than country life. I like very much to read the letters, and would like to exchange letters and cards with all the Cadet boys and girls; will answer all I receive.—Isia Horton, Belgrade, Mo.

DEAR CADETS: I am an Illinois girl, 15 years of age, and I live on a farm of 120 acres, two and a half miles from town. I graduated from the country schools two years ago, and I am now in the second year high school. I enjoy reading the Cadet letters very much, and I hope all the Cadets will write to me. I will try to answer all I receive.—Clara A. Griesemer, Hopedale, Ill.

DEAR CADETS: I am a reader of the dear old UP-TO-DATE FARMING, and think it a grand paper. I am always ready to read when it comes. I am a Kentucky girl of sweet 16, and as jolly as can be. Hoping to hear from the Cadets I close with three cheers for UP-TO-DATE.—Mary Belle Carter, Eminence, Ky.

DEAR CADETS: I am a country girl, and live three miles from town, but I attend the town school. I live on a farm of 227 acres and we raise most all kinds of grain. I like pets, and have a young mare named Lady May that I very much like to ride. I had three white rabbits, but Ted, my dog, killed two of them. I would like to exchange postcards with all the Cadets; will answer all received.—Louise Shores, Wytheville, Va.

DEAR CADETS: I am a country girl, 18 years of age, and am living on a 212-acre farm. I am in my sophomore year in high school and I drive to school, 4 miles and a half, every day. I am a great lover of books, flowers and music. I play the piano and violin fairly well, and am in two orchestras. I love the work. I am a constant reader of UP-TO-DATE, and think it is a good farm paper. I would enjoy exchanging letters and cards with the Cadet boys and girls, and will answer all I receive.—Jessie Croft, Polo, Ill.

DEAR CADETS: I am a western boy, 18 years of age. I was born in the west, and live on Puget Sound. I am going to school at present, but I always have a little spare time.—Hilmer L. Johnson, Richmond Beach, Wash.

DEAR CADETS: I am a farmer's daughter, 18 years old, and live with my parents and a brother and three sisters, on a farm of 150 acres. My father has been taking UP-TO-DATE FARMING for a year and we think it a fine farm paper. I enjoy reading the Cadet letters, and would like to become a Cadet of Equity. I will answer all letters and cards received. Would like to hear from the different States.—Laura Lane, Delabole, Pa.

DEAR CADETS: I am an Ohio girl, age 18 years, and am the oldest in a family of five. I live on a farm of 81 acres. My father has 4 horses, 11 head of cattle, and 6 hogs. We milk 4 cows. I take UP-TO-DATE and I like to read the Cadet letters and other things about the farm. I have lived in three different States—Missouri, Oklahoma and Ohio. I have lived on a farm most of the time. I would be glad to exchange letters or cards with the Cadet boys and girls, and will answer all I receive.—Ethel Neal, Seaman, O.

DEAR CADETS: I am a farmer girl, 14 years old, an 8th grade pupil in a rural district school. My papa is a merchant and has a general store in a village called Absher. We live a quarter of a mile from the village. UP-TO-DATE has been coming to us nearly two years. I enjoy reading the Cadet letters. I have written to a few of the Cadets and have received pleasant replies. I attend Sunday school at what is known as Old Indian Camp Baptist Church, half a mile away. Will be pleased to receive cards and letters from the Cadet friends, and will answer all I receive.—Lola Shreve, Crab Orchard, Ill.

DEAR CADETS: I am a New Hampshire girl, 13 years old, and I would like to join the Cadets. My brother has taken UP-TO-DATE FARMING for two years, and thinks it is a fine paper, especially for the farmers. We used to live on a farm of 100 acres, but we recently moved into a village. I would like to hear from the boys and girls, and will answer all I receive.—Thelma Parsons, Pittsfield, N. H.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

What 15c Will Do The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but \$1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. Or send \$1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

Kitchen Apron Pattern GIVEN This useful model has a fitted front panel and shoulder straps formed by an extension of the large pockets which are stitched in at the side front seams. The sides and back of the apron begin at the waistline and are slightly gathered. Gingham, calico, cambric and white materials are used for these aprons. The pattern 6468 is cut in sizes 34, 38 and 42 inches bust measure. Medium size requires 4 1/2 yards of 27-inch material. To quickly introduce our big home and family magazine we make this liberal offer good only 20 days. Send 10 cents for trial 3 month subscription and enclose names of 5 house-keepers and we will send this popular apron pattern free. Be sure to send size and say you want apron pattern No. 6468. Address **THE HOUSEHOLD, Pattern Dept. 105, Topeka, Kansas**

BURNS BARRELS OF AIR NOTHING ELSE LIKE IT! **MOST WONDERFUL COMBINATION STOVE EVER INVENTED—CAUSING GREAT EXCITEMENT** WHEREVER EXHIBITED. Uses barrels of air while consuming one gallon of oil. Wood, coal and oil cost money—ONLY FREE FUEL IS AIR. Supply unlimited. No trust in control. Air belongs to rich and poor alike. **PORTABLE VALVELESS WICKLESS AUTOMATIC OIL-GAS AND AIR BURNER STOVE**

Automatically generates gas from kerosene oil, mixing it with air. Burns like gas. Intense hot fire. Combustion perfect. To operate—Turn knob—oil runs into burner—touch a match, it generates gas which passes through air mixer, drawing in a large quantity of air, to every spoonful of oil consumed. That's all. It is self-regulating, no more attention. Same heat all day, or all night. For more or less heat, simply turn knob. There it remains until you come again. To put fire out, turn knob, raising burner, oil runs back into can, fire's out. As near perfection as anything in this world. No dirt, soot or ashes. No leaks—nothing to clog or close up. No wick, not even a valve, yet heat is under perfect control.

D. CARN, IND., writes: "It cost me only 4 1/2 cents a day for fuel." L. NORRIS, VT., writes: "The Portable Oil-Gas Generators are wonderful savers of fuel, at least 50% to 75% over wood and coal." E. ARNOLD, NEB., writes: "Saved \$4.26 a month for fuel by using the Portable Oil-Gas Stove. My range cost me \$5.50 per month, and the Portable only \$1.25 per month." M. KING, VA., writes: "Using one Burner and Radiator, I kept a 16x18 foot room at 70 degrees, when out doors 13 to 20 degrees were registered." REV. WM. TEARM, ME., writes: "This morning 16 below zero, and my library far below freezing point. Soon after lighting the Portable Oil-Gas Stove temperature rose to summer heat." WM. BEARING, IND., writes: "We warmed a room 18x14 feet, when it was about 10 below zero with one Radiator."

Not like those sold in stores. Objectionable features of other stoves wiped out. Ideal for heating houses, stores, rooms, etc. with Radiating Attachment; also cooking, roasting, baking, ironing, etc. No more carrying coal, kindling, ashes, soot, dirt. Absolutely safe from explosion. Not dangerous like gasoline. Simple, durable—last for years. Saves expense, drudgery and fuel bills. All Sizes. Prices Low—\$3.25 and up. Sent to any address. Send no money—only send your name and address. Write today for our 30 day trial offer—full description—thousands of testimonials, 1914 Proposition.

World Mfg. Co., 4289 World Bldg., Cincinnati, Ohio.

How to Pitch the "Fade-away"

By **Christy Mathewson**
of N. Y. Giants

FREE

Boys, it's free! Complete, personal instructions from Christy Mathewson, himself, showing you how to pitch his famous "fadeaway," so the best batter in your town can't hit it safe. Send no money—simply write and ask for Mathewson's complete instructions. He will show you plain as day how to throw this baffling, puzzling, uncatchable "fadeaway"—the curve that the best batsmen in the National League can't hit, that has won the pennant for the New York Giants three consecutive years. Boys, with this curve you can make all the other boys in your town look like monkeys—you can simply play horse with them—you can be as much feared by batters, and cheered by the fans as Mathewson is in the National League. For "Matty" shows it all to you.

All-ABSOLUTELY FREE

He explains every secret of his pitching to you—how to stand, how to grip the ball, how to "wind-up," how to let it go. Photographs of every move make it all plain as A-B-C, so anybody can master this great curve at once and become the pitching hero of his town, the boy whose team is bound to win. It doesn't cost you a penny—the complete instruction is free, just for delivering a few papers. Don't wait a day to learn how to throw the "fadeaway," get it first and put one over on the other boys. Send no money—simply write and say "send on the papers to deliver and give me free, Mathewson's complete instructions. Address W. D. Boyce Co., Dept. 305 Chicago.

Lots of Fun for a Dime

Ventriloquist Double Throat or Swiss Bird Call.—Fits roof of mouth, always invisible; greatest thing yet. Astonish and mystify your friends. Neigh like a horse, whine like a puppy, sing like a canary, and imitate birds and beasts. Loads of fun. Wonderful invention. Postpaid 10 cents.

Up-to-Date Farming = Indianapolis

DEAR CADETS: I live on a farm of 80 acres in the southeastern part of Idaho. This is mostly a farming country and produces abundant crops every year. There is quite a lot of stock raised, but it is raised on the farms, as most of the range is now taken up for dry farming. They raise good crops on the dry farms when it is a wet season. The dry farms sell for \$20 to \$25 per acre. Irrigated, velly farms sell for \$75 per acre; but where we live, there being no gravel, the land is worth from \$100 to \$125 per acre. I am 18 years old, and would like to exchange view cards with the Cadets.—Pearl Wade, Rigby, Idaho.

DEAR CADETS: After seeing so many letters in UP-TO-DATE I decided to write one. I am 15 years of age and live on a farm with my parents. I have one brother older than I and a sister younger. My school closed in January and will not open until April. My brother takes UP-TO-DATE and we think it a fine paper. We are having lots of snow and cold weather now (last of February). My sister and I are taking music lessons and like it fine. I will answer all letters and cards from any of the boys or girls who write me and will also exchange photos.—Goldie B. Grant, Brooks, Maine.

DEAR CADETS: I am 15 years old, and live on a farm of about 640 acres. The surrounding country is smooth and level. I am a freshman in a nearby high school. The agriculture class, of which I am a member, find UP-TO-DATE very interesting. Cadets, please write me. I think it is helpful as well as entertaining. I will answer all I receive.—Ethyle Kaitreider, Pinson, Tenn.

DEAR CADETS: I am a Nebraska boy of 18 years. I read UP-TO-DATE FARMING and think it a good farm paper. I live on a farm of 302 acres. We raise lots of corn and small grain, also some cattle. I am going to move to Missouri this spring. Would like to exchange cards and letters with all the Cadets; will answer all I receive.—Paul Henderson, Angola, Neb.

DEAR CADETS: I am a farmer girl, 15 years old, and I wish to become a Cadet; but I am studying to be a stenographer. I have been at the city of Evansville for the past four months, but I am at home now to stay until the first of April. UP-TO-DATE has been a welcome visitor to our home for the past four years, and we all appreciate it very much. We live near the Ohio river on a farm of 80 acres. The chief products are corn, wheat and hay. We haven't many hills here and the land is level. I have five sisters. Two are at home, one is married and one is at Evansville, which is about 60 miles from home. I would like to correspond with the Cadets, especially those in the eastern states, and in Michigan, as I am going there next July on my vacation. We are going through in an auto and it will take us three days. The summer resort is St. Joseph and it is near Benton Harbor.—Ethel Haaff, Rockport, Ind.

DEAR CADETS: I am a Virginia boy, 13 years of age, and live on a farm of 230 acres. I have two brothers, but they are younger than I am. My father is county surveyor, and is away from home most of the time, so I have to look after the farm. I have finished free school, and am ready for high school. I live 3 miles from the high school, and 8 miles from the nearest railroad station. I have been taking UP-TO-DATE for almost a year, and find it an interesting, and important paper. I would like for some of the Cadet boys and girls to write to me; I will answer all that do. Giles H. Huffman, Sinking Creek, Va.

DEAR CADETS: I am a Missouri boy of 19 years, and have been an earnest reader of UP-TO-DATE for nearly four years. I think it a grand paper. I recently got interested in the Cadet page. I live on a farm of 120 acres with my father and three sisters and one brother, my mother having been dead for five years, and I kept house for my father until my sisters got large enough to keep house, and then I turned it over to them. I have lived on a farm all my life, and I like farm work better than any other work I can think of. My home is near Embrose, in Texas county, Mo. Our main crops are corn and hay, though in some places wheat and oats do well. There was quite a bit of corn raised in this state last summer in spite of the drouth. Apples and peaches are also a staple crop here, and there was a large crop of both last summer. I would like to hear from all the Cadet girls and boys, and will answer all I receive.—Roy Davis, Embree, Mo.

DEAR CADETS: I live on a farm of 200 acres in the old Magnolia state. Our main crops are corn, cotton, hay, sorghum and potatoes. I live 6 miles from the historic little town of Pontotoc, where De Soto with his troop of 1,000 Spanish soldiers spent the winter of 1540, before he discovered the Mississippi river in May, 1541. I think all the letters on the Cadet page are fine. If everybody would read UP-TO-DATE FARMING and get the valuable advice it gives, the farmers would get a great deal more out of farming. I am a school-boy, and I would like to get a letter or card from every state in the Union, and from Alberta, Canada, as I have some relatives there. I will gladly answer all, and tell you more about this southern country.—Tom Tunnell, Springfield, Miss.

It is seldom one finds a list of letters that cover so much of a country as do the above. UP-TO-DATE is read and liked everywhere, and it is our ambition to make each issue better.

5 YEAR GUARANTEE

98 CENTS POST-PAID

To advertise our business, make new friends and introduce our big catalogue of high grade American made watches we will send you this elegant watch postpaid for only 98 cents. Gentle size, high grade gold plate finish, lever escapement, stem wind and stem set, accurate timekeeper, fully guaranteed for 5 years. Send 98 cents today and watch will be sent by return mail. See A World Series Game Boys

GIVEN

This Elegant Suit is for You

Boys, here is the swellest baseball suit that you ever saw. It is a dream. It will make the heart of any boy leap with joy. You can have this suit without a cent of your money. It consists of cap, shirt, belt and trousers of a very substantial material and of very good workmanship. It's a beautiful gray color trimmed in white. It's made in the same way as the suits for the big Leaguers. It's a beauty. If you want this suit, (also gloves, balls, bats, etc.) fill out the coupon below with your name and address.

BOY'S TRIP

To a Big World Series Game This Fall

I am the Publisher of FARM NEWS, and I am going to take ten boys to see one of the big World Series Games this Fall and pay every cent of expense. I am going to furnish each boy with a brand new suit of street clothes, new sweater, new stockings and cap, also a new dress suit case. Will you be one? I am going to call at your home for you at the start of this trip and I am going to look after you every minute from the time you leave home until you return. You will have my personal attention and care. You will not have an opportunity to spend a single penny of your money.

Two Full Days

In the big city seeing the sights

You will have two days in the big city—one day for the big game, and one day for sight-seeing. It is the greatest trip that has ever been arranged for boys by any reputable concern. It will be the sight-seeing trip of your life. You will get to see the great city by automobile. All the principal places in the city will be visited and explained to you. You will travel to and from the city in the best pullman train. While in the city you will stop at the best hotel and the best rooms there are. You will have the best of everything to eat. You will be able to meet the big League players, newspaper men and many of the big baseball owners of world wide reputation. It will be a great trip.

Send This Coupon

I will tell you just exactly how you may obtain this baseball suit and also how you may be one of the ten boys to go on this great sight-seeing trip to the big World Series Game next Fall if you will send me this coupon. It will be a chance that may never come to you again. I know that it is the one desire of every American boy to see the big League players in action and much more, one of these great big World Series Games that attracts world wide attention. This is your chance. Send us your name today.

I want a baseball suit and I want to be one of the boys to go to see the big World Series Game. Please tell me all about it.

**I'll Feed
Your Stock
60 Days
Before You Pay**

**I'll Stop
Your Losses
From Worms
Or No Pay**

**I'll Save
Your
Hogs**

**I'll Save
Your
Sheep**

I'll Prove It On Your Own Stock

I don't ask you to pay me one single cent until you have fed SAL-VET for 60 days and seen with your own eyes it's wonderful merit. I don't ask you to send me a penny until I prove to you, on your own stock, the great value of SAL-VET as a worm destroyer and conditioner. I have shipped tons and tons of SAL-VET to readers of this paper who have accepted my "no money down" offer. I want an opportunity to show you who have not yet accepted it, that it pays, and pays big to feed SAL-VET regularly to all your farm stock — Hogs, Horses, Sheep or Cattle. You have nothing to risk — everything to gain.

**The Great
Worm
Destroyer**

SAL-VET

**The Great
Live Stock
Conditioner**

REG. U.S. PAT. OFF.

makes all animals thrive better, look better, destroys and expels intestinal and stomach worms which prey on the digestive tract, robbing your animals of vitality and strength and keeping them in an unthrifty, unprofitable condition. SAL-VET will put them in condition to get more good out of their feed—makes them thrive faster — stops your losses from worms, makes stock sleek in coat, vigorous in action, and far better able to resist diseases. Millions of dollars are lost every year by stock raisers who do not keep their animals worm-free, healthy, and in a condition to get all the benefits of the rations fed.

Don't Send a Cent—Just the Coupon

Tell me how many head of stock you have and I'll ship you enough SAL-VET to feed them 60 days. You simply pay the freight on arrival—feed it as directed. At the end of two months report results. If SAL-VET has not done all I claim, I'll cancel the charge — you won't owe me a single penny. Send the coupon today and begin action against worm pests—the greatest enemy you have to contend with in raising stock.

My Best Advertisement Is A Pleased Customer

"I am as strong for SAL-VET as ever. Almost every one, in these parts, has lost hogs, but mine are still doing finely, thanks to SAL-VET." Dick Crookham, Lacey, Ia.

"SAL-VET has been a great help to my hogs as none have died since I fed it, although previous to its use, I had a number of losses." T. J. Reed,
Rt. No. 1, Hutton Valley, Mo.

"Hog cholera has swept this part of the country, but for the first time in years, my own hogs escaped. I have been feeding SAL-VET and now I would not be without it for double the price." Thomas Fitzgerald,
Rt. No. 2, Connorsville, Ind.

"I took some of my poorest and weakest pigs, shut them up in a lot by themselves, and fed them SAL-VET in order to make a test. I found SAL-VET all you claim. These pigs are now good, strong, healthy shotes, weighing 125 to 150 pounds. I shall always feed SAL-VET the year 'round." W. A. Kearns, Rt. No. 1, Tampico, Ills.

"Your SAL-VET is certainly all to the good, and you may always count on me to be a booster. When the SAL-VET arrived, our hogs were either all sold or dead with cholera. There were five little runts alive, which were considered as good as dead, but, thanks to SAL-VET they are the best looking hogs of their age in the neighborhood. My one regret is that we did not get SAL-VET sooner, as I feel that we could have saved the whole bunch." LeRoy A. Barrett, Oswego, Ills.

"When the SAL-VET arrived my hogs were sick, and up to that time, I had lost sixteen pigs, all under twenty pounds. After the balance of the pigs had access to SAL-VET, they came through all right, and some of them now weigh 625 pounds, which I consider pretty good. I am talking SAL-VET to every man I meet, as I honestly believe it is the one conditioner and preventive to feed to hogs the year 'round." Ben E. Wootte,
Fruit North Grove Farm,
Rt. No. 1, Milbank, S. D.

"When we butchered our hogs, we found them entirely free from worms, although before we began feeding SAL-VET, one hog in particular seemed badly out of condition and was coarse and rough. When we butchered him, he was the smoothest and fattest hog in the bunch." F. H. Durringer,
Rt. No. 8, Van Wert, Ohio.

**Look For
This Label**
on all SAL-VET packages. Don't be deceived by imitations. Don't buy "Sal" this or "Sal" that; get the original genuine SAL-VET.

PRICES 40 lbs., \$2.25; 100 lbs., \$5; 200 lbs., \$9; 300 lbs., \$13; 500 lbs., \$21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb. of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular sized packages.

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

The Boy Who Leaves the Farm

Boys, if you can find it in you to like the business of farming, provided it can be made to pay you fairly well, don't leave the country for the things you know so little about in the city or town. The way to success can be found there, it is true, provided you have ability, patience, grit, gumption and the willingness to work hard, take rebuffs, deny yourself many things, and keep everlastingly at it. Now the writer of this knows for a surety that these qualifications are absolutely essential to a successful career in business. And he also knows these same qualities can win success on the farm. There is room for a few big successes in the city. There is opportunity for a satisfactory success on nearly every farm. The successful farmer is far better off than the ordinary business man of the city. Better work for yourself in the country than for another in town. However, if farm life is not your sphere, and you feel that with your talent, your ability, love for doing big things and doing them right, you can win in this hard, bitter fight for supremacy in business, then go, and God go with you. The city needs that kind of men.

The Marketing of Eggs

A number of poultry raisers, it seems, are putting on the market infertile eggs that have been tested in incubators from three days to a week. As soon as the breeder finds that the eggs will not hatch he takes them out and sends them to market along with his fresh spring eggs. After the eggs have been in the incubator for this period they are distinctly stale and rot very quickly if kept any length of time. These eggs when they reach the market, however, are classified as low grade No. 2. The mixing of incubator eggs with the fresh eggs leads the egg packers to cut the price they pay the farmer. The spring eggs designed for keeping for winter consumption must be absolutely good. The mixture of infertile incubator eggs with fresh eggs forces the packer to candle the eggs. He then deducts this added expense from the price he offers to the producer. Eggs which have once been subjected to the heat of the incubator can not be stored.

The farmer who sells incubator eggs injures his own market for fresh eggs. When dealers find incubator eggs in their fresh egg supply they lower the price for all eggs so that they will be certain that they have covered themselves against losses from this cause. Use infertile eggs from the incubator for home consumption and send only fresh eggs to market.

Parcel Post is No Remedy for H. C. L.

Postmaster General Burleson has done much in his endeavor to perfect the parcel post for shipping farm products, such as butter, eggs, poultry, vegetables and fruits. He has increased the weights until they are quite satisfactory. He has provided for suitable crates, boxes and baskets to carry them. He has authorized the clerks and postmasters to obtain the names of farmers who have produce to sell, and consumers who desire to purchase direct from the farmers, and furnish to each a list of the others. But after all this there is and will be very little shipping from farm to city kitchens. The one thing lacking is organization. The farmers will require a shipping agent at shipping points to look after shipments. The consumers who desire direct service will require some one with whom they can deal as they deal with their local merchant, some one to guarantee the goods. Even then the mail-order-and-delivery system will be used by but very few city consumers, except they form organizations and purchase club orders. The corner grocery will continue to supply the great majority of the consumers with their supplies. The parcel post is not going to solve either the farmers' marketing problem nor the high cost of living problem, even to a slight degree. It is a great boon in its place, and is a splendid thing for those who can make profitable use of it in either selling or buying eatables. But it does not, will not, can not remove the necessity for the construction and operation of a farmers' co-operative marketing system.

Road Building Funds Wasted

The Office of Public Roads of the Department of Agriculture is making a strong effort to teach the country the fact that maintenance and repair are of equal importance with the improvement of roads.

Investment of money in new roads does not become real economy until provision is made for keeping these new roads in condition after they are built. If a new road was built and then allowed to fall into disrepair, much of the original investment is simply wasted.

Officials of the Office of Public Roads, when called upon for assistance by the various states, are pointing out that road building is an art based on a science, and that trained men and experienced men are necessary to secure the best results from the expenditure of road funds.

Statisticians have found that although the average expenditure on the improvement of roads exceeds one million dollars a day, a large portion of the money in the United States is wasted because of the failure to build the right type of road to meet the local requirements or the failure to provide for the continued maintenance of the improvement.

The various states and counties within the past six months have taken a greater interest in road improvement than ever before in the history of the United States, and there is now a strong movement to conserve the roads of the country where they are improved. And when the farmers become well organized, and in position to have some influence in such matters, they can save to themselves and the country millions of dollars which has been and is being wasted on the roads. Great and varied are the needs for organization of farmers.

FOR SALE—Town lots in all growing towns. Ask for information on industrial and business openings.

1913 RECORD

Magnificent Crops in all Western Canada

All parts of the Provinces of Manitoba, Saskatchewan and Alberta, have produced wonderful yields of Wheat, Oats, Barley and Flax. Wheat graded from Contract to No. 1 Hard, weighed heavy and yielded from 20 to 45 bushels per acre; 32 bushels was about the total average. Mixed Farming may be considered fully as profitable an industry as grain raising. The excellent grasses full of nutrition, are the only food required either for beef or dairy purposes. In 1913, at Chicago, Western Canada carried off the Championship for beef steer. Good schools, markets convenient, climate excellent. For the homesteader, the man who wishes to farm extensively, or the investor, Canada offers the biggest opportunity of any place on the continent.

Balanced Rations

Protect the Farmer

Till fares the land to hastening ills a prey,
Where wealth accumulates and men decay;
Princes and lords may flourish or may fade;
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroyed can never be supplied.
—Oliver Goldsmith.

Poor soil never made a rich farmer.
Ground limestone is the best form for general use.

Some farmers keep sheep to keep the wolf from the door.

Advertising news is good news in this paper. Keep posted.

Wanted—Every one of our readers to have a good silo on his farm.

Begin right now to fight that summer pest and nuisance, the house fly.

If you want your new hired man to do his best for you, do something extra for him.

Lead a man to take pride in his farming and he will soon have a farm to be proud of.

When the old sow begins carrying straw, husks and leaves it is the sure sign of a litter, isn't it?

It will pay, if you give them to understand they must earn it by devotion to duty the rest of the week.

We will soon have dandelion and mustard and watercress "greens," and then we'll lower the cost of living.

Are you going to give the boys and the hired man the Saturday half-holiday this summer? You will find

The man who always farms as though every year was to be a dry year never needs to pray for rain.—O-F-S.

Take care of your teeth. They're worth it. But if you won't take care of your own, see that your children take care of theirs.

The man who boasts that he has a right to make a fool of himself if he wants to doesn't need to do very much more to accomplish it.

A house without a mother is not a real home, but even with one it would be better for mother and all of us if it had a furnace, a bath and running water in the kitchen.

If you mended all the neck yokes, double trees, three-horse eveners and made a few new ones ready for an emergency before the busy days come, you're ahead that much.

When corn is 75 cents a bushel, and butter fat is worth 20 cents per pound, it takes good farming to make more money by feeding the corn to hogs, even at 8 cents on foot.

A Tennessee dinky has the right idea of what constitutes a good dairy cow. "I want a cow I can pick up and tote, and when I sets her down and milks her I-kaint tote the milk."

Put every load of the well-rotted yard manure right out on the garden spot and work it in thoroughly. No matter how rich you think your garden is, cover it with manure. It will pay.

Crop Reports and Farm Benefits

WE HAVE often expressed doubts of the benefits derived by the farmers from the crop reports issued by the national Department of Agriculture. In fact, there can be little room for doubt on that subject. Under present methods of price making and marketing of farm crops those reports must be more benefit to the buyers than to producers. If the acreage is excessive the reports come too late to enable the farmers to make any change—the crops are already planted. If the acreage is deficient the reports do not come until it is too late to plant—the farmers are powerless to make up the deficiency. If the reports indicate a heavy crop and an unusual surplus, the knowledge can be of no benefit to the farmers, for they have nothing to do with making the price. If the reports indicate a poor crop and a scant supply, the farmers can not help it, for it is too late for them to make an increase, and, as they do not make prices, the information can be of no benefit to them.

But all this is the very information the price makers and buyers are eager for. When the government informs them that acreage is reduced or that yield is to be light, up goes the price charged consumers for what has been bought and is held in store. On the other hand, if the reports indicate a bumper crop, down goes the price offered the farmers for what they may

not yet have sold. As proof of who is most interested in these reports we may note that the trade journals patronized by the boards of trade and exchanges are most eager to get and publish them. It is charged that there are cases where these interests have paid large sums to get the substance of these reports in advance of their official publication.

These effects on price and trade and lack of benefits to the farmers can not be denied, and it seems to be a fact that in this the Department of Agriculture has reached far out to other interests than those of agriculture, and to its detriment.

It was not always so, and that was not the purpose of the Department when it was created. The writer of this article was well acquainted with the first secretary of agriculture, Col. Colman of St. Louis, who held that the Department was established to serve and benefit agriculture, to the improvement of farming, and to help the farmers to become successful business men, and thus take their proper place among the business interests of the world.

We think, however, it goes in some things too far beyond that. The crop reports, under present conditions of marketing, we believe are actually harmful in that they affect prices unfavorable to the farmers, and without corresponding benefits to consumers. A change in the business methods of

The Farmer Suffers When Prices Tumble

farmers would reverse all this. If the farmers would control their business as other lines of business control theirs, then these crop reports, just as they are issued now, could be of the very greatest benefit to them, and the class that is now so much benefited by them, and that so eagerly seeks them, would be powerless to use them to the hurt of the producer or consumer. When the farmers, even in a measure, control the price and sale of what they produce from the soil, then will they be eager for the crop reports, and will be benefited by them. Then the farmers, as the greatest business class of the country, the wealth creators of the world, will stand back of the Department of Agriculture and will not care then how wide a field their national department covers.

What Others Say and What We Think of It

"We should pick our cows to produce milk."—E. E. Rockwood, dairyman, of California. And we pick our geese to produce feather beds. Take your pick.

"Labor income is what a farmer gets after paying rent and interest on his investment."—Farm and Fireside. Some of us don't get any labor income, according to that.

The Oklahoma Farmer tells us of a broken-down preacher who had to give up the ministry, took to farming and made a success at it. There are probably a whole lot of good farmers spoiled to make poor preachers.

"It is time to build. It is time to unite. It is time for faith. It is time for brotherhood. Co-operation is the law of life and growth."—Elbert Hubbard. The Fra is not as visionary as some people seem to think.

"The marketing problem is, without question, one of the most serious that the farmer has been called upon to solve."—Farm, Stock and Home. The problem is serious, but the solution is simple. As Berton Braley says, "Get together; that's the answer, get together."

"With the money annually wasted by Congress every farmer boy could be given an agricultural education that would fit him for his life work, to the added pleasure and profit for himself and the betterment of society generally."—Congressman S. R. Sells of Tennessee. This is something, reader, that we want you to think about.

"It is impossible to put the finger on any one thing and say 'This is responsible for the high cost of living.' A hundred factors enter into the problem. But it is not without reason to say that one of the most important factors; if not, indeed, the most important factor is the highly expensive system of retailing for which the public is chiefly responsible."—Sioux City Tribune. No one could state the facts more forcibly, nor completely, except to say that the exorbitant cost of retailing begins at the farm yard gate.

EDITORIAL

Large Crops or Small

WHY do farmers farm? Why do men, and families we may say, devote their lives to plowing, planting, cultivating and harvesting crops? They do it for the same reason that lawyers, doctors, merchants, manufacturers and others devote themselves to a certain line of work. It is their chosen life business.

For years teachers of farmers have urged them to produce more stuff. Bigger crops is their constant slogan. The press has urged it, the colleges have taught it, benevolent people and corporations have offered to give millions to help them do it, the railroads have run trains to encourage them in it, and the national and state governments send experts to show them how. We ourselves want every acre to produce to the utmost, and we also want farming to be a paying business, to bring as its results cash as well as produce. But we have another purpose also, and that purpose is to show the inconsistency of those who are continually urging greater crops, increased production, without the least regard as to the financial reward the larger crops should bring, without a single thought or expression as to what shall be done with the surplus, or whether farming will thus be made a greater or a less profitable business.

Have the farmers been producing enough? There has, perhaps, not been a year within the memory of those living when farm products have not been shipped abroad to be sold in the markets of other countries. This shipment has not been done by the farmers, but by those who trade in farm products for profit. If our home people's wants have not been supplied it has not been the fault of the farmers, not for lack of production, but because speculators bought up the stuff at the lowest possible prices and sent it away. This fact is ignored by those who are everlastingly teaching that the farmers must produce more to supply the needs of this country's population.

Bumper crops, excessively large crops, are worth less in the aggregate, bring the farmer less money, than the moderate or average crops. It is so in nearly every case, because increased surpluses reduce the price and though the farmers must handle more and market more they get less for it. This fact has for years been shown by official figures. In his recent report Secretary Houston says:

"However desirable increased production on farms may appear to be from the consumer's standpoint, it does not follow that such increased production would result in any increase in the cash income per farm or per capita of farm population. When the price of farm products can be maintained at a higher level without increasing the cost to consumers, farmers will be justified in increasing the output of their farms."

That is the point we make exactly. See to it that a profitable use be made of the surplus, and that the farmers get a just reward for having produced it. This condition is totally ignored

by the "big crop teachers." We are not working for a farmer here and there, but for the farmers as a class. We are tired of seeing fruit rotting under the trees though people elsewhere may want and need it. We are tired of seeing car loads of stuff that had been sent to central markets turned back out of the cities and destroyed because unloading it would make such a surplus that would force down the speculators' extortionate prices. We are tired of hearing the boards of trade and exchanges cry down the prices to farmers because too much had been produced and then constantly urge them to produce more.

All these things "the better-farming-increased-production teachers" stubbornly ignore. Their teaching is, in effect, "No matter what price you get for it, or what becomes of it, increase your acre production." Such teaching

price will be reduced by the speculative price makers, and the added 34,000,000 bushels must not be estimated at the prices paid for the ordinary smaller crops, and the reduction of price will be on the entire crop as well as on the increase, thus making the large crop worth less to the farmers than the smaller crops were worth. Statistics are full of just such cases and we do not see why writers and teachers do not take that into consideration.

Must farmers plant bad seed, then, so as to insure smaller crops? No indeed. Take the Department's advice and plant none but the very best seed, but protect yourselves against unwarranted reductions in price and make your surplus profitable. Production of every crop should be increased sufficiently to meet the demand and we are quite sure the demand may be increased by better marketing and more perfect distribution. The farmers could and should receive more, and consumers could and should have more and pay less. The ignoring of this is what we object to in public instructors. If they would give this feature of farming the same study they do the production side of it, and teach it with the same persistence, how quickly could it be established!

The High Cost of Living Problem

At Home With Wife and—

At DeMoneygoes' Cafe

never can result in improving farming as a whole financially, because it is one-sided in its doctrine and discouraging in its effects. Farmers can not increase their production for less money. Teach them first how to dispose of their stuff at a profit, guarantee to them reliable and remunerative prices, and then they will run after you for your scientific methods for increased yields.

We allow no one to go beyond us in the advocacy of good farming, of increased yields and big crops, but we wish first to know that they will be profitable to the farmers. This can be made sure by better marketing and distribution. By the Equity System, if you please. Therefore, our slogan is "Big crops and profitable prices for them." Big crops alone must necessarily be a financial failure unless profitable prices are obtained for them, and that is why those who teach increased production alone have made such slow progress. We are glad those in high places are beginning to see things in the right light.

Increased Crops and Value

WE HAVE certainly made it very clear that we are not opposed to increased production and big crops. We want every acre to be made more productive than it is, and we want such farming as will make it yield to its utmost capacity. Very recently the national Department of Agriculture, in very properly urging farmers to plant none but the very best seed potatoes, and giving excellent advice as to how to do that, makes the following declaration as an argument in favor of planting only good seed:

A conservative estimate of the increase that might be expected from the use of high-grade seed is certainly not less than 10 per cent. Such an increase, based on the average production of the past five years, would amount to over 34,000,000 bushels, having an approximate value of \$21,000,000.

We entirely favor the argument for good seed, and we suppose the increase in production to be attained thereby is not at all overdrawn, but the increase in value is entirely unwarranted. The value depends on price, not bushels. Add 34,000,000 bushels to each year's crop of potatoes and any thoughtful farmer, saying nothing of teachers and intelligent officials, must know that the

An H. C. L. Bill of Fare

AT LAST we have discovered the headquarters of the High Cost of Living. From a bill of fare of the New Willard Hotel, the leading hostelry of Washington, D. C., we find prices that would immediately destroy the appetite of a hungry man of limited means. We will not quote the "fancy dishes," because we don't know what they are. We give the plain, "substantial" foods:

A plate of oysters.....	\$0.40
An order of fish (shad).....	1.75
An order of chicken.....	1.00
An order of young duck.....	1.50
An order of pork chops.....	.40
An order of eggs.....	.50
An order of roast beef.....	.50
An order of potatoes.....	.25
An order of asparagus.....	1.25
An order of spinach.....	.35
An order of green peas.....	.45
An order of string beans.....	.45
An order of pie.....	.25
An order of ice cream.....	.30
An order of jelly.....	.20
An order of strawberries.....	.60
A cup of coffee.....	.20
A piece of cake.....	.15

If one of our readers were to sit at a table in this hotel and order a good, old-fashioned Sunday dinner, such as his good wife dishes up every Sunday, what would it cost him? Let us see:

Chicken, \$1; potatoes, 25 cents; green peas, 45 cents; greens (spinach), 35 cents; a cup of coffee, 20 cents; pie, cake and jelly, 60 cents; total, \$2.85. (And we only assume that the hotel would supply bread and butter with the meal.)

If the aforesaid reader wanted to have one meal of the dishes such as the fine-haired gentlemen of the "upper class" eat, just to see what it is like, his order would run something like this:

Belugia Caviar, \$2; turtle soup, 60 cents; diamond-backed terrapin, \$3.25; hothouse asparagus, \$1.25; avocado salad, 60 cents; and for dessert, hothouse grapes at \$1.50, a bottle of champagne at \$5 and a Habana cigar at 50 cents; total, \$14.70.

And for the headache, stomach ache and indigestion he would likely get, not being used to high living, that would be thrown in without charge.

Of course, no one imagines that these prices are charged for what is eaten. It is not the food, but the service, that costs the high-lifer. If our aforesaid reader doubts this, let him go right around the corner, under the very shadow of this hotel, and take a seat at the neat, clean cafe he will find there and for 25 cents he can purchase all he can eat of good "grub," well cooked.

There is, without question, a high-cost-of-living problem, but it is a matter of choice. And the farmers are not responsible to this nation for the follies of its fools. Besides, lower prices to farmers would not change things one iota, except to add extra profits to the dealers.

Smile Awhile

Not Sure of the Variety

Stranger—I see you have a fine lot of chickens. Have you incubators?
Girl (just home from college)—I am not sure, but I think they are some kind of Rocks.

Wanted to Be Obliging

"My son, it is a great deal easier to make money than it is to spend it wisely."
"All right, father, let me do the hard part of it."

Was Gainer

"I tell you I had a narrow escape when that building burned last night, but I got more than I left."
"What did you get?"
"Religion."

A Sense of Relief

Daughter (playing the piano)—Father, this is a song that will live forever.
Father—Then I'm glad I won't.

Found a Substitute

Mother—Where is the switch I sent you for?
Son—I couldn't find any switch, but here is a little rock you can fling at me.

Got Beyond It

"Has your son really given up farming?"
"I guess so. He has gone off to an agricultural college."

Excelled at That

Lucy—You could never dream the number of proposals I have had this winter.
Katie—No, you could always beat me dreaming.

Of Course

"Mother, may I have anything I want?"
"Yes, dear, if you don't want something you mustn't have."

Needed Help

Farmer—I want an expert to come out to my farm.
Secretary of Agriculture—All right. What can we do for you?
Farmer—I want more eggs and less cackle.

Use for a Christmas Tree

Wife—What can we do with that old Christmas tree? I am tired seeing it out there in the back yard.
Husband—I thought may be you could use it on your new hat!

Close-Fisted

"Kinsley is sure a miser."
"What now?"
"He won't even laugh at a joke if it is at his expense."

Still in Debt

"What a debt we owe to medical science," exclaimed the husband as he laid down the paper, in which he had been reading some of the scientific achievements.
"My goodness!" exclaimed his wife, haven't you paid that doctor bill yet?"

Absent-Minded

"Are you really in love, Bill?"
"Don't know, Jim. Haven't had my paper today."

Understood It

"What did you think of Bill's snake story?"
"It was sure a rattler."

Had Adjourned

"What luck did you have fishing today?"
"None at all. The schools were all out."

The Problem of the Farmer's Home

Illustrations by Staff Photographer
Charles Dawson, Osceola, Iowa

House, Barn and Silo of H. S. Hall, Trenton, Mo.

Modern Home of W. C. Crawford, Trenton, Mo.

Editor's Note—In the preparation of this article much valuable data was supplied by H. C. Solberg of South Dakota State College.

IF THERE is one condition that needs encouragement more than any other at the present time, it is the improvement of conditions of home life on the farm. Really one of the greatest problems confronting the people of America today is to devise plans to keep on our farms more of the ambitious, energetic, brainy boys and men, who for years past have been going to town and city at an alarming rate. It is neither possible nor desirable to stem this tide absolutely. The welfare of this country depends much upon the infusion into city life and business of the new blood from the country, with fresh, wholesome ideas and ideals. Nothing else can hold together the bonds between country and town, in sympathy and understanding. But the development of the country is a wonderful work. To build up our agriculture, not only each farm as a unit, but the whole stupendous industry, with its many important problems of production, marketing, good roads, higher civilization, social and educational training and development, calls for ability and enterprise of no mean order. The intelligence and ambition which has built our great cities with their wonderful developments, electrically lighted and operated, with marvelous facilities for doing things; the brains and business ability which builds and operates railroads, big business and the institutions of learning, the libraries and the parks—all this is done mostly by country-bred brain and brawn, and this same intelligence and industry, applied to the problems of country life, could make a miraculous change there and build up agriculture in a marvelous way. Conditions of country life would then become such that it would be more to be desired than any other. The farmer would hold an enviable position. The farmers of America would become a world power, a greater civilizing and equalizing force than the world has ever known. He would become the ruling power of government. He would supply the citizens of the towns with an abundance of the necessities and liberally of the luxuries of life and will make himself honored and respected for it. On the other hand, if the bright minds and budding ambitions continue to leave these agricultural problems for those of commerce and profession, it means that the city will continue to hold the whip

hand over the country; that agriculture will continue to be in a dwarfed, impotent condition; that production will fail to keep up with the growing demands of the population, and our gates, by necessity, be opened and kept open to the producers of foreign countries, and our farmers be forced to the level of the peasantry of Europe, and the serfdom of Russia. Agriculture must go forward or backward. The way to make it go forward is to devise, as was said in the beginning, a plan to keep a large proportion of the bright minds and ambitious characters on the farms.

Statesmen have seen this need, and have groped about for a remedy. They have failed to check the rural exodus because they could only advise that the life on the farm be made more desirable, and were not able to supply the means to make it so. It is not enough to tell a farmer to build fine houses and barns, buy blooded stock, all modern machinery and appliances, and thus make farm life attractive. The money to buy with is a most important consideration. If we are to keep the folks on the farms who have the ability to build up agriculture, we must keep there the boys with the ability to make money in town, and ability will always go where there is opportunity. Right here is the key to the solution of the whole problem: To keep ability on the farm it must be given opportunity to earn satisfactory rewards. Farmers, after they have produced crops, must sell them

profitably. Not until then will the money to make a farm home and rural community life what it should be be forthcoming.

Many things have been done to better country life, and it has been bettered, but still the stream of humanity flows to the cities. Not enough has been done. Agricultural colleges have done and are doing all that colleges can; the rural telephone, the free mail delivery, the parcel post, all are doing something, all that can be expected of them, yet the most important things remain to be done to make living in the country attractive, pleasurable and satisfying. To accomplish one very important thing is to construct residences and buildings with all modern conveniences.

There is a vast number of farms throughout the central west, with magnificent barns, including conveniences of all kinds for handling the stock, large and convenient granaries and machinery of all kinds about the place for doing farm work. But when it comes to the home it is mostly without conveniences of any kind whatsoever. The result is that the life of the women on the farm is unnecessarily made a continuous hardship. The water supply is usually very much closer to the barn than to the house. There is no machinery for doing house work of any kind. Because of lack of any toilet conveniences, the wife and children are compelled to expose themselves in poorly constructed outhouses

to the most severe weather conditions during the long and stormy winter season, a condition that is well nigh unbearable even to a strong person, to say nothing about subjecting a person in delicate health to such treatment. This unbearable state of affairs soon becomes a horror so strong that neither wealth nor other advantages can counterbalance it. The final result is that as soon as sufficient money is accumulated, so that the farmer, by practicing strict economy, can get along on the rent or income, he leaves the farm and moves into the city, where generally he becomes a non-producer of wealth, in order that his wife may escape some of the hardships incidental to life on the farm.

The boys, quick to see into things, are thus taught to look upon the farm as a place where one must work hard, under adverse circumstances, undergoing hardship and deprivation, until they can make enough and save enough to go to town and obtain more of the things of comfort and convenience. They decide to go to town also, and enjoy life as they go along.

Upon inquiry among a large number of farmers as to the reason why they left the farm, one is invariably met with the prompt answer that it was done in order to make life a little easier for the women. The farmers' wives prefer a small house in town with a few conveniences, even if hedged about with numerous restrictions, to living on a magnificent farm, with absolute freedom, because the farm home lacks a few of the conveniences that are so essential to comfort, but which can be installed for a very small sum of money when properly understood.

Up to the present time, with but a very few exceptions, the subject of modern conveniences in a farm home appears to be practically unknown to the farming population. But with the present engineering knowledge of sanitation the question is reduced to one of simply a few dollars and cents.

With a small gas-engine water can be pumped into a storage tank, electric lights can be generated and a great deal of other work performed. With the present knowledge of the septic system an absolutely safe and sanitary set of toilet and bath room fixtures can be installed for a few dollars, and the cost of maintenance will be very small. Where water is scarce a sanitary system of toilets can be installed that, by the use of a small quantity of chemicals, will obviate the use of a large quantity of water.

Modern Barn of J. N. Jeffries, Russell, Iowa

Beneficial Co-operation

I will take for my subject Co-operation. I am not writing especially for a prize, but to do good to my fellow man, and for this reason, in the way of introduction, will give a brief sketch of my life. I was born in southern Missouri, and removed with my parents to Sulphur Springs, Hopkins county, Texas, during the civil war, in which I have spent the most of my life.

My motto from early life has been the Golden Rule, and I want to do all the good I can in this world. I am a farmer from choice.

Through the influence of my father and mother I joined the Grange in 1879 at 19 years of age, and became greatly interested in the co-operation of the farmers, have helped along that line at every opportunity since.

The most important thing that I learned in my school days was the discipline of mind, to actually solve a problem before I quit it; that has been a great help to me through life. So I am a school boy yet, and have always tried to solve the problems of life as they come. Not to a selfish end, but for the betterment of mankind.

Co-operation was one of the problems to solve. Self-protection taught me the necessity of a solution.

The co-operative teaching of the Grange helped me to decide on my vocation of life. Though the Grange is dead in Texas, it did a great work.

There have been other farmers' organizations started in Texas since the Grange went down, that have all done great good.

We now have hundreds of co-operative business enterprises and local organizations, such as gins, oil mills, and associations for buying the farmers' produce and for selling to him such things as he may need.

The truck and fruit growers association is also a fine thing, but I have recently been deprived of the benefits of it by moving to a country that doesn't have it.

So I have decided to get busy along lines, and try to get something started where I am.

I can remember when Texas had no railroads and the farmers and stock men either hauled or drove their stuff to the nearest water shipping point to market it, which was several hundred miles, and still in this advanced age of civilization I sometimes hear men wishing for the good old times when they were young.

But the thing we need is co-operation. If the organized moneyed interests of our country charge too much for handling our produce, or the railroads charge too much for transportation, the telegraph and telephone companies' rates are too high, the producer and consumer by co-operation can adjust all these things.

I don't want the government mixed up with the farmers' business any more than to see that we all have justice, so I can heartily endorse the F. S. E.'s great central idea on co-operation.

I have some interesting work in a local way of actually doing things, and accomplishing results that I would like to write about later.—J. C. Garrison, Tehuacana, Texas.

Breed Good Hogs

Pork can be marketed in many forms—fresh pork, hams, bacon and sausage—and can be produced so as to sell much cheaper than beef. A shortage of beef means an increased demand for pork, and it seems reasonable that there should be a ready demand for all the available supply. This means money in the pocket of the hog raiser. Some of the points which the hog grower should bear in mind are the following:

1. The feeding and care are as important as the breeding in producing a good hog. Plenty of feed and good care may make a good hog out of a runt, but lack of it will always make a runt out of a good pig.

2. To make pork cheaply a permanent pasture and forage crops must be used.
3. Young pigs must have a dry bed and plenty of sunshine.
4. Begin feeding the pig as soon as he will eat, and keep him growing until he is mature.
5. Always keep plenty of clean, fresh water where the hogs may drink at any time.
6. Quarantine all newly purchased animals for three weeks.
7. Never keep a female for a brood sow, no matter how well bred she may be, if she will not produce more than four strong pigs at a litter.
8. The more milk a sow will give the faster her pigs will grow.
9. Lice prevent a hog from doing well.
10. Always keep a mixture of charcoal, wood ashes, lime, sulphur, salt and copperas before the hogs.
11. Do not have hog lots next to highways, railroads or streams. If your neighbor's hogs have cholera do not allow any one from his farm to visit your farm, and

especially your hog lot or pens, and keep away from your neighbor's hog lot, whether his hogs have cholera or not.

12. Do not keep pigeons or allow them to alight on your premises.
 13. Keep away crows and buzzards.
 14. Avoid every possible way of carrying cholera infection to your hogs.
- "An ounce of prevention is worth a pound of cure" is an old saying, but in this case it is everything.

Learn how to judge hogs and to select them for breeding or market purposes. Also learn practical ways in the management, feeding, sanitation, and prevention of diseases of swine, all of which will prove valuable and you will come to realize sooner or later that farm life has its interesting side, and that success in the farming business is well worth while.

"I HAVE QUIT WORRYING About What To Give My Hogs To Keep Them Healthy And Growing"

....."I use MERRY WAR POWDERED LYE regularly twice a day in the feed for my hogs. I have quit worrying about what to give my hogs to keep them healthy and growing. After two years use of MERRY WAR POWDERED LYE for hogs I am thoroughly convinced hogs cannot be sick when fed regularly on MERRY WAR POWDERED LYE, according to directions..... I have lost five shoats in two years and that was at two different times. I got careless and quit feeding MERRY WAR POWDERED LYE. I can see a big difference in my hogs after feeding MERRY WAR POWDERED LYE three to five days. Their appetites get very keen and their hair takes on a smooth, glossy look which every one familiar with hogs recognizes as a sure sign of healthfulness. It is the most convenient, cheapest and surest preventive of hog ailments known". (Signed) H. H. Green, R. R. No. 4, Miami Oklahoma. (We guarantee this letter absolutely genuine. E. Myers Lye Company.)

Merry War POWDERED Lye Costs Only 5c per Hog, per Month, to Feed Regularly, Twice Each Day

A 10c can of Merry War POWDERED Lye contains 120 feeds—enough to keep a hog in prime condition for 2 months. For sale at most druggists, grocers and feed dealers. It is convenient to buy in case lots, 4 dozen cans, \$4.80, at which price we will ship it to you direct, prepaid, if your dealers won't supply you. When ordering send us your dealers' names.

Don't Take Chances Putting Anything Claimed To Be "Just As Good" In Your Hogs' Stomachs

Don't make doubtful and perhaps dangerous experiments with "any old lye". Merry War POWDERED Lye has been proven—its use is not an experiment—when used according to simple directions it will not hurt your hogs and is safe to use. Let us send you free our valuable booklet "How to Get the Biggest Profits from Hog Raising".

GET MY BIG FREE BOOK

OF "BLUE GRASS" BUGGY BARGAINS

THE D. T. BOHON CO.
HARRDSBURG, KENTUCKY

All I need is your name and address. Just drop me a postal card—and the first possible mail will bring you this great, big, handsome book—the finest buggy book ever issued by anybody. It is printed in colors, and describes and illustrates more buggies and harness, carts, surreys, runabouts, etc., than you can find in 20 dealers' stores. It tells all about how "Blue Grass" Buggies are built—tells how I can make for you just what you want—style, color, upholstery, etc. It explains my plan of

30 DAY ROAD TRIAL AND UNLIMITED GUARANTEE under which I will send you any buggy or harness I have to try for 30 days on your own roads, and if not in every way satisfactory the buggy is mine and the money is yours, and I will pay the freight both ways besides. It tells about \$30,000 Guarantee Bond, but best of all it proves that when you buy from me you

Save \$25 to \$50.

You see, this book is the only salesman I have. By sending it at a cost of only a few cents postage and dealing with you direct, I cut out all profits, wages and expenses of jobbers, salesmen, dealers, etc. I make just as much profit as if I sold the dealer, but all this big saving goes to you—that's why I can sell you a better buggy for less money than any dealer on earth.

Send for the Book Today

Even if you don't think you are going to buy a buggy this year. Now don't put it off—you might forget it—but send me that postal card right NOW.

D. T. BOHON,
1430 Main St., Harrodsburg, Ky.

The Problem of the Farmer's House

(Continued From Page 5)

Hence the installation of modern conveniences in a farm home will be no more difficult or expensive than the same conveniences in a city home. Lack of information concerning a subject of so vital importance to life on the farm is due to the one-sided education furnished by the forces that have been at work in the past.

During the last few years the subject of good roads has received a great deal of attention. At first the progress along this line was very slow, but through a persistent educational campaign the farmers are beginning to realize the value of good roads, hence they are now taking an active part in road construction. An improved system of roads in the rural districts, together with the automobile, will in a large measure do away with the loneliness incidental to farm life, by making it possible for the women to visit one another more frequently than formerly. According to statistics compiled by experts, the largest percentage of insanity at the present time is developed in the rural districts and is caused by the awful loneliness or isolation incidental to farm life. With good roads and the automobile, farms ten miles apart will for all intents and purposes of social life be as near together in the future as farms one mile apart have been in the past. In the same manner a farm ten miles out in the country will be no farther from the market or social center than a house in a large city ten miles out from the business section of that city.

The rural mail delivery, the telephone, good roads, and the automobile all combine to annihilate distances. This will also enable the consolidation of the rural schools to be brought about and will bring them up to the standard of the city schools. The last condition remaining for making the farm home equal to or better than the city home is the installation of modern conveniences, consisting of a heating system, water supply, toilet and bath, room, power washing machine and lighting plant. All these can be installed for a few hundred dollars.

The farm home will then become the ideal home—a home where bodily strength, manhood and character can be developed to the highest standard of perfection, free from the contaminating evils that are rampant in the larger centers of population.

Not only that, but such surroundings will make better farmers and more productive farms.

Publisher, Equity Pub. Co.....	Indianapolis

Owners (if a corporation, give names and addresses of stockholders holding one per cent or more of total amount of stock):

J. A. Everitt, S. F. Everitt, both of Indianapolis, Ind. There are also twenty-nine other stockholders, each owning less than one per cent of the capital stock.

Known bondholders, mortgagees and other security holders holding one per cent or more of total amount of bonds, mortgages, or other securities:

The Equity Publishing Company has no bonds or mortgages.

S. F. EVERITT, Business Manager.

Sworn to and subscribed before me this 14th day of March, 1914.

(SEAL) HENRY H. PRESCOTT, Notary Public.

My commission expires January 26, 1918.

Perhaps Not

Quibber—I guess it is true that all signs fall in dry weather.

Fibber—I'm not sure of that. It is seldom a wink to a druggist falls in a dry town.

It Wasn't Lost

Wife—Thomas, I'm awfully worried. My wedding ring has slipped off my finger and I can't find it anywhere.

Husband—You needn't worry. I found it in the pocket I keep my money in.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

A SUCCESS AND A FAILURE (Awarded First Prize of \$3)

People fail, not because it is not in their power to succeed, but because they are not led to think and act along successful lines. Witness this true story, taken from life, as it came under my observation:

Twenty-five years ago two young men, equally equipped with health, and but little else, began to make their own way by farming. Each bought, at about the same price, forty acres of land, adjoining, and it was good land, well located. Both young men were intelligent and about equally endowed with ability to "do what came to hand." Both were "handy with tools." So they began even. Their land was in timber. They cleared the land and builded humble homes. Then one of the boys married, but the other did not, and is single to this day.

The first few years' crops did well for these young farmers, for the land was very rich. But after a while there came to be seen a noticeable difference between the two farms. The man with a wife and family was building more and better buildings, buying new and improved machinery, raising better stock, larger and more profitable crops. His farm was growing grass and grain abundantly, and he always had something to sell. The other was working as hard or harder, but his soil was being depleted, his crops yielding less each year, and now and then he was compelled to buy feed from his more thrifty neighbor, though he had far less stock. Though he had planted an orchard, he let it go to waste. Instead of buying new and improved machinery he frequented sales and bought old second-hand machinery; and bought many things he did not need and could not use to advantage. Little by little he got deeper in debt, and now he is an old man with a worn-out farm and a mortgage on it for more than it is worth.

The other has a farm finely improved, free from debt, has raised a large family and educated his children. His home life is full of pleasure and contentment. Possibly his success is due to the encouragement and help received from his good wife. Possibly it is due to his right thinking and careful study of his opportunities, but more probably it was due to all these things. With the proper encouragement the other would have done as well.

Brother farmer, if you are not doing as well as your neighbor, do not despair. You can, if you will. It is all in the management. You can learn the law of success and make it work for you just as profitably as it works for others. Others may have greater ability in some things, and so win a larger degree of success, but every man can make each year a step ahead, by gaining a little and holding his ground.

Give heed to this matter of management. It is worth your while.—Henry Anderson, Carney, Mich.

HOW I MARKET FOR GREATER PROFIT

(Awarded Second Prize of \$2)

I note in looking over the page written by "Our Country Contributors" much about raising profitable crops, but a scarcity of information as to how to sell them for the best price after they are safely housed, which is, after all, the chief aim of the farmer's business. An account of my own meth-

ods in disposing of my last crop of tobacco will be of interest and perhaps help others to realize more profit. If my story seems egotistical, it must be remembered that it is my own experience and that it is a story of success.

Farmers are now permitted to sell "unstemmed leaf tobacco in the natural state" (not manufactured or altered in any way) without payment of the revenue tax. It must be sold "exactly as cured on the farm, in the hand, and must not be manufactured by twisting, plaiting, sweetening, flavoring or any other process of manufacture."

So I retailed my own tobacco. I put it up in neat packages of half a dozen hands each and included a small vial of a flavoring mixture composed of simple household spices, so that the customer could flavor it to suit his own taste, and wrote out a few simple, easy-to-follow directions for working it up into cigars, chewing or smoking tobacco, and sold it in competition with the trust. It was good tobacco. The very fact that the Federal laws prohibited me from doing anything to it proved it pure and unadulterated. I sold it for a price about half way between what it would have brought in bulk on the market and what it would sell for in a store, and both myself and the customer were ahead. And, according to my ideas, that is the best way to do business. Unless buyer and seller both make money a trade is "N. G." The farmer must not, in selling direct to the consumer, expect the top city retail price, and neither must the consumer buying direct from the farmer expect to buy at the farm price of products in bulk. Split the difference. Let the farmer get something extra for his time, trouble, packing, delivery and enterprise and let the buyer save something for his willingness to buy direct from the producer.

I see no reason why many farmers should not keep a little stream of ready money coming in all through the year by methods of this kind, individually or by co-operation.

Williams Quality Harness

The steady growth of our harness store—now the largest in the country—is due only to the exceptionally *high quality* we offer, at prices asked elsewhere for *ordinary* grades.

We want you to know all about our harness store—the reasons for its success—and the values we are now enabled to offer. Turn to the harness pages of our big General Catalog—or, if you prefer, write us a postal card and we will mail our new book of harness, saddlery, blankets, fly nets, dusters, robes, trimmings, whips. This book also contains our complete line of buggies, implements, cream separators, gasoline engines, farm tools and other farm helps. If you want this new book free, simply write on a postal card "Send me your Harness Book No. 65U68."

IN THE face of an advancing leather market we still use the *genuine bark tanned leather* which has made *Williams Quality* mean the best in harness for the least money.

Our fair and square methods of manufacturing and selling create and hold in the minds of our customers the strictest confidence. Hundreds of horse owners who use harness daily will have none other than the celebrated *Williams Quality*.

Our guarantee proves our confidence in our merchandise, guards our customers against disappointment and protects them against loss.

Turn to the harness pages of our big General Catalog, or write for the special book mentioned at the left.

Sears, Roebuck and Co., Chicago

Let the Vermonter sell his maple sugar, the Floridian his early vegetables, the Michigander his celery etc., and let us swap with one another. I am very much interested in this subject of selling the consumer direct and would be glad to correspond direct with any readers of UP-TO-DATE FARMING who have had any experience in it, and exchange ideas.—Moss J. Beall, Cave City, Ky.

HAVANA FARM TRUCKS.

Both Steel or Wood Wheel. Especially adapted for farm purposes and coming into more general use every day on the roads, because of the wide tire. You will appreciate our free catalog. HAVANA METAL WHEEL CO., Box 82 HAVANA, ILL.

Phelps Great Buggy Book Is Now Ready to Mail

—Get Your Free Copy Now!

HERE is a book that will make you a master of buggy knowledge. It will be sent post paid, free. Read pages 7 to 11 and pages 24 to 32 for inside buggy making knowledge. Then no matter where you buy, you will know in detail just how a fine buggy should be made.

Remember, Phelps has built up an enormous business and has nearly 200,000 buggies running on American roads because he has stuck to fine second growth hickory in construction (split, not sawed) and has always made a big money saving proposition to the people.

Save \$25 to \$40 and Get 30 Days' Free Trial and Two Years' Guarantee

Get your buggy out on your own roads and try it now. Satisfy yourself. If you want a special job, Phelps will build that for you and still give you the trial and the guarantee. Phelps stays right in the factory himself. He sees the jobs done right and sent out right.

Get the Book Now

It is ready to mail and you might as well have your copy and be studying it. Then if you don't buy, Phelps won't be mad. He'll be glad you wrote for it anyway. Address him personally, H. C. Phelps, President.

THE HOG CHOLERA SERUM CONTROVERSY

There is a difference of opinion among farmers as to the efficiency and value of the serum treatment for hog cholera, and wherever there is difference of opinion there is argument. So we see, in some of the farm papers, a controversy on this subject.

We do not desire to extend this controversy in the columns of UP-TO-DATE FARMING. We believe the serum treatment is desirable, and in the great majority of cases, when properly made and administered, it is a valuable remedy and preventative of this dread disease, and can be made a most able agent in driving cholera out of existence. We believe this after closely studying all sides of the question. We find, as a rule, that those who claim it is a valuable remedy can back up their statements with unquestionable facts, while those who deny its usefulness and value rely upon unfounded opinions or take snap judgment of facts which are apparently against the treatment, but which, if thoroughly investigated, would disclose a justifiable reason for that particular failure—a reason not at all in contradiction to the efficacy of the genuine treatment properly administered.

It is true, of course, that some hogs having had the treatment succumb to the disease. It is also true that many people under the care of excellent physicians die in spite of the skill of the doctor. Some people do not believe in the serum treatment for cholera. Yet both doctors and serum occupy a very useful position in our affairs, and will continue to do so, regardless of the failures they meet now and then.

FEEDING THE YOUNG CALF

Many good farmers and dairymen do not let a new-born calf suck at all, but this is not always the best plan. Much depends upon the cow and the man.

Unless a man is willing and knows how to teach even stubborn calves to drink, without losing his patience, or starving and abusing the calf, or punishing the cow if she should be anxious about the calf and withhold her milk from the milker, it is probably best to prevent the calf from sucking at all.

If a cow is known to be of a disposition to withhold her milk from a milker, after weaning her calf from her, it is better not to allow the calf to suck.

In nearly every case, however, if the man knows how to rightly handle both cow and calf, it is better for the calf if it is permitted to suck for the first three days and then weaned.

Patience is all that is necessary (except kindness) to teach any calf to drink. Do not try until the youngster is hungry. Move it to a small, dark stall. Dip your fingers in warm, sweet milk and allow the calf to suck them. Gradually, gently, coax its muzzle to the milk. No matter if you are busy, and it takes an hour's time, it will pay to do this and all other work right.

After the calf is weaned, and drinks readily, give it plenty of fresh air, sunlight and pure water, but feed it sweet, warm, whole milk for at least ten days, preferably from its mother. Then it can be placed upon half whole milk and half skim milk rations. Still feed the milk warm, and keep up this ration until the calf is three weeks (21 days) old. The last four days mix a little bran with the milk.

After the twenty-first day all skim milk can be fed, but great care must now be taken. This is a critical point in the calf's life, and a misstep now will lose what can never be regained. Keep all buckets and troughs clean and sweet, scalding them twice each day, and where the sun can reach them with its germicidal and purifying rays.

In feeding all skim milk place a small handful of bran in the feed bucket and pour about a quart of boiling hot water over it. Then add your skim

milk fresh from the separator and feed at once.

In feeding and caring for calves, carelessness is costly. If you are in the business for profit remember that fact always.

DAIRY NOTES

Regularity is quite important in the care of the dairy herd.

For every three pounds of milk, feed one pound of grain.

Feeding, milking, watering and care of the stable should be done by the same persons at the same hour each day. Make your work systematic.

Falling off in the milk supply is due more to lack of food than to flies.

Pure-bred cows can be depended upon to transmit their qualities to their offspring. Scrubs can not.

Never feed a cow more hay or silage than she will eat at one time.

The man who doesn't make a silo pay either has the wrong kind of cows or isn't the right kind of a man to succeed, anyhow.

"Frequently good heifer calves can be bought for men who keep family cows in town and have no facility for raising the calves."—Exchange. But before taking a chance on them, learn something about the sire.

"Just because a calf is large and thrifty is no sign it will be a profit-

able cow."—Exchange. Quite so, but if it is not large and thrifty it's a pretty sure sign it will not be a profitable cow.

Here's a good dairy ration: Silage, 25 pounds; clover hay, 10 pounds; bran, 4 pounds, and corn, 4 pounds.

Here's another: Clover hay, 20 pounds; ground barley, 4 pounds; ground corn, 4½ pounds; ground oats, 1½ pounds. This is an excellent ration where barley is grown.

Still another excellent ration is: Timothy hay, 10 pounds; clover hay, 10 pounds; ground corn, 2 pounds; ground barley, 2 pounds; wheat middlings, 2 pounds. Each of these rations are one day's feeding for a cow, giving 25 pounds of milk daily.

A good grass pasture in summer is as perfect a balanced ration as a dairy cow needs. Little or no grain is required. But when grass is short grain is needed. The summer silo is the best safeguard against short pasture. Soiling crops are next best. Keeping up the milk flow keeps up the profit.

"Are you an agronomist?" asked a Chicago minister of a man he met in the stock yards. "No sir-ree," the farmer replied. "I'm a Baptist, a Democrat, a Free Mason, a gentleman and a farmer. I never heard of any agronomuses out our way." We think the farmer made a good reply.

DE LAVAL CREAM SEPARATORS

are the cheapest
as well as the best

LOOK AHEAD!

DON'T TRY TO SAVE \$10.00 TODAY if it means a loss of 25 cents a day for all the years a cream separator may last you.

THAT'S JUST WHAT YOU WILL do if you buy a cheap or inferior cream separator simply because its first price is a little less than that of the De Laval.

WHEN A PRUDENT MAN BUYS a cream separator he knows that what he is really paying for is not just so much iron, steel, brass and tin, whether it is called a separator or not.

WHAT HE WANTS IS A MACHINE to perform a certain service, and he must be sure of the machine doing the work for which it is intended as thoroughly and with as little effort as possible on his part.

THOUSANDS OF BABCOCK AND other tests have proved that the De Laval skims cleaner than any other cream separator under any conditions, and particularly under the harder conditions always experienced at times.

JUST THINK WHAT A LOSS OF as little as 10 cents worth of cream at each skimming means to you in a year—twice a day for 365 days—over \$70.00, and with as many as ten cows the cream losses alone from an inferior separator usually amount to more than this.

CREAMERYMEN, WHO ARE DEPENDENT on their separators for business success, have long since found out the difference between

De Laval and other separators, with the result that De Laval factory separators are almost universally used the world over today.

DE LAVAL SEPARATORS ARE identical in all sizes, for one cow or a thousand, and the differences between separators are just the same with the smallest machine and the largest. They mean as much relatively to the little as the big user.

THEN THERE IS THE SAVING IN labor because of the easier running and greater capacity of the De Laval over other machines and the less care required in cleaning and adjustment, worth at least 10 cents a day.

AND THERE IS THE INDISPUTABLE fact that a De Laval machine lasts from ten to twenty years as against an average of from two to five years in the case of other separators, or five times the average life of competitive machines.

THESE ARE THE REASONS WHY De Laval Separators are cheapest as well as best, why thousands of other machines are yearly being replaced with De Laval and why their use is rapidly becoming as universal on the farm as in the creamery.

IT SHOULD BE REMEMBERED, moreover, that if first cost is a serious consideration a De Laval Separator may be bought on such liberal terms that it will actually save and pay for itself, as many thousands of them have done.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write The Nearest main office, as below.

Forage Crops for Growing Pigs

FARMERS and pig growers do not always appreciate the value of green feeds and succulent pastures for their animals. Forage crops are especially beneficial to young growing animals. It is possible to grow them much more profitably and successfully when a good green field of palatable and nutritious pasturage is provided. Gains in weight are made at less cost on forage than in the dry lot. Brood sows can be carried through the season on pasture at less cost. Foraging induces the animal to exercise and obtain fresh air, and these help to prevent diseases being contracted, and when the animals are put in the fattening pen their gains are unusually rapid and profitable. The green feeds eaten are of much value just to keep the pig's digestive system in good condition and the appetite keen.

The entire hog herd can be run on forage crops and will profit by this method of management. Younger animals seem to derive the most benefit, and fattening hogs the least. Herd sows and the herd boar are benefited by having green feeds. It is a good plan to have the brood sow running on green pasture at farrowing time, as this is conducive to a strong, healthy litter of pigs. She should be kept on green forage from the time she farrows. The young pigs will soon learn to eat, and the exercise and the green food in its natural state will start them along in good condition.

The method of feeding when on pasture will necessarily vary according to the kind of crop used. If the crop grown be rape, alfalfa, clover, cow peas, soy beans or other crops high in protein content, the grain ration need not be supplemented by feeds high in protein. If blue grass, rye, oats or other non-leguminous crops are grown, it is best to add a small percentage of feeds high in protein to the grain. Corn or barley usually furnish the bulk of the grain ration, and when necessary these can be supplemented by adding one-tenth linseed-oil meal or one-sixteenth tankage. The rate of feeding will depend on the gains desired. Considering a full grain ration to be four pounds daily per 100 pounds live weight, we may say that for ordinary work with growing shoats a one-half grain ration, or two pounds a day for each 100 pounds live weight, will give satisfactory results. If it is desired to make faster gains a heavier grain ration can be used, and if it is desired to maintain the animals as cheaply as possible a smaller percentage should be fed.

It seems doubtful if it ever pays to try to keep pigs on forage crops alone. These crops are sometimes sufficient to keep the pigs growing, but the gains are not usually made economically. Where brood sows are kept they should be given enough grain to keep them in good, thrifty condition. The fact that the forage crops have high value when grains are fed does not mean that they should be fed alone.

The crops best adapted to grazing with pigs are alfalfa, rape, clover, blue grass, hemuda, rye, oats, soy beans and cow peas. The nature of the soil, the climate and the rainfall are influences that should govern the selection of the crops to be used. Alfalfa is the greatest forage crop on soils suited to its growth. Rape and clover are also excellent feeds, and both are high in protein, the element needed to balance ordinary grain feeds.

Now is the time to plan some fields to be sown to crops adapted to grazing. If permanent pastures are available, fence off a portion for the pigs and plant some crop to keep the pigs growing when the permanent pastures dry up, and the returns from the year's work with hogs will be proportionately increased. Give the pig an honest chance to make you money by giving

him green feeds in their natural state, and his growth, health and pork-making ability will be increased.

PROFIT IN SHEEP

For the past three years I have been a reader of your valuable paper and have been especially interested in the contributions from your country correspondents. I will tell of my success with a small flock of sheep. I purchased a poor hill farm of eighty acres. The land was badly washed and overgrown with briars. In May I bought twenty head of ewes. The wool had just been taken off. These sheep were of good quality, but old, and I paid \$2 a head for them. During the summer eighteen of them raised good, strong lambs. The following winter ten of the old ones died, leaving a flock of twenty-eight, of which eighteen were young. The wool from the entire flock when sold brought me just \$1 more than I paid for the flock in the beginning. But now I had eighteen young sheep and ten old ones, which stood me \$1 less than the cost of keeping them up to this time.

The cost of feeding the flock was very small, as I let them have full run of the fields during the entire winter, there being but little snow. They ate but little dry feed except a small amount of shelled corn each day.

Besides this they cleaned up the fields of briars and made the land much more valuable.

The flock increased rapidly, but I have sold the increase each year, keeping the number down to thirty.

The sheep sold each year, together with the wool, has cleared a net profit of 100 per cent annually on the original investment. In my estimation there is not a more profitable investment for a poor and run-down farm than a small flock of good sheep.—Quincy Leckrone, Royersford, Pa.

FEEDING AND FATTENING LAMBS

Silage, fed once or twice daily to lambs being fattened for market, reduces the cost of finishing and adds to the net profit.

Silage should be fed with great care or lambs will "go off their feed" and profits will be reduced.

Shelled corn, clover hay, cottonseed meal and corn silage makes an excellent ration.

Cottonseed meal is an excellent feed to put a quick "finish" on the lamb.

Oats have been found a food far inferior to corn as a lamb ration. Corn alone is better than mixed corn and oats.

An open shed is better, as a rule, for fattening lambs than even a well-ventilated barn, bringing higher prices on account of their superior appearance.

Shearing has no effect on gains or profits, except when shorn the lambs require no dipping. The extra weight of fleece will usually more than balance that expense.
